Introduction	XI
------------------------	----

Angela D. Friederici and Randolph Menzel

I. Rule Acquisition and Representation of Structured and Unstructured Information

1. Words as Programs of Mental Computation

Manfred Bierwisch

1.1	Language as a Species Specific Capacity – Conceptually Necessary Assumptions	3
1.2	Structure and Interpretation of Linguistic Representations	7
1.3	Lexical Items and the Combinatorial Principles of I–Language	14
1.4	Further Computational Aspects of Linguistic Expressions	24
1.5	Summary and Perspectives	32

2. Discovering Grammar: Prosodic and Morpho-Syntactic Aspects of Rule Formation in First Language Acquisition

Barbara Höhle and Jürgen Weissenborn

2.1	Introduction	37
2.2	The Prosodic Bootstrapping Account	41
2.2.1	Prosodic Information as a Cue to Syntax	41
2.2.2	Children’s Sensitivity to Prosodic Information	43
2.2.3	Prosodic Information in Children’s Speech Processing	44
2.2.4	Limits of Prosodic Bootstrapping	46
2.3	Distributional Learning in the Acquisition of Morpho-Syntax	48
2.3.1	Non-Prosodic Distributional Information as a Cue to Syntax	48
2.3.2	Children’s Sensitivity to Non-Prosodic Information	49
2.3.3	Closed-class elements as early anchorpoints for segmentation and classification	52
2.3.4	Sensitivity to Closed-Class Elements in Preverbal Children	54

2.3.5	Sensitivity to Syntactic Restrictions Associated with Closed-Class Elements	57
2.4	Conclusions	61
	References	63

3. Rule-Application During Language Comprehension in the Adult and the Child

Anja Hahne and Angela D. Friederici

3.1	Introduction	71
3.2	ERPs as a Method for Examining Language Comprehension Processes	72
3.3	ERPs and Semantic Processing	72
3.4	ERPs and Syntactic Processing	74
3.4.1	P600	74
3.4.2	Left Anterior Negativities	75
3.4.2.1	Influence of proportion	75
3.4.2.2	Influence of semantics	77
3.4.2.3	Influence of task	78
3.4.2.4	Influence of syntactic preferences	80
3.4.2.5	Influence of prosody	81
3.4.3	A Neurocognitive Model of Language Comprehension	84
3.5	ERPs in Language Development	85
	References	86

4. Learning, Representation and Retrieval of Rule-Related Knowledge in the Song System of Birds

Dietmar Todt, Henrike Hultsch and Roger Mundry

4.1	Introduction	89
4.2	Song Learning: Acquisition of Rule-Related Knowledge	91
4.2.1	Methodological Aspects	92
4.2.2	Discontinuous versus Incremental Processes	93
4.2.3	Preordained Knowledge: Acquisition of Song Structure	96
4.2.4	Hierarchical Organization: Implementation of Levels	100
4.2.5	Extraction of Cues Encoded in a Learning Design	101
4.3	Retrieval of Rule-Related Knowledge: Evidence from Song Performance	103
4.3.1	Rules reflected by trajectories of song development	104
4.3.2	Repertoire Modification: Open versus Closed Processes	105
4.3.3	Experimental Examination of Song Retrieval in Adult Birds	106
4.4	Conclusions: Processing of Rule-Related Knowledge in a Songbird	108
4.4.1	Song Acquisition and Memory Mechanisms	108
4.4.2	Hierarchical Representation Format and Retrieval Rules	109
4.4.3	Comparative Aspects	110
	References	111

5. Representation and Learning of Structure in Perceptuo-Motor Event-Sequences

Jascha Rüsseler and Frank Rösler

5.1	Introduction	117
5.2	The SRT-Learning Task	118
5.2.1	Awareness of Stimulus-Structure in the SRT-Task	118
5.3	Neural Representation of Sequence Knowledge	121
5.3.1	Sequence Learning in Subjects with Explicit Memory Deficits	121
5.3.2	Sequence Learning in Patients with Striatal Dysfunction	122
5.3.3	Neuroimaging Studies of Sequence Learning	123
5.4	Theoretical Accounts of Implicit Sequence Learning	125
5.4.1	Attentional versus Non-Attentional Learning Mechanisms	125
5.4.2	Role of Perceptual and Motor Processes in Serial Learning	126
5.4.2.1	ERP-correlates of stimulus evaluation processes	128
5.4.2.2	ERP-correlates of response preparation	129
5.4.2.3	ERP-studies of sequence learning	130
5.4.3	Connectionist Models of Sequence Learning	133
5.5	Conclusions	133
	References	134

6. Imposing Structure on an Unstructured Environment: Ontogenetic Changes in the Ability to Form Rules of Behavior Under Conditions of Low Environmental Predictability

Peter A. Frensch, Ulman Lindenberger and Jutta Kray

6.1	Introduction	139
6.2	The Concept of Cognitive Control	140
6.2.1	The Psychological Reality of Cognitive Control	141
6.2.1.1	Psychological support	142
6.2.1.2	Neuropsychological support	143
6.3	Age Differences in Cognitive Control	145
6.3.1	Frontal-Lobe Development	145
6.3.2	Coordination and Separation	145
6.3.3	Inhibition and Monitoring	147
6.3.4	Summary	147
6.4	Age-Related Changes in the Ability to Form Rules of Behavior Under Conditions of Low Environmental Predictability	148
6.4.1	The Continuous Monitoring Task	148
6.4.2	The Measurement of Monitoring Accuracy	149
6.4.3	Design of Experiment	150
6.4.4	Characteristics of Sample	151
6.4.5	Main Findings	152

6.5	Are Age Differences in Fluid Intelligence Predictive of Age Differences in the Ability to Generate Rules of Behavior under Conditions of Low Environmental Structure?	154
6.6	Summary and Conclusions	156
	References	158

II. Perception and Representation of Visual-Spatial and Temporal Information

7. Motion Perception and Motion Imagery: New Evidence of Constructive Brain Processes from Functional Magnetic Resonance Imaging Studies

Rainer Goebel, Lars Muckli and Wolf Singer

7.1	Introduction	165
7.1.1	Two Main Visual Processing Pathways	165
7.1.2	Functional Magnetic Resonance Imaging	166
7.1.3	Methodological Details of the fMRI Measurements	167
7.2	fMRI Experiments	169
7.2.1	Apparent Motion	170
7.2.2	Motion Imagery	173
7.2.3	Perception of Transparent Motion	178
7.3	Conclusions	182
	References	183

8. Recognition Memory of Objects and Spatial Locations: Figural and Verbal Representations

Axel Mecklinger and Volker Bosch

8.1	Introduction	187
8.1.1	Figural and Verbal Representational Codes	188
8.1.2	The ERP Approach	189
8.2	Recognition of Familiar Objects and Spatial Locations Based on Pictures and Words	190
8.2.1	Methods	191
8.2.1.1	Subjects	191
8.2.1.2	Stimuli	191
8.2.1.3	Procedure	192
8.2.1.4	EEG recording and statistical analyses	192
8.2.2	Results	193
8.2.2.1	Behavioral data	193
8.2.2.2	ERP indices of object recognition	194
8.2.2.3	ERP indices of spatial recognition	197
8.2.3	Discussion	197

8.2.3.1	Object recognition based on pictures and words	198
8.2.3.2	Spatial recognition based on pictures and words	198
8.3	Recognition of Unfamiliar Objects and Spatial Locations	199
8.3.1	Methods	200
8.3.1.1	Subjects	200
8.3.1.2	Stimuli	200
8.3.1.3	Procedure	201
8.3.1.4	EEG recording and statistical analyses	202
8.3.2	Results	202
8.3.2.1	Behavioral data	202
8.3.2.2	Object-based versus spatially-based judgments	202
8.3.2.3	Visualizers and verbalizers	204
8.3.3	Discussion	206
8.4	General Discussion	207
8.4.1	Figural and Verbal Representational Codes for Objects	207
8.4.2	Figural and Verbal Representational Codes for Spatial Locations	209
8.5	Conclusions	210
	References	210

9. Memory for Time: Separating Temporal from Spatial Information Processing

Ricarda Schubotz and Angela D. Friederici

9.1	Introduction	215
9.1.1	Sense of Time	215
9.1.2	Working Memory	216
9.1.2.1	Multi-component model of WM	216
9.1.2.2	Dual task paradigms and double dissociation	217
9.1.3	Time and Space	219
9.1.3.1	Dependence	219
9.1.3.2	Autonomy	220
9.2	No, Single, or Double Dissociation of Temporal and Spatial Information Processing? Behavioral Experiments	222
9.2.1	Experimental Realization	222
9.2.1.1	Dual Tasks	222
9.2.1.2	Hypotheses	223
9.2.2	Experiment 1	224
9.2.2.1	Method	224
9.2.2.2	Results	225
9.2.3	Experiment 2	226
9.2.3.1	Method	226
9.2.3.2	Results	226
9.2.4	Discussion of the Behavioral Data: Single Dissociation	227
9.3	Methodological Shift: ERPs	228
9.3.1	Event-Related Potentials (ERP)	229
9.3.2	Neurophysiological Hypotheses	230

9.3.3	Experiment 3: ERP-Study	232
9.3.3.1	Method	232
9.3.3.2	Results	233
9.3.3.3	Discussion: Implications for the neurophysiological hypotheses . .	236
9.4	Conclusions	237
	References	237

10. Spatial Representations in Small-Brain Insect Navigators: Ant Algorithms

Rüdiger Wehner

10.1	Introduction	241
10.2	Analysis: Vectors, Routes, and Maps	242
10.2.1	Skylight Geometry – Compass Mechanisms	242
10.2.2	Trigonometric Algorithms – Path Integrating Schemes	247
10.2.3	Cognitive Maps – Landmark Snapshots and Site-Based Vectors .	247
10.3	Discussion: Navigating Successfully	252
10.4	Conclusions	255
	References	256

11. Elementary and Configural Forms of Memory in an Insect, the Honeybee

Randolf Menzel, Martin Giurfa, Bertram Gerber and Frank Hellstern

11.1	Introduction	259
11.1.1	Behavior and Biology of Honeybee	259
11.2	Elementary and Configural Forms of Learning in Classical Condi- tioning	260
11.2.1	Classical Conditioning of the Proboscis-Extension Reflex (PER) .	260
11.2.2	The Elementary-Configural Distinction	262
11.2.3	Cognitive Aspects of Elementary Forms of Conditioning?	262
11.2.3.1	Backward inhibitory learning	262
11.2.3.2	Blocking	263
11.2.3.3	Second order conditioning	264
11.2.4	Configural Forms of Conditioning	265
11.2.4.1	Biconditional discrimination	265
11.2.4.2	Negative and positive patterning	266
11.3	Learning in the Natural Context	266
11.3.1	Context Dependent Learning and Retrieval	266
11.3.2	Serial Order in a Temporal-Spatial Domain	268
11.3.3	The Representation of Space in Navigation	269
11.3.4	Visual Discrimination Learning in Honeybees: Generalization, Cat- egorization and Concept Formation	271
11.4	Conclusion	276
	References	277
