1	Introduction.....	1
1.1	Heat Transfer Processes Containing Periodic Oscillations	1
1.1.1	Oscillation Internal Structure of Convective Heat Transfer Processes	1
1.1.2	Problem of Correct Averaging the Heat Transfer Coefficients	3
1.2	Physical Examples	6
1.3	Numerical Modeling of Conjugate Convective–Conductive Heat Transfer	10
1.4	Mechanism of Hydrodynamic Oscillations in a Medium Flowing Over a Body	11
1.4.1	Van Driest Model	11
1.4.2	Periodic Model of the Reynolds Analogy	13
1.4.3	Model of Periodical Contacts	15
1.5	Hydrodynamic HTC	17
1.6	Previous Investigations of Heat Transfer Processes with Periodic Intensity.....	19
1.7	Analytical Methods	19
	References	20
2	Construction of a General Solution of the Problem	25
2.1	Boundary Value Problem for the Heat Conduction Equation.....	25
2.2	Spatial and Temporal Types of Oscillations	28
2.3	Interrelation Between the Two Averaged Coefficients of Heat Transfer.....	29
2.4	Dimensionless Parameters	32
2.5	Factor of Conjugation (FC): An Analysis of Limiting Variants	33
	References	34
3	Solution of Characteristic Problems	37
3.1	Construction of the General Solution	37
3.2	Harmonic Law of Oscillations	39

3.3	Inverse Harmonic Law of Oscillations	45
3.4	Delta-Like Law of Oscillations	53
3.5	Step Law of Oscillations	55
3.6	Comparative Analysis of the Conjugation Effects (Smooth and Step Oscillations)	69
3.7	Particular Exact Solution	70
	References	71
4	Universal Algorithm of Computation of the Factor of Conjugation...	73
4.1	Smooth Oscillations (Approximate Solutions)	73
4.2	BC on a Heat Transfer Surface (Series Expansion in a Small Parameter)	75
4.3	Derivation of a Computational Algorithm	77
4.4	Phase Shift Between Oscillations	80
4.5	Method of a Small Parameter	83
4.6	Application of the Algorithm for an Arbitrary Law of Oscillations	85
4.7	Filtration Property of the Computational Algorithm	91
4.8	Generalized Parameter of the Thermal Effect	92
4.9	Advantages of the Computational Algorithm	93
	References	93
5	Solution of Special Problems	95
5.1	Complex Case of Heating or Cooling	95
5.2	Heat Transfer on the Surface of a Cylinder	102
5.3	Heat Transfer on the Surface of a Sphere	103
5.4	Parameter of Thermal Effect for Different Geometrical Bodies	104
5.5	Overall ATHTC	106
5.5.1	Overall EHTC	106
5.5.2	Bilateral Spatiotemporal Periodicity of Heat Transfer (A Qualitative Analysis)	109
	References	111
6	Step and Nonperiodic Oscillations of the Heat Transfer Intensity	113
6.1	Asymmetric Step Oscillations	113
6.2	Nonperiodic Oscillations	119
	References	122
7	Practical Applications of the Theory	123
7.1	Model Experiment	123
7.2	Dropwise Condensation	124
7.3	Nucleate Boiling	129
7.3.1	Theory of Labuntsov	129
7.3.2	Periodic Model of Nucleate Boiling	131
	References	138

8	Wall's Thermal Effect on Hydrodynamic Flow Stability	141
8.1	Flow of a Liquid with Supercritical Parameters in a Heated Channel	141
8.2	Density Wave Instability Phenomena	142
8.3	Scenario of Evolution of the Density Wave Instability	148
8.4	Basic Equations of the Density Wave Instability	149
8.5	Computation of Wall's Thermal Effect	150
8.6	Analytical Problem Solution	151
	References	158
9	Periodical Model of Turbulent Heat Transfer	159
9.1	Surface Rejuvenation Model	159
9.1.1	Investigation of Turbulent Heat Transfer by Means of the Bursting Effect	159
9.1.2	Variable Thermophysical Properties of Fluid	160
9.2	Method of Relative Correspondence	162
9.3	Integral Methods for Simulation of Heat and Mass Transfer in a Boundary Layer	165
9.4	Differential Equation for the Heat Flux	167
9.4.1	Exact Solution	167
9.4.2	Approximate Analytical Solution	168
9.4.3	Validation of the Method. Laminar Boundary Layer	171
9.5	Supercritical Pressures Region	173
9.5.1	Thermophysical Properties	173
9.5.2	Generalization of the Results	176
