Contents

1. Introduction 1

2. Time Reversal and Unitary Symmetries 15
2.1 Autonomous Classical Flows 15
2.2 Spinless Quanta 15
2.3 Spin-1/2 Quanta 17
2.4 Hamiltonians Without T Invariance 19
2.5 T Invariant Hamiltonians, $T^2 = 1$ 20
2.6 Kramers' Degeneracy 20
2.7 Kramers' Degeneracy and Geometric Symmetries 21
2.8 Kramers' Degeneracy Without Geometric Symmetries 23
2.9 Nonconventional Time Reversal 25
2.10 Stroboscopic Maps for Periodically Driven Systems 27
2.11 Time Reversal for Maps 29
2.12 Canonical Transformations for Floquet Operators 31
2.13 Experimental Distinction Between Universality Classes 34
2.14 Beyond Dyson's Threefold Way 35
2.15 Problems 35

3. Level Repulsion 37
3.1 Preliminaries 37
3.2 Symmetric Versus Nonsymmetric H or F 38
3.3 Kramers' Degeneracy 40
3.4 Universality Classes of Level Repulsion 42
3.5 Experimental Observation of Level Repulsion 43
3.6 Problems 45

4. Random-Matrix Theory 47
4.1 Preliminaries 47
4.2 Gaussian Ensembles of Hermitian Matrices 48
4.3 Eigenvalue Distributions for the Gaussian Ensembles 51
4.4 Level Spacing Distributions 54
4.5 Invariance of the Differential Volume Element in Matrix Space 54

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.6 Average Level Density . . . 57
4.7 Unfolding Spectra . . . 58
4.8 Eigenvector Distributions . . . 60
4.8.1 Single-Vector Density . . . 60
4.8.2 Joint Density of Eigenvectors . . . 64
4.9 Ergodicity of the Level Density . . . 64
4.10 Dyson's Circular Ensembles . . . 67
4.11 Asymptotic Level Spacing Distributions . . . 69
4.12 Determinants as Gaussian Integrals over Anticommuting Variables . . . 78
4.13 Two-Point Correlations of the Level Density . . . 83
4.13.1 Two-Point Correlator and Form Factor . . . 83
4.13.2 Form Factor for the Poissonian Ensemble . . . 84
4.13.3 Form Factor for the CUE . . . 85
4.13.4 Form Factor for the COE . . . 87
4.13.5 Form Factor for the CSE . . . 91
4.14 Higher Correlations of the Level Density . . . 93
4.14.1 Correlation and Cumulant Functions . . . 93
4.14.2 Four-Point Correlator and Ergodicity of the Two-Point Correlator . . . 95
4.14.3 Traces and Secular Coefficients . . . 98
4.14.4 Cross-Correlations Between Traces and Ergodicity of the Form Factor . . . 102
4.14.5 Joint Density of Traces of Large CUE Matrices . . . 104
4.15 Correlations of Secular Coefficients . . . 106
4.16 Fidelity of Kicked Tops to Random-Matrix Theory . . . 112
4.17 Problems . . . 117

5. Level Clustering . . . 119
5.1 Preliminaries . . . 119
5.2 Invariant Tori of Classically Integrable Systems . . . 119
5.3 Einstein–Brillouin–Keller Approximation . . . 121
5.4 Level Crossings for Integrable Systems . . . 123
5.5 Poissonian Level Sequences . . . 123
5.6 Superposition of Independent Spectra . . . 124
5.7 Periodic Orbits and the Semiclassical Density of Levels . . . 125
5.8 Level Density Fluctuations for Integrable Systems . . . 131
5.9 Exponential Spacing Distribution for Integrable Systems . . . 136
5.10 Equivalence of Different Unfoldings . . . 137
5.11 Problems . . . 139

6. Level Dynamics . . . 141
6.1 Preliminaries . . . 141
6.2 Fictitious Particles . . . 142
6.3 Conservation Laws . . . 146

6.4 Intermultiplet Crossings . . . 148
6.5 Level Dynamics for Classically Integrable Dynamics . . . 149
6.6 Two-Body Collisions . . . 155
6.7 Ergodicity of Level Dynamics and Universality of Spectral Fluctuations . . . 156
6.7.1 Ergodicity . . . 156
6.7.2 Collision Time . . . 158
6.7.3 Universality . . . 159
6.8 Equilibrium Statistics . . . 160
6.9 Random-Matrix Theory as Equilibrium Statistical Mechanics . . . 163
6.9.1 General Strategy . . . 163
6.9.2 A Typical Coordinate Integral . . . 167
6.9.3 Influence of a Typical Constant of the Motion . . . 172
6.9.4 The General Coordinate Integral . . . 173
6.9.5 Concluding Remarks . . . 175
6.10 Dynamics of Rescaled Energy Levels . . . 176
6.11 Level Curvature Statistics . . . 179
6.12 Level Velocity Statistics . . . 187
6.13 Level Equilibration for Classically Integrable Systems . . . 190
6.14 Level Equilibration for (a Caricature of) Classically Chaotic Systems . . . 195
6.15 Dyson's Brownian-Motion Model . . . 198
6.16 Local and Global Equilibrium in Spectra . . . 207
6.17 Adiabatic Invariance of Quantum Maps . . . 215
6.18 Problems . . . 216

7. Quantum Localization . . . 221
7.1 Preliminaries . . . 221
7.2 Localization in Anderson's Hopping Model . . . 223
7.3 The Kicked Rotator as a Variant of Anderson's Model . . . 225
7.4 Lloyd's Model . . . 231
7.5 The Classical Diffusion Constant as the Quantum Localization Length . . . 236
7.6 Absence of Localization for the Kicked Top . . . 237
7.7 The Rotator as a Limiting Case of the Top . . . 247
7.8 Problems . . . 249

8. Semiclassical Roles for Classical Orbits . . . 251
8.1 Preliminaries . . . 251
8.2 Van Vleck Propagator . . . 252
8.2.1 Maps . . . 253
8.2.2 Flows . . . 258
8.3 Trace Formulae and the Density of Levels à la Gutzwiller . . . 263
8.3.1 Maps . . . 263

8.3.2 Flows . . . 267
8.3.3 Weyl's Law . . . 272
8.3.4 Limits of Validity and Outlook . . . 273
8.4 Lagrangian Manifolds, Maslov Theory, and Maslov Indices . . . 275
8.4.1 Lagrangian Manifolds . . . 275
8.4.2 Elements of Maslov Theory . . . 281
8.4.3 Maslov Indices of Unstable Periodic Orbits as Winding Numbers . . . 284
8.5 Single-Freedom Periodic Driving as Two-Freedom Autonomy . . . 289
8.6 The Sum Rule of Hannay and Ozorio de Almeida . . . 292
8.7 The "Diagonal" Approximation for the Short-Time Form Factor . . . 294
8.7.1 Maps . . . 294
8.7.2 Flows . . . 296
8.7.3 A Classical Zeta Function . . . 299
8.8 The Form Factor at Long Times . . . 303
8.9 Bootstrap of Short and Long Orbits Through Unitarity . . . 304
8.10 Spectral Statistics Beyond the Diagonal Approximation . . . 310
8.11 Singularity Skeleton of Form Factor and Cluster Function . . . 315
8.12 Mixed Phase Space . . . 317
8.13 Problems . . . 320

9. Dissipative Systems . . . 323
9.1 Preliminaries . . . 323
9.2 Hamiltonian Embeddings and Generators of Damped Motion . . . 323
9.3 Time-Scale Separation for Probabilities and Coherences . . . 329
9.4 Dissipative Death of Quantum Recurrences . . . 331
9.5 Complex Energies and Quasi-Energies . . . 339
9.6 Different Degrees of Level Repulsion for Regular and Chaotic Motion . . . 341
9.7 Poissonian Random Process in the Plane . . . 345
9.8 Ginibre's Ensemble of Random Matrices . . . 346
9.8.1 Normalizing the Joint Density . . . 347
9.8.2 The Density of Eigenvalues . . . 349
9.8.3 The Reduced Joint Densities . . . 350
9.8.4 The Spacing Distribution . . . 352
9.9 General Properties of Generators of Dissipative Dynamics . . . 356
9.10 Level Dynamics of Dissipative Systems . . . 360
9.10.1 Hamiltonian Dynamics of Real Symmetric Matrices . . . 361
9.10.2 Hamiltonian Dynamics of General Complex Matrices . . . 364
9.10.3 Ginibre's Ensemble . . . 366
9.11 Resistance of Cubic Repulsion to Antiunitary Symmetries . . . 367

9.12 Irrelevance of Microreversibility to Cubic Repulsion 369
9.13 Dissipation of Quantum Localization 374
9.13.1 Zaslavsky's Map 374
9.13.2 The Quantum Mechanical Damped Rotator 377
9.13.3 Destruction of Localization 380
9.14 Construction of Damping Propagators 383
9.14.1 Damped Spin 383
9.14.2 Damped Rotator 384
9.15 Can the Kicked Top Be Realized? 386
9.16 Problems 387

10. Superanalysis for Random-Matrix Theory 391
10.1 Preliminaries 391
10.2 Semicircle Law for the Gaussian Unitary Ensemble 392
10.2.1 The Green Function and Its Average 392
10.2.2 The GUE Average 394
10.2.3 Doing the Superintegral 394
10.2.4 Two Remaining Saddle-Point Integrals 396
10.3 Superalgebra 400
10.3.1 Motivation and Generators of Grassmann Algebras 400
10.3.2 Supervectors, Supermatrices 400
10.3.3 Superdeterminants 402
10.3.4 Complex Scalar Product, Hermitian and Unitary Supermatrices 404
10.3.5 Diagonalizing Supermatrices 405
10.4 Superintegrals 406
10.4.1 Some Bookkeeping for Ordinary Gaussian Integrals 406
10.4.2 Recalling Grassmann Integrals 408
10.4.3 Gaussian Superintegrals 409
10.4.4 Some Properties of General Superintegrals 410
10.4.5 Integrals over Supermatrices, Parisi–Sourlas–Efetov–Wegner Theorem 412
10.5 The Semicircle Law Revisited 413
10.6 The Two-Point Function of the Gaussian Unitary Ensemble 417
10.6.1 The Generating Function 417
10.6.2 Unitary Versus Hyperbolic Symmetry 419
10.6.3 Efetov's Nonlinear Sigma Model 422
10.6.4 Implementing the Zero-Dimensional Sigma Model 429
10.6.5 Integration Measure of the Nonlinear Sigma Model 431
10.6.6 Back to the Generating Function 436
10.7 Universality of Spectral Fluctuations: Non-Gaussian Ensembles 437
10.7.1 Delta Functions of Grassmann Variables 438
10.7.2 Generating Function 439
10.8 Universal Spectral Fluctuations of Sparse Matrices 441

10.9 Thick Wires, Banded Random Matrices, One-Dimensional Sigma Model 442
10.9.1 Banded Matrices Modelling Thick Wires 442
10.9.2 Inverse Participation Ratio and Localization Length 444
10.9.3 One-Dimensional Nonlinear Sigma Model 445
10.9.4 Implementing the One-Dimensional Sigma Model 450
10.10 Problems 458
