Introduction	1
 I. Adiabatic Invariants and Magnetospheric Models	 10
I.1 Preliminary Considerations	10
I.2 Action-Angle Variables	11
I.3 Liouville's Theorem	14
I.4 The Dipole Field	16
I.5 The Distorted Field	22
I.6 Magnetospheric Electric Fields	35
I.7 Flux Mapping and Shell Tracing	39
 II. Pitch-Angle Diffusion	 46
II.1 Violation of an Adiabatic Invariant	46
II.2 Collisions	48
II.3 Wave-Particle Interactions	60
II.4 Bounce Resonance	62
II.5 Cyclotron Resonance	65
II.6 Limit on Trapped Flux	72
II.7 Weak Diffusion and Strong Diffusion	77
 III. Radial Diffusion	 81
III.1 Violation of the Third Invariant	81
III.2 Magnetic Impulses	85
III.3 Electrostatic Impulses	92
III.4 Bounce Resonance	95
III.5 Cyclotron Resonance	96
III.6 Bohm Diffusion	98
III.7 Shell Splitting	100
III.8 Diffusion in More Than One Mode	105

IV. Prototype Observations	114
IV.1 Preliminary Considerations	114
IV.2 Decay of Particle Flux (Inner Zone)	116
IV.3 Decay of Particle Flux (Outer Zone)	122
IV.4 Statistical Observations	128
IV.5 Static Flux Profiles	130
IV.6 Time-Varying Flux Profiles	136
IV.7 Fluctuating Magnetospheric Fields	144
IV.8 Drift Echoes	152
V. Methods of Empirical Analysis	160
V.1 Basic Objectives	160
V.2 Pitch-Angle Eigenmodes	162
V.3 Quadrature (Spatial)	168
V.4 Quadrature (Temporal)	175
V.5 Variational Method	178
V.6 Temporal Integration	183
V.7 Spatial Integration	189
VI. Summary	192
References	197
Frequently used Symbols	205
Subject Index	209
