

Table of contents

1	Introduction	1
1.1	Background.....	1
1.1.1	History of Liebherr-Werk Nenzing GmbH	1
1.1.2	Origin of the Compendium	2
1.2	Structure and use of the Compendium	2
1.2.1	General	2
1.2.2	Structure of the main chapters	3
1.2.2.1	Process principle.....	3
1.2.2.2	Characteristics and application limits.....	3
1.2.2.3	Machinery with equipment.....	3
1.2.3	Applications of the ground improvement processes.....	3
1.2.4	IT solutions.....	4
1.2.5	Technical explanations to the Compendium.....	4
2	General	7
3	Wet soil mixing	15
3.1	Process principle	16
3.1.1	Uncased mixing.....	16
3.1.1.1	1-fold rods	16
3.1.1.2	Multiple rods.....	17
3.1.1.3	Continuous flight augers.....	19
3.1.1.4	Counterrotating mixing head	21
3.1.2	Cased mixing	22
3.1.2.1	Low-pressure jetting.....	22
3.1.2.2	High-pressure jetting	24
3.2	Characteristics and application limits	26
3.2.1	Characteristics	26
3.2.2	Application limits	27
3.3	Machinery with equipment.....	28
3.3.1	Carrier machines	28
3.3.1.1	Uncased mixing.....	28
3.3.1.1.1	1-fold rods	28
3.3.1.1.2	Multiple rods.....	32
3.3.1.1.3	Counterrotating mixing head	34

3.3.1.2	Cased mixing	35
3.3.2	Mixing and rotary drives.....	36
3.3.2.1	Mixing drives	36
3.3.2.2	Rotary drives	39
3.3.3	Mixing plants	43
3.3.3.1	General	43
3.3.3.2	Plant units	44
3.3.3.2.1	Silos and screw conveyors	44
3.3.3.2.2	Water tanks.....	44
3.3.3.2.3	Suspension mixers	45
3.3.3.2.4	Storage tanks.....	46
3.3.3.2.5	Feed pumps.....	47
3.3.3.2.5.1	Plunger pumps.....	47
3.3.3.2.5.2	Eccentric screw pumps.....	48
3.3.3.3	Control system.....	48
3.3.3.4	Compact mixing plants.....	50
3.3.4	Machine limits	52
3.3.4.1	Uncased mixing.....	52
3.3.4.1.1	1-fold rods	52
3.3.4.1.2	Multiple rods.....	54
3.3.4.1.3	Counterrotating mixing head	57
3.3.4.2	Cased mixing	58
3.3.5	Tool system.....	59
3.3.5.1	Uncased mixing.....	59
3.3.5.1.1	1-fold rods	59
3.3.5.1.2	Multiple rods.....	61
3.3.5.1.3	Counterrotating mixing head	63
3.3.5.2	Cased mixing	64
3.3.5.2.1	Casing drivers	64
3.3.5.2.2	Casings.....	65
3.3.5.2.3	Cutting shoes.....	66
3.3.5.2.4	Head pieces	66
3.3.5.2.5	Mixing augers.....	67
3.3.5.2.6	Auger starters	68
3.3.5.3	Wear parts	69

4	Dry soil mixing	71
4.1	Process principle	71
4.2	Characteristics and application limits	72
4.2.1	Characteristics	72
4.2.2	Application limits	73
4.3	Machinery with equipment	73
4.3.1	Carrier machines	73
4.3.2	Lime-cement unit	74
4.3.3	Mixing drives	76
4.3.4	Machine limits	76
4.3.5	Tool system	77
5	Cutter soil mixing	79
5.1	Process principle	79
5.2	Characteristics and application limits	81
5.2.1	Characteristics	81
5.2.2	Application limits	82
5.3	Machinery with equipment	82
5.3.1	Carrier machines	82
5.3.1.1	With top drive (TD)	83
5.3.1.2	With hollowed top guide drive (HTGD)	85
5.3.2	Kelly bars and Kelly guides	86
5.3.2.1	Kelly bars	86
5.3.2.2	Kelly guides	87
5.3.2.3	Configurations	88
5.3.3	Cutter mixing heads	89
5.3.4	Machine limits	90
5.3.4.1	With top drive (TD)	90
5.3.4.2	With hollowed top guide drive (HTGD)	90
5.3.5	Tool system	91
6	Applications of soil mixing processes	93
6.1	General	93
6.2	Uncased mixing	93
6.2.1	Single columns for soil stabilisation	93
6.2.1.1	Arrangement for 1-fold mixing	94
6.2.2	Soil mixing panels for soil stabilisation	94

6.2.2.1	Arrangement for 2-fold mixing	95
6.2.2.2	Arrangement for 3-fold mixing	96
6.2.3	Cut-off walls and retaining walls.....	97
6.2.3.1	Soil mixing panels “wet in wet”	97
6.2.3.2	Soil mixing panels using the back-step method.....	97
6.2.3.3	Soil mixing panels with continuous flight augers using the double back-step method	98
6.3	Cased mixing	99
6.3.1	Mixing with low-pressure jetting using a modified back-step method.....	99
6.4	Cutter soil mixing	101
6.5	Structurally load-bearing soil mixing elements.....	102
6.6	Examples for the arrangement of soil mixing elements.....	103
6.7	Dimensioning of mixing plants	104
7	Deep compaction with vibroflot.....	107
7.1	Process principle	109
7.1.1	Vibro-compaction.....	109
7.1.2	Vibro-replacement.....	111
7.1.2.1	Dry top feed process.....	112
7.1.2.2	Wet process.....	113
7.1.2.3	Dry bottom feed process.....	115
7.1.3	Vibro-replacement with hydraulic binders	118
7.1.3.1	Mortared process	118
7.1.3.2	Ready-mixed mortar process	119
7.1.3.3	Partially mortared process	120
7.1.3.4	Vibro concrete process	121
7.1.4	Reinforced vibro-replacement.....	122
7.1.4.1	Geosynthetic-encased sand and crushed stone columns.....	122
7.2	Characteristics and application limits	123
7.2.1	Characteristics	123
7.2.1.1	Vibro-compaction.....	123
7.2.1.2	Vibro-replacement.....	125
7.2.2	Application limits	126
7.2.2.1	General	126
7.2.2.2	Vibro-compaction.....	126
7.2.2.3	Vibro-replacement.....	128
7.3	Machinery with equipment.....	129

7.3.1	Carrier machines	129
7.3.1.1	Crawler excavator with vibroflot	129
7.3.1.2	Leader-guided deep compaction.....	130
7.3.1.3	Free-hanging deep compaction.....	133
7.3.2	Vibroflots	135
7.3.2.1	Functional principle.....	135
7.3.2.2	Electric vibroflots	136
7.3.2.3	Hydraulic vibroflots	137
7.3.3	Air compressors	138
7.3.4	Machine limits	139
7.3.4.1	Crawler excavators	139
7.3.4.2	Leader-guided with dry bottom feed vibroflot.....	139
7.3.4.3	Free-hanging	140
7.3.5	Tool system	142
7.3.5.1	Penetration unit for vibro-compaction with vibroflot	142
7.3.5.1.1	Extension tubes and lifting head	142
7.3.5.1.2	Wear and external parts of the vibroflot	144
7.3.5.1.3	Vibroflot noses for vibro-compaction	145
7.3.5.2	Penetration unit for vibro-replacement with dry bottom feed vibroflot.....	146
7.3.5.2.1	Receiver assembly	146
7.3.5.2.2	Silo tubes	148
7.3.5.2.3	Wear and external parts of the vibroflot	149
7.3.5.2.4	Vibroflot noses for vibro-replacement	150

8 Deep compaction with top vibrator..... 153

8.1	Process principle	153
8.1.1	Mechanical principles of vibration	153
8.1.1.1	Basic principle.....	153
8.1.1.2	Generation of oscillation	154
8.1.1.3	Motion of the piling element.....	155
8.1.1.4	Parameters	156
8.1.1.4.1	Static moment.....	156
8.1.1.4.2	Exciter force	157
8.1.1.4.3	Frequency	157
8.1.1.4.4	Peak-to-peak amplitude.....	157
8.1.1.4.5	Acceleration	158

8.1.1.4.6	Surcharge	158
8.1.2	Deep compaction with compaction probe	159
8.1.3	Deep compaction with casing	160
8.1.3.1	Vibro columns	160
8.1.3.2	Vibro-replacement columns.....	162
8.1.3.3	Vibro concrete columns.....	164
8.1.3.3.1	Closed system	164
8.1.3.3.1.1	Vibrating.....	165
8.1.3.3.1.2	Concreting and extraction	166
8.1.3.3.1.3	Reinforcement.....	167
8.1.3.3.2	Open system.....	167
8.1.3.3.2.1	Vibrating.....	168
8.1.3.3.2.2	Reinforcement.....	168
8.1.3.3.2.3	Concreting and extraction	169
8.1.3.4	Geosynthetic-encased vibro columns.....	169
8.1.3.4.1	Displacement method	170
8.1.3.4.1.1	Vibrating.....	170
8.1.3.4.1.2	Installation of the geosynthetic and insertion of fill material.....	171
8.1.3.4.1.3	Extraction.....	172
8.1.3.4.2	Excavation method.....	174
8.2	Characteristics and application limits	175
8.2.1	Characteristics	175
8.2.1.1	Deep compaction with compaction probe	175
8.2.1.2	Deep compaction with casing	176
8.2.1.2.1	Vibro columns and vibro-replacement columns	176
8.2.1.2.2	Vibro concrete columns.....	177
8.2.1.2.3	Geosynthetic-encased vibro columns.....	178
8.2.2	Application limits	179
8.2.2.1	Deep compaction with compaction probe	180
8.2.2.2	Deep compaction with casing	181
8.2.2.2.1	Vibro columns, vibro-replacement columns and vibro concrete columns	181
8.2.2.2.2	Geosynthetic-encased vibro columns.....	181
8.3	Machinery with equipment.....	182
8.3.1	Carrier machines	182
8.3.1.1	Leader-guided.....	182
8.3.1.2	Free-hanging.....	185

8.3.2	Vibrators	186
8.3.2.1	Construction types	186
8.3.2.1.1	Top vibrators	187
8.3.2.1.2	Ring vibrators	188
8.3.2.1.3	Excavator-mounted vibrators.....	188
8.3.2.2	Constant static moment	189
8.3.2.3	Variable static moment	190
8.3.2.3.1	Adjustment with separate shafts.....	192
8.3.2.3.2	Adjustment with concentric shafts	193
8.3.2.4	Resonators.....	194
8.3.2.5	Clamping systems.....	194
8.3.2.5.1	Clamps	194
8.3.2.5.2	Turning plates and T-bars	196
8.3.2.5.3	Arrangement examples	196
8.3.3	Jetting aids.....	197
8.3.3.1	External jetting.....	197
8.3.3.2	Internal jetting.....	198
8.3.3.3	Jetting plant	198
8.3.4	Concrete pumps	199
8.3.5	Machine limits	200
8.3.5.1	Leader-guided.....	200
8.3.5.2	Free-hanging	201
8.3.6	Tool system	201
8.3.6.1	Deep compaction with compaction probe	201
8.3.6.2	Deep compaction with casing	202
8.3.6.2.1	Vibro columns	202
8.3.6.2.2	Vibro-replacement columns.....	203
8.3.6.2.2.1	Casing, receiver hopper and reservoir.....	203
8.3.6.2.2.2	Vibration tips	205
8.3.6.2.3	Vibro concrete columns.....	206
8.3.6.2.3.1	Closed system	206
8.3.6.2.3.2	Open system.....	207
8.3.6.2.4	Geosynthetic-encased vibro columns.....	208
9	Applications of deep compaction processes	211
9.1	Vibro-compaction	211

9.1.1	General	211
9.1.2	Compaction grids.....	212
9.1.3	Compaction methods.....	214
9.1.3.1	Staged extraction	215
9.1.3.2	Compacting and replacing at intervals	216
9.1.3.3	Back-step method	216
9.1.4	Tandem compaction.....	217
9.1.5	Compaction monitoring	219
9.2	Vibro-replacement	220
9.2.1	General	220
9.2.2	Column grids.....	222
9.2.3	Compaction methods.....	225
9.1.5.1	Replacement and compaction scheme	225
9.1.5.2	Processing sequence for vibro-replacement points.....	225
9.2.4	Quality control	226
9.3	Deep compaction with top vibrator	227
9.3.1	Deep compaction with compaction probe	227
9.3.2	Deep compaction with casing	228
9.3.2.1	Vibro columns	228
9.3.2.2	Vibro-replacement columns.....	228
9.3.2.2.1	General	228
9.3.2.2.2	Column grid	228
9.3.2.2.3	Replacement and compaction scheme	229
9.3.2.2.4	Processing sequence for compaction.....	229
9.3.2.2.5	Quality control	230
9.3.2.2.6	Quantity of fill material	231
9.3.2.3	Vibro concrete columns.....	231
9.3.2.4	Geosynthetic-encased vibro columns (GEC).....	233
9.3.2.4.1	General	233
9.3.2.4.2	Examples for the arrangement of geosynthetic-encased vibro columns.....	234
9.3.2.4.3	Column grid	234
9.3.2.4.4	System optimisation	235
9.3.2.4.5	Sealing against confined groundwater	236
10	Dynamic compaction	239
10.1	Process principle	239

10.1.1	Operating principle	239
10.1.2	Procedure	241
10.1.3	Depth effect	242
10.2	Characteristics and application limits	244
10.2.1	Characteristics	244
10.2.2	Application limits	245
10.3	Machinery with equipment.....	246
10.3.1	Carrier machines	246
10.3.2	Machine limits	247
10.3.3	Tool system.....	247
10.3.3.1	Drop weights.....	248
10.3.3.2	Release apparatus	248
11	Rapid impact compaction	251
11.1	Process principle	251
11.2	Characteristics and application limits	252
11.2.1	Characteristics	252
11.2.2	Application limits	253
11.3	Machinery with equipment.....	253
11.3.1	Carrier machines	253
11.3.2	Hammers	255
11.3.3	Machine limits	255
11.3.4	Tool system.....	255
12	Applications of dynamic compaction and rapid impact compaction.....	257
12.1	General.....	257
12.2	Procedure for compaction	257
12.2.1	Point-to-point sequence.....	257
12.2.2	Single back-step method	257
12.2.3	Double back-step method.....	258
12.3	Rehabilitation of embankments.....	258
12.4	Production of crushed stone columns.....	258
12.5	Compaction of waste	260
12.6	Vertical drains as supporting construction measure	261
12.6.1	General	261
12.6.2	Types of vertical drains	261
12.6.3	Installation of prefabricated drains	261

13 IT solutions.....	267
13.1 General.....	267
13.1.1 Digitalisation in construction	267
13.1.2 Digitalisation in deep foundation engineering	267
13.2 Site survey.....	268
13.3 Planning	269
13.3.1 Machine deployment planning.....	269
13.3.2 MyJobsite	270
13.3.3 Lifting deployment planning.....	270
13.3.4 Simulator.....	271
13.4 Operator assistance systems.....	273
13.4.1 Remote control	273
13.4.2 Control monitor	273
13.4.3 Camera systems	274
13.4.4 Positioning system	274
13.4.5 Process data recording	275
13.4.6 Automatic leader adjustment.....	277
13.4.7 Cruise control.....	277
13.4.8 Verticality assistant	277
13.4.9 Reference value control for wet soil mixing	277
13.4.10 Vibro-Assistant	278
13.4.11 Obstacle recognition	278
13.4.12 Free-fall control	279
13.4.13 Automatic winch control.....	279
13.4.14 Ground pressure assistant.....	279
13.4.15 Attachment recognition	280
13.5 Quality management.....	280
13.5.1 MyJobsite	280
13.5.1.1 Planning	281
13.5.1.2 Construction progress.....	281
13.5.1.3 Process data reporting	281
13.5.1.4 Notifications	282
13.5.2 Process data usage	282
13.5.3 Real-time monitoring	283
13.6 Telematics system	283
13.6.1 Machine information	284

13.6.2	Notifications	284
13.6.3	Maintenance	284
13.6.4	Reports	284
13.6.5	Teleservice	285

14 Technical explanations to the Compendium 287

14.1	Carrier machines	287
14.2	Mixing drives and rotary drives.....	287
14.3	Top vibrators.....	288
14.4	Hammers	288
14.5	Technical data	288
14.5.1	Leader length	288
14.5.2	Distance from rotational axis to mixing axis, piling axis and compaction point.....	288
14.5.3	Effective length.....	288
14.5.3.1	Wet soil mixing and dry soil mixing	288
14.5.3.2	Cutter soil mixing.....	289
14.5.3.3	Deep compaction with top vibrator.....	291
14.5.3.4	Deep compaction with vibroflot	292
14.5.4	Vertical leader adjustment.....	293
14.5.5	Boom length	294
14.5.6	Total height.....	294
14.5.7	Hook height	294
14.5.8	Casing length	294
14.5.9	Drop height	294
14.5.10	Load capacity	295
14.5.11	Winch line pull	295
14.6	Machine limits.....	295
14.6.1	General	295
14.6.2	Column diameters and panel measurements for soil mixing.....	295
14.6.2.1	Wet soil mixing	295
14.6.2.2	Dry soil mixing	296
14.6.2.3	Cutter soil mixing.....	296
14.6.3	Column diameters for deep compaction with top vibrator.....	296
14.6.4	Column diameters for deep compaction with vibroflot	296
14.6.4.1	Leader-guided with dry bottom feed vibroflot.....	296
14.6.5	Mixing depths for soil mixing	296

14.6.5.1	Wet soil mixing	297
14.6.5.2	Dry soil mixing	299
14.6.5.3	Cutter soil mixing.....	300
14.6.6	Vibration depths for deep compaction with top vibrator.....	300
14.6.7	Penetration depths for deep compaction with vibroflot	302
14.6.8	Load capacity	303
14.6.9	Crowd force and pull force	303
14.6.10	Line pull Kelly winch	305
14.7	Colour scheme	305
