The Chern - Simons Theory and Quantized Moduli Spaces of Flat Connections

By *A.Yu. Alekseev* and *V. Schomerus*

1. Introduction	1
2. Chern - Simons Theory and the Moduli Space of Flat Connections	2
3. Quantization of the Moduli Space	6
4. Summary of Results	20

Comments about Higgs Fields, Noncommutative Geometry, and the Standard Model

By *G. Cammarata* and *R. Coquereaux*

1. Introduction	27
2. The Meaning of Noncommutative Geometry	27
3. Noncommutative Versus Commutative Differential Calculus	28
4. Commutative Nonlocal Differential Calculus	29
5. What are the Higgses? The Yukawa Interaction Term	31
6. The Bosonic Lagrangian	33
7. Higgs Fields and Superalgebras	38
8. Comments	43

Large New Applications of Bethe Ansatz

By *L.D. Faddeev*

1. Introduction	51
2. Generalization of Bethe Ansatz	51
3. Bethe Ansatz and High-Energy Quantum Chromodynamics	57
4. The Liouville Model	61
5. Azbel - Hofstadter Model	65
6. Conclusion	69

Universality in Turbulence: An Exactly Solvable Model

By *K. Gawedzki and A. Kupiainen*

1. Introduction	71
2. Energy Cascade and Kolmogorov Scaling	72
3. Functional Methods in Turbulence	76
4. Passive Scalar	79
5. Steady State of the Passive Scalar	90
6. Conclusions	103

Introduction to Integrable Models of Statistical Physics

By *H. Grosse*

1. Introduction	107
2. Quantum Spin Models	110
3. Luttinger Liquid	113
4. From Integrable Models to Quantum Spin Models	116
5. Quantum Integrability - Yang - Baxter Relation	118
6. Algebraic Relations	120

Yang - Baxter Equation and Reflection Equations in Integrable Models

By *P.P. Kulish*

1. Introduction	125
2. Yang - Baxter Equation and Zamolodchikov - Faddeev Algebra	126
3. Reflection Equations and their Covariance	132
4. Integrable Models with Anticommuting Variables (Fermions)	136
5. Integrable Models with Finite Degrees of Freedom	140

Scattering Matrices and Affine Hecke Algebras

By *V. Pasquier*

1. Introduction	145
2. The Scattering Matrix	146
3. The Affine Hecke Algebra	153
4. Affine Hecke Algebra, Quadratic Algebras, and Physical Models	158

Some Algebraic and Analytic Structures in Integrable Systems

By *N. Reshetikhin*

1. Introduction	165
2. Algebraic Structures in Classical Integrable Systems	166
3. Algebraic Structures in Quantum Integrable Systems	177
4. The Thermodynamic Limit	188
5. Conclusion	195

Monodromy Representation of the Mapping Class Group $\mathcal{B}_n$ for the su_2 Knizhnik - Zamolodchikov Equation

By *Y.S. Stanev and I.T. Todorov*

1. Introduction	201
2. KZ Equation for n -Point Functions. Regular Basis of Solutions for $n = 4$	205
3. Braid Group Statistics and Quantum Symmetry. Exchange Matrices for 4-Point Blocks	211
4. A Positive-Semidefinite Braid Invariant Hermitean Form	216
5. Concluding Remarks: Open Problems	219

What are the Quantum Mechanical Lyapunov Exponents?

By *W. Thirring*

1. Introduction	223
2. The Anosov Groups	224
3. Examples	225
4. Sensitive Dependence on Initial Conditions	230
5. Exponential Decay of Time Correlations	232

Area-Preserving Structure of Massless Matter-Gravity Fields in 1+1 Dimensions

By *G. Amelino - Camelia, D. Bak, and D. Seminara*

1. Introduction	239
2. Anomalous Ward Identities	241
3. Conclusion	243

Solitons in the Calogero - Sutherland Collective-Field Model

By *I. Andrić, V. Bardek, and L. Jonke*

- | | |
|-----------------------|-----|
| 1. Introduction | 245 |
| 2. Soliton | 246 |

$W_{1+\infty}$ Minimal Models and the Hierarchy of the Quantum Hall Effect

By *A. Cappelli, C.A. Trugenberger, and G.R. Zemba*

- | | |
|--|-----|
| 1. Introduction | 249 |
| 2. The $W_{1+\infty}$ Dynamical Symmetry
of the Laughlin Incompressible Fluid | 250 |
| 3. Classification of QHE Universality Classes | 253 |
| 4. The Standard Theory of Edge Excitations
and the Hierarchy | 253 |
| 5. $W_{1+\infty}$ Minimal Models | 255 |
| 6. Conclusions | 258 |

Creation and Annihilation Operators for $b - c$ Systems on General Algebraic Curves

By *F. Ferrari and J. Sobczyk*

- | | |
|---------------------------------|-----|
| 1. Introduction | 259 |
| 2. The Operator Formalism | 260 |
| 3. Final Remarks | 262 |

Interacting Electrons and Localized Spins: Exact Results from Conformal Field Theory

By *P. Fröjdh and H. Johannesson*

- | | |
|---|-----|
| 1. Introduction | 265 |
| 2. Boundary Conformal Field Theory | 266 |
| 3. Kondo Effect in a Luttinger Liquid | 267 |

On the $U(1)$ Problem of QED_2

By *C. Gattringer*

- | | |
|---|-----|
| 1. Introduction | 273 |
| 2. The Model and Techniques Applied | 273 |
| 3. Lessons on the $U(1)$ Problem | 277 |

The Finite Gauge Model on the Truncated Sphere

By *H. Grosse, C. Klimčík, and P. Prešnajder*

1. Introduction	279
2. The Schwinger Model on the Standard S^2	279
3. The Noncommutative Case	282

Local Operators in Massive Quantum Field Theories

By *A. Koubek*

1. Introduction	285
2. Form Factors and the Space of Local Operators	286

On Anomalies and Noncommutative Geometry

By *E. Langmann*

1. Introduction	291
2. NCG and Schwinger Terms	292
3. Efficient Anomaly Calculations	296
4. Final Remarks	296

Quantum Deformations of Space-Time Symmetries with Fundamental Mass Parameter

By *J. Lukierski*

1. Introduction	299
2. κ -Deformed $D = 4$ Poincaré Algebra	299
3. κ -Deformed Poincaré Group	301
4. κ -Deformed $D = 4$ Supersymmetry	302
5. Final Remarks	302

Magnetic Field-Induced 2D Wigner Solid versus Incompressible Quantum Liquid

By *G. Meissner*

1. Introduction	305
2. Outline of the Many-Body Approach	306
3. Summary of Results	307

Random Walks over Wilson Loop SpaceBy *A. Protogenov*

- | | |
|----------------------------|-----|
| 1. Introduction | 309 |
| 2. q -Random Walks | 310 |
| 3. Discussion | 311 |

Polynomial Identities on Reflection Equation AlgebraBy *P.N. Pyatov* and *P.A. Saponov*

- | | |
|--|-----|
| 1. Introduction | 315 |
| 2. Quantum Newton Relations and Characteristic Polynomial .. | 317 |

Introduction to Poisson σ -Models 321By *P. Schaller* and *T. Strobl***On Solution of Self-Duality Equation****in Quantum-Group Gauge Theory** 335By *B.M. Zupnik*
