Preface	v
1 Introduction	1
1.1 Conceptual framework of multilevel modeling	1
1.2 Hierarchically structured data.....	3
1.3 Variables in multilevel data	4
1.4 Analytical problems with multilevel data	6
1.5 Advantages and limitations of multilevel modeling	8
1.6 Computer software for multilevel modeling	10
2 Basics of linear multilevel models	13
2.1 Intraclass correlation coefficient (ICC).....	13
2.2 Formulation of two-level multilevel models.....	15
2.3 Model assumptions	17
2.4 Fixed and random regression coefficients.....	18
2.5 Cross-level interactions.....	20
2.6 Measurement centering.....	21
2.7 Model estimation.....	23
2.8 Model fit, hypothesis testing, and model comparisons.....	27
2.8.1 Model fit	27
2.8.2 Hypothesis testing	28
2.8.3 Model comparisons	30
2.9 Explained level-1 and level-2 variances.....	30
2.10 Steps for building multilevel models.....	33
2.11 Higher-level multilevel models	37
3 Application of two-level linear multilevel models.....	39
3.1 Data	39
3.2 Empty model	42
3.3 Predicting between-group variation	48
3.4 Predicting within-group variation.....	53
3.5 Testing level-1 random	57

3.6	Across-level interactions	62
3.7	Other issues in model development.....	66
4	Application of multilevel modeling to longitudinal data.....	73
4.1	Features of longitudinal data.....	73
4.2	Limitations of traditional approaches for modeling longitudinal data	74
4.3	Advantages of multilevel modeling for longitudinal data.....	75
4.4	Formulation of growth models.....	75
4.5	Data and variable description.....	77
4.6	Linear growth models	79
4.6.1	The shape of average outcome change over time.....	80
4.6.2	Random intercept growth models.....	80
4.6.3	Random intercept-slope growth models	84
4.6.4	Intercept and slope as outcomes	86
4.6.5	Controlling for individual background variables in models	88
4.6.6	Coding time score.....	89
4.6.7	Residual variance/covariance structures.....	91
4.6.8	Time-varying covariates	95
4.7	Curvilinear growth models	98
4.7.1	Polynomial growth model	98
4.7.2	Dealing with collinearity in higher order polynomial growth model	100
4.7.3	Piecewise (linear spline) growth model.....	106
5	Multilevel models for discrete outcome measures	113
5.1	Introduction to generalized linear mixed models.....	113
5.1.1	Generalized linear models.....	113
5.1.2	Generalized linear mixed models.....	115
5.2	SAS Procedures for multilevel modeling with discrete outcomes	116
5.3	Multilevel models for binary outcomes.....	117
5.3.1	Logistic regression models.....	117
5.3.2	Probit models.....	118
5.3.3	Unobserved latent variables and observed binary outcome measures	119
5.3.4	Multilevel logistic regression models	119
5.3.5	Application of multilevel logistic regression models.....	120
5.3.6	Application of multilevel logit models to longitudinal data	136
5.4	Multilevel models for ordinal outcomes.....	139
5.4.1	Cumulative logit models	139
5.4.2	Multilevel cumulative logit models	141
5.5	Multilevel models for nominal outcomes.....	146

5.5.1	Multinomial logit models	146
5.5.2	Multilevel multinomial logit models	147
5.5.3	Application of multilevel multinomial logit models	148
5.6	Multilevel models for count outcomes	154
5.6.1	Poisson regression models	155
5.6.2	Poisson regression with over-dispersion and a negative binomial model	157
5.6.3	Multilevel Poisson and negative binomial models	158
5.6.4	Application of multilevel Poisson and negative binomial models	158
6	Other applications of multilevel modeling and related issues	175
6.1	Multilevel zero-inflated models for count data with extra zeros	175
6.1.1	Fixed-effect zero-inflated Poisson (ZIP) model	176
6.1.2	Random effect zero-inflated Poisson (RE-ZIP) models	177
6.1.3	Random effect zero-inflated negative binomial (RE-ZINB) models	178
6.1.4	Application of RE-ZIP and RE-ZINB models	178
6.2	Mixed-effect mixed-distribution models for semi-continuous outcomes	188
6.2.1	Mixed-effect mixed distribution model	189
6.2.2	Application of the mixed-effect mixed distribution model	190
6.3	Bootstrap multilevel modeling	195
6.3.1	Nonparametric residual bootstrap multilevel modeling	196
6.3.2	Parametric residual bootstrap multilevel modeling	197
6.3.3	Application of nonparametric residual bootstrap multilevel modeling	198
6.4	Group-based models for longitudinal data analysis	210
6.4.1	Introduction to group-based trajectory model	212
6.4.2	Group-based logit trajectory model	214
6.4.3	Group-based zero-inflated Poisson (ZIP) trajectory model	222
6.4.4	Group-based censored normal trajectory models	230
6.5	Missing values issue	237
6.5.1	Missing data mechanisms and their implications	238
6.5.2	Handling missing data in longitudinal data analyses	239
6.6	Statistical power and sample size for multilevel modeling	241
6.6.1	Sample size estimation for two-level designs	241
6.6.2	Sample size estimation for longitudinal data analysis	242
