

Introduction	1
1 Anatomical Location of AVMs from the Surgical Viewpoint	3
Localization in Planning Operative Approach	3
Subgroups of Convexity AVMs	8
Subgroups of Central AVMs	8
2 Clinical Considerations	13
Incidence/Prevalence	13
The Frequency of AVM in Various Neurosurgical Series	13
Family History	14
Age – Sex – Location	14
AVM and Aneurysm in Relation to Sex and Age	16
Symptoms	16
Hemorrhage	16
Seizures	19
Headache	20
Neurological Status	21
Electroencephalography (EEG)	23
AVM and Pregnancy	23
3 Surgical Concerns	25
Operative Management	25
Neuroradiological Investigation	25
Staging of Operations and the Use of Hypotension	27
Timing of Operation	28
Intracerebral Hematoma	28
Auxiliary Investigations and Methods	34
Management of AVMs with Coincidental Arterial Aneurysms	34
General Preoperative Methods	34
Advantages of the Operating Microscope	35
General Operative Concepts and Techniques	36
Operative Approaches	36
General Surgical Techniques	40
Dissection	40
Opening of Fissures and Sulci	42
Excision of the AVM	51
Intraoperative Complications	52
Completing the Operation	53
Laser Surgery	53

4 Special Surgical Considerations	55
Convexity (Pallial) AVMs	55
Supratentorial	55
Frontal AVMs	55
Statistical Analysis	83
Parietal AVMs	87
Statistical Analysis	109
Temporal AVMs	112
Statistical Analysis	134
Insular AVMs	137
Statistical Analysis	148
Occipital AVMs	152
Statistical Analysis	164
Infratentorial AVMs	168
Infratentorial Cerebellar Convexity AVMs	169
Statistical Analysis	201
Deep Central AVMs	204
Supratentorial (Central) AVMs	211
Limbic System	211
Statistical Analysis	224
Callosal AVMs	225
Statistical Analysis	259
Statistical Analysis	267
Statistical Analysis	291
Strio-Capsulo-Thalamic AVMs	293
Statistical Analysis	314
AVMs of the Choroid Plexus (Trigone)	317
AVM of Vein of Galen Region	323
Statistical Analysis	353
Infratentorial (Central) AVMs	358
Mesencephalic AVMs	358
Pontine AVMs	361
Statistical Analysis	366
Conclusions Concerning Central AVMs	367

5 Summary of Operative Results	369
Statistical Analysis	370
Residual AVM and Postoperative Course	376
Postoperative Angiography and CT Scan	379
Morbidity	379
Mortality	381

6 Children with AVM	393
Statistical Analysis	394

7 Nonoperated Patients with AVM	397
Mortality in Relation to Sex, Age of Patient and Site of AVM	397
Follow-up in Nonoperated Cases	399
Summary of Operated versus Nonoperated Cases	404

8 Venous, Cavernous and Occult Angiomas	405
Neuroradiological Considerations	406
Venous Angiomas	406
Cavernous and Occult Angiomas	415
Occult Malformations	418
Clinical Features and Surgical Results	419
Cavernous Angiomas	419
Clinical Features	419
Indications for Surgical Treatment	420
Cavernous Malformations in the Zurich Series	420
Operative Technique	421
Operative Results	434
Venous and Occult Angiomas	435
Clinical Features	435
Indications for Operation	435
Operative Techniques	435
Results	435

9 Final Comments AVMs	439
Cavernous and Venous Angiomas	444
 10 Anesthesia in the Surgery of Cerebrovascular Malformations	447
Anesthetic Practice	447
Anesthetic Routine	447
Premedication	447
Induction and Maintenance of Anesthesia ..	447
Antibiotics and Anticonvulsants	448
Infusion Requirements	448
Transfusion	448
Controlled Hypotension	449
Deep Hypotension	449
Controlled Hypotension in the Sitting Position	449
The Administration of Morphine	
Antagonists	453
Postoperative Routine	453
 References	455
 Index	475
