

Contents

1	Nanomedicine: The Medicine of Tomorrow	1
	S. Logothetidis	
1.1	Introduction	2
1.2	Nanomaterials and Nanoparticles in Biomedical Applications.....	4
1.3	Nanotechnology Principles and Tools in Medicine	8
1.4	Nanotechnology and Nanomedicine: New Medical Approaches....	11
1.4.1	“Nanomedicine”	11
1.4.2	“Regenerative Medicine”	13
1.4.3	“Nanorobots” and Nanodevices	13
1.4.4	Biocompatibility and Orthopaedic Implants	14
1.4.5	Nanotechnology in Cardiology	15
1.4.6	Nanotechnology Against Cancer	18
1.4.7	“Theranostics”	21
1.4.8	Prospects of Nanotechnology in Medicine and virtual Environments	22
1.5	Nanotoxicity: Possible Impact on Human Health.....	22
1.6	Conclusions	23
	References	24
2	Nanomedicine Pillars and Monitoring	
	Nano-biointeractions	27
	V. Karagkiozaki, S. Logothetidis, and E. Vavoulidis	
2.1	Introduction	27
2.2	Nanomedicine Main Pillars	28
2.2.1	Targeted Drug Delivery	28
2.2.2	Regenerative Medicine	32
2.3	Nanomedicine for Monitoring Bio/Non-Biointeractions	35
2.3.1	Atomic Force Microscopy for Imaging of Proteins and Cells	36
2.3.2	Implementation of AFM for Protein Adsorption Studies....	37

2.3.3	AFM Implementation for Imaging Platelets and Erythrocytes.....	40
2.4	Nanotoxicity	46
2.5	Future Challenges and Perspectives	51
2.6	Summary	51
	References	52
3	Biofunctionalization of Surfaces with Peptides, Proteins, or Subcellular Organelles: Single-Molecule Studies and Nanomedical Approach	57
	A. Katranidis and T. Choli-Papadopoulou	
3.1	Introduction	57
3.2	Surface Treatment for Specific Immobilization of Proteins	58
3.3	In Vivo Protein Biotinylation.....	59
3.4	Single-Molecule Studies of Protein Folding	60
3.5	Cotranslational Protein Folding Vs. Refolding.....	61
3.6	Biofunctionalization for Nanomedical Applications.....	64
3.7	The Biology of Cell–Cell or Cell–ECM Interactions	64
3.8	Protein/Peptide Surface Immobilization	66
3.9	Conclusion	66
	References	67
4	Imaging the Human Body: Micro- and Nanostructure of Human Tissues	69
	Georg Schulz, Hans Deyhle, and Bert Müller	
4.1	Introduction	69
4.2	Results and Discussion	71
4.2.1	X-Rays from Synchrotron Facilities.....	71
4.2.2	Principles of Computed Tomography	73
4.2.3	Absorption Contrast CT	73
4.2.4	Grating-Based X-Ray Phase Contrast CT	80
4.2.5	Small-Angle X-Ray Scattering	84
4.3	Conclusion	91
	References	93
5	Nanodentistry	95
	Simone E. Hieber and Bert Müller	
5.1	Introduction	95
5.2	Nanodentistry	96
5.3	Imaging.....	96
5.4	Roadmap	98
5.5	Biomaterials Science	99
5.6	Major Research Topics	100
5.7	Applications of Nanotechnology in Dentistry	101
5.8	Challenges	103
5.9	Future Risks.....	104

5.10	Tailoring Biocompatibility of Implants by Nanostructures: Benefitting Patients	104
5.11	Conclusions	106
	References	106
6	Complement Activation-Related Pseudoallergy Caused by Nanomedicines and its Testing In Vitro and In Vivo	109
	Janos Szebeni and Rudolf Urbanics	
6.1	Introduction	109
6.2	Pseudoallergy as Adverse Effects of Drugs	110
6.3	Mechanism of CARPA	110
6.4	In Vitro and in Vivo Assays of CARPA	112
6.5	Summary	114
	References	114
7	Pharmacogenomics and Nanotechnology Toward Advancing Personalized Medicine	115
	Ioannis S. Vizirianakis and Elsa P. Amanatiadou	
7.1	Introduction	115
7.2	From Genetics and Genomics to the Advent of Pharmacogenomics and Nanomedicine.....	116
7.3	Pharmacological Response Heterogeneity, Drug Interactions, Metabolizing Enzymes, and Therapy Outcomes	119
7.4	Nanotechnology Toward Enabling Personalized Medicine	121
7.5	Information-Based Infrastructure to Facilitate the Practical Utility of Personalized Medicine	122
7.6	Toward Advancing Clinical Translation of Genomic Knowledge for Personalized Medicine	125
7.7	Toward the Wide-Spread Application of Pharmacogenomics to Enhance the Utility of Personalized Medicine	126
7.8	Cost Effectiveness of Pharmacogenomics	127
7.9	Pharmacotyping Concepts for Individualizing Drug Selection and Dosage Schemes	128
7.10	Future Challenges and Perspectives	130
	References	130
