1 Path Integrals and Their Application to Dissipative Quantum Systems

<i>Gert-Ludwig Ingold</i>	1
1.1 Introduction	1
1.2 Path Integrals	2
1.2.1 Introduction	2
1.2.2 Propagator	2
1.2.3 Free Particle	5
1.2.4 Path Integral Representation of Quantum Mechanics	6
1.2.5 Particle on a Ring	8
1.2.6 Particle in a Box	10
1.2.7 Driven Harmonic Oscillator	13
1.2.8 Semiclassical Approximation	18
1.2.9 Imaginary Time Path Integral	23
1.3 Dissipative Systems	26
1.3.1 Introduction	26
1.3.2 Environment as a Collection of Harmonic Oscillators	27
1.3.3 Effective Action	33
1.4 Damped Harmonic Oscillator	39
1.4.1 Partition Function	39
1.4.2 Ground State Energy and Density of States	40
1.4.3 Position Autocorrelation Function	45
References	51

2 Five Lectures on Dissipative Master Equations

<i>Berthold-Georg Englert, Giovanna Morigi</i>	55
Introductory Remarks	55
2.1 First Lecture: Basics	55
2.1.1 Physical Derivation of the Master Equation	56
2.1.2 Some Simple Implications	61
2.1.3 Steady State	61
2.1.4 Action to the Left	62
Homework Assignments	63
2.2 Second Lecture: Eigenvalues and Eigenvectors of $\mathcal{L}$	64
2.2.1 A Simple Case First	64
2.2.2 The General Case	67

	Homework Assignments	69
2.3	Third Lecture: Completeness of the Damping Bases	70
2.3.1	Phase Space Functions	70
2.3.2	Completeness of the Eigenvectors of $\mathcal{L}$	74
2.3.3	Positivity Conservation	76
2.3.4	Lindblad Form of Liouville Operators	77
	Homework Assignments	78
2.4	Fourth Lecture: Quantum-Optical Applications	78
2.4.1	Periodically Driven Damped Oscillator	78
2.4.2	Conditional and Unconditional Evolution	83
2.4.3	Physical Significance of Statistical Operators	86
	Homework Assignments	91
2.5	Fifth Lecture: Statistics of Detected Atoms	92
2.5.1	Correlation Functions	93
2.5.2	Waiting Time Statistics	95
2.5.3	Counting Statistics	97
	Homework Assignments	102
	Appendix	104
	References	105

3 Stochastic Resonance

	<i>Kurt Wiesenfeld, Thomas Wellens, Andreas Buchleitner</i>	107
3.1	Introduction	107
3.2	Some Mathematical Tools	107
3.3	Example: Driven Linear System	109
3.4	Mean First Passage Time and Kramers Escape Formula	112
3.5	Rate Equation Description	114
3.6	Two State Theory of Stochastic Resonance	114
3.7	The Unmodulated Case	115
3.8	Time Dependent Rates	117
3.9	Two-State Examples: Classical and Quantum Stochastic Resonance	122
3.10	Quantum Stochastic Resonance in the Micromaser	125
3.11	Stochastic Resonance in Excitable Systems	131
3.12	The Frontier of Stochastic Resonance	136
	References	138

4 Quantum Markov Processes

	<i>Burkhard Kümmerner</i>	139
	Introduction	139
4.1	An Example	140
4.1.1	The System	140
4.1.2	One Time Step	141
4.1.3	Many Time Steps	141
4.1.4	Outlook	142

4.2	Markovian Behaviour on General State Spaces	143
4.2.1	Transition Probabilities with Densities	143
4.2.2	Transition Kernels	144
4.2.3	Transition Operators	146
4.2.4	Continuous Time	147
4.3	Random Variables and Markov Processes	150
4.3.1	Example and Motivation	150
4.3.2	One Random Variable	152
4.3.3	Two Random Variables	153
4.3.4	Many Random Variables	154
4.3.5	Conditional Expectations	155
4.3.6	Markov Processes	156
4.4	Quantum Mechanics	157
4.4.1	The Axioms of Quantum Mechanics	157
4.4.2	An Example: Two-Level Systems	158
4.4.3	How Quantum Mechanics is Related to Classical Probability ...	158
4.5	Unified Description of Classical and Quantum Systems	160
4.5.1	Probability Spaces	160
4.5.2	Random Variables and Stochastic Processes	163
4.5.3	Conditional Expectations	165
4.5.4	Markov Processes	166
4.5.5	Relation to Open Systems	168
4.6	Constructing Markov Processes	170
4.6.1	A Construction Scheme for Markov Processes	170
4.6.2	Other Types of Markov Processes in the Literature	172
4.6.3	Dilations	173
4.7	An Example on M_2	173
4.7.1	The Example	173
4.7.2	A Physical Interpretation: Spins in a Stochastic Magnetic Field	175
4.7.3	Further Discussion of the Example	177
4.8	Completely Positive Operators	178
4.8.1	Complete Positivity	178
4.8.2	Interpretation of Complete Positivity	179
4.8.3	Representations of Completely Positive Operators	180
4.9	Semigroups of Completely Positive Operators and Lindblad Generators	181
4.9.1	Generators of Lindblad Form	181
4.9.2	Interpretation of Generators of Lindblad Form	182
4.9.3	Quantum Stochastic Differential Equations	183
4.10	Repeated Measurement and Its Ergodic Theory	184
4.10.1	Measurement According to von Neumann	184
4.10.2	Indirect Measurement According to K. Kraus	185

4.10.3 Measurement of a Quantum System and Concrete Representations of Completely Positive Operators	187
4.10.4 Repeated Measurement	189
4.11 The Micromaser as a Quantum Markov Process	192
4.11.1 The Experiment	192
4.11.2 The Micromaser Realizes a Quantum Markov Process	193
4.11.3 The Jaynes–Cummings Interaction	194
4.11.4 Asymptotic Completeness and Preparation of Quantum States	195
References	197

5 Decoherence in Quantum Physics

<i>Walter T. Strunz</i>	199
5.1 Introduction	199
5.1.1 Open Quantum Systems	199
5.1.2 Decoherence: Two Simple Examples	201
5.1.3 First Conclusions	206
5.1.4 Decoherence and the “Measurement Problem”	207
5.1.5 The Paris and Boulder Experiments	208
5.2 Decoherence in Quantum Brownian Motion	210
5.2.1 Classical Brownian Motion	210
5.2.2 High Temperature Limit	212
5.2.3 Decoherence	214
5.3 Robust States	216
5.3.1 Robustness in Terms of Hilbert–Schmidt Norm	216
5.3.2 Example: Lindblad Master Equation	218
5.3.3 Quantum Brownian Motion (Simplified)	219
5.3.4 Robustness Based on Entropy	220
5.3.5 Stochastic Schrödinger Equations and Robust States	223
5.3.6 Some Remarks about Stochastic Schrödinger Equations	224
5.4 Decoherence of Macroscopic Superpositions	227
5.4.1 Soluble Model	228
5.4.2 Universality of Decoherence	230
5.5 Conclusions	232
References	233

6 Quantum Communication and Decoherence

<i>Hans Aschauer, Hans J. Briegel</i>	235
6.1 Introduction	235
6.2 Quantum Error Correction	237
6.3 Entanglement Purification	241
6.3.1 2-Way Entanglement Purification Protocols	242
6.3.2 Purification with Imperfect Apparatus	244
6.4 Quantum Cryptography	246
6.4.1 The BB84 Protocol	247
6.4.2 The Ekert Protocol	248

6.4.3	Security Proofs	250
6.5	Private Entanglement	250
6.5.1	The Lab Demon	251
6.5.2	The State of the Qubits Distributed Through the Channel	252
6.5.3	Binary Pairs	254
6.5.4	Bell-Diagonal Initial States	257
	References	260
7	How to Correct Small Quantum Errors	
	<i>Michael Keyl, Reinhard F. Werner</i>	263
7.1	Introduction	263
7.2	Quantum Channels	264
7.3	Channel Capacities	265
7.3.1	The cb-Norm	266
7.3.2	Achievable Rates and Capacity	266
7.3.3	Elementary Properties	268
7.4	Quantum Error Correction	269
7.4.1	An Error Corrector's Dream	270
7.4.2	Realizing the Dream by Unitary Transformation	271
7.4.3	The Knill–Laflamme Condition	272
7.4.4	Example: Localized Errors	272
7.5	Graph Codes	273
7.6	Discrete to Continuous Error Model	276
7.7	Coding by Random Graphs	277
7.8	Conclusions	280
7.8.1	Correcting Small Errors	280
7.8.2	Estimating Capacity from Finite Coding Solutions	281
7.8.3	Error Exponents	283
7.8.4	Capacity with Finite Error Allowed	284
	References	285
	Index	287
