

|                                                                                         |           |                                                                                   |           |
|-----------------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------|-----------|
| Preface to the 3rd English edition .....                                                | 4         | Protection Circuits for Diodes and Thyristors ....                                | 64        |
| References .....                                                                        | 10        | Components for Surge Protection .....                                             | 65        |
|                                                                                         |           | Cooling of Semiconductor Components .....                                         | 66        |
| <b>Section F: Fundamentals, Physics, Components</b> .....                               | <b>11</b> | <b>Section TM: Technical Documentation, Measuring</b> .....                       | <b>67</b> |
| Symbols in this Book .....                                                              | 12        | Graphical Representation of Characteristics .....                                 | 68        |
| Subscripts and Signs for Formula Symbols in this Book .....                             | 13        | General Technical Drawing .....                                                   | 69        |
| Symbols for Rotating Electrical Machines .....                                          | 14        | Graphical Representation of Bodies .....                                          | 70        |
| Quantities and Units .....                                                              | 15        | Dimension Arrows, Special Representations .....                                   | 71        |
| Mathematical Symbols .....                                                              | 17        | Dimensioning .....                                                                | 72        |
| Exponents, Unit Prefixes, Logarithms, Calculations According to the Rule of Three ..... | 18        | Dimensioning, Hatching .....                                                      | 73        |
| Logarithmic Unit Decibel .....                                                          | 19        | Circuit Diagrams as Function-related Documents .....                              | 74        |
| Angles, Trigonometric Functions, Percentage Calculation .....                           | 20        | Other Function-related Documents .....                                            | 75        |
| Relationships between Trigonometric Functions .....                                     | 21        | Location- and Connection-related Documents .....                                  | 76        |
| Lengths and Areas .....                                                                 | 22        | Code letters of Objects (Equipment) in Circuit Diagrams .....                     | 77        |
| Body and Mass .....                                                                     | 23        | Designation of Components in Circuit Diagrams .....                               | 78        |
| Mass, Force, Pressure, Moment of Force .....                                            | 24        | Use of Reference Designation acc. to DIN EN IEC 81346 in Plants .....             | 80        |
| Rules of Motion .....                                                                   | 25        | Designation of Contacts in Circuit Diagrams .....                                 | 81        |
| Mechanical Work, Mechanical Power, Energy .....                                         | 26        | Circuits and Circuit Symbols .....                                                | 82        |
| Transmissions .....                                                                     | 27        | General Circuit Symbols .....                                                     | 83        |
| Pulleys, Wedges, Winches .....                                                          | 28        | Additional Circuit Symbols, Switches in Energy Plants .....                       | 84        |
| Heat .....                                                                              | 29        | Measuring Instruments and Devices .....                                           | 85        |
| Charge, Voltage, Electric Current, Resistance .....                                     | 30        | Semiconductor Components .....                                                    | 86        |
| Electric Power, Electric Work .....                                                     | 31        | Binary Elements .....                                                             | 87        |
| Electric Field, Capacitor .....                                                         | 32        | Analogue Information Processing, Meters and Tariff Switchgears .....              | 89        |
| Alternating Quantities, Wavelength .....                                                | 33        | Audio Converter, Video Converter and Aerial Systems .....                         | 90        |
| Power of Alternating Sine-wave Current, Pulse .....                                     | 34        | Circuit Symbols for Installation Circuit Diagrams and Installation Diagrams ..... | 91        |
| Magnetic Field, Coil .....                                                              | 35        | Installation Circuit Diagrams .....                                               | 93        |
| Current in the Magnetic Field, Induction .....                                          | 36        | Circuit Symbols for Block Diagrams .....                                          | 94        |
| Resistor Circuits .....                                                                 | 37        | Coils, Transformers, Rotating Generators .....                                    | 95        |
| Reference Arrows, Kirchhoff's Laws, Voltage Dividers .....                              | 38        | Single-phase AC Motors and Starters .....                                         | 96        |
| Potentiometer .....                                                                     | 39        | Three-phase Motors and Starters .....                                             | 97        |
| Equivalent Voltage Source, Equivalent Current Source, Matching .....                    | 40        | Converter-fed Motors .....                                                        | 98        |
| Basic Circuits of Inductances and Capacitances .....                                    | 41        | Comparison of Circuit Symbols .....                                               | 99        |
| Switching Capacitors and Coils .....                                                    | 42        | Marks and Symbols on Electrical Equipment (Examples) .....                        | 101       |
| Series Connection of $R, L, C$ .....                                                    | 43        | Hydraulic and Pneumatic Symbols .....                                             | 102       |
| Parallel Connection of $R, L, C$ .....                                                  | 44        | Symbols in Process Engineering .....                                              | 103       |
| Equivalent Series Connection and Equivalent Parallel Connection .....                   | 45        | Designation for Electropneumatic Controls .....                                   | 104       |
| Simple Filters .....                                                                    | 46        | Electropneumatic Basic Circuits .....                                             | 105       |
| Three-phase Alternating Current .....                                                   | 47        | Preparing Documentation on Equipment and Plants .....                             | 106       |
| Unbalanced Load, Star-delta Conversion, Bridge Circuit .....                            | 48        | Structure and Contents of Operating Instructions .....                            | 107       |
| Unbalanced Similar Loads in Three-phase Alternating Current .....                       | 49        | Electrical Measuring Instruments and Systems .....                                | 108       |
| Resistors and Capacitors .....                                                          | 50        | Pictograms for Measuring .....                                                    | 109       |
| Colour Marking of Resistors and Capacitors .....                                        | 51        | Measuring Circuits for Resistance Calculation .....                               | 110       |
| Types of Resistors and Capacitors .....                                                 | 52        | Measuring Range Extension .....                                                   | 111       |
| Application Groups and Structures of Capacitors .....                                   | 53        | AC/DC Quantity Gathering .....                                                    | 112       |
| Semiconductor Resistors .....                                                           | 54        | Measurements in Electrical Installations .....                                    | 113       |
| Diodes .....                                                                            | 55        | Low-voltage Power Meters .....                                                    | 116       |
| Field Effect Transistors, IGBT .....                                                    | 56        | Electricity Meters, Low-voltage Power Meters .....                                | 117       |
| Bipolar Transistors .....                                                               | 57        | Electronic kWh Meters (Smart Meters) .....                                        | 118       |
| Thyristor .....                                                                         | 58        | Electronic Domestic Meters, Energy Services and SMGw .....                        | 119       |
| Thyristor Types and Trigger Diodes .....                                                | 59        | Oscilloscopes .....                                                               | 120       |
| Rectifier Terms .....                                                                   | 60        | Measurement with the Oscilloscope .....                                           | 121       |
| Types of Packages for Diodes, Transistors and ICs .....                                 | 61        |                                                                                   |           |
| Magnetic Field-dependent Components .....                                               | 62        |                                                                                   |           |
| Photoelectronic Components .....                                                        | 63        |                                                                                   |           |

|                                                          |     |
|----------------------------------------------------------|-----|
| Displacement and Angle Measurement with Sensors .....    | 122 |
| Force and Pressure Measurement with Sensors ..           | 123 |
| Motion Measurement with Sensors .....                    | 124 |
| Temperature Measurement with Sensors .....               | 125 |
| Optoelectronic Proximity Switches (Light Barriers) ..... | 126 |
| Proximity Switches (Sensors) .....                       | 127 |
| Ultrasonic Sensors .....                                 | 128 |
| Other Sensors .....                                      | 129 |
| Connection of Control System Proximity Sensors           | 130 |

## **Section EI: Electrical Installations ..... 131**

|                                                                                 |     |
|---------------------------------------------------------------------------------|-----|
| Qualifications for Performing Electrotechnical Work .....                       | 132 |
| Working on Electrical Installations .....                                       | 133 |
| Workshop Equipment .....                                                        | 134 |
| Cable Installation, Working on Electrical Conductors .....                      | 135 |
| On-off Circuits, Series Connection .....                                        | 136 |
| Two-way Switch Circuits and Intermediate Switch Circuits .....                  | 137 |
| Installing Electrical Circuits in Practice .....                                | 138 |
