Preface *xxxi*

### Part I Plasma Fundamentals: Kinetics, Thermodynamics, Fluid Mechanics, and Electrodynamics 1

<b>Lecture 1</b>	<b>The Major Component of the Universe, the Cornerstone of Microelectronics, The High-Tech Magic Wand of Technology</b>	<b>3</b>
1.1	The Forth State of Matter: Plasma in Nature, in Lab, in Technology	3
1.2	Multiple Plasma Temperatures, Plasma Nonequilibrium, Thermal and Nonthermal Plasmas	5
1.3	Plasma Sources: Nonthermal, Thermal, and Transitional “Warm” Discharges, Discharges in Gases and Liquids	6
1.4	Plasma Processes: Major Plasma Components, High Selectivity and Controllability of Nonequilibrium Reactions, “Multidisciplinarity Without Borders”	9
1.5	Plasma Technologies: The Cornerstone of Microelectronics, the Major Successes Stories	10
1.6	Electric Energy Consumption as a Challenge of Plasma Technologies, Plasma is the Future Because the Future is Electric	13
1.7	Plasma Today is a High-Tech Magic Wand of Modern Technology	14
<b>Lecture 2</b>	<b>Elementary Processes of Charged Particles in Plasma</b>	<b>17</b>
2.1	Elementary Charged Plasma Species and Their Transformation Pathways	17
2.2	Fundamental Characteristics and Parameters of Elementary Processes	18
2.3	Classification of Ionization Processes, Elastic Scattering and Energy Transfer in Coulomb Collisions	20
2.4	Direct Ionization of Atoms and Molecules by Electron Impact: Thomson Formula, Franck–Condon Principle	22
2.5	Stepwise Ionization by Electron Impact	23
2.6	Ionization by High-energy Electron Beams; Photoionization	24
2.7	Ionization in Collisions of Heavy Particles: Adiabatic Principle, Massey Parameter, Penning Ionization	25
2.8	Losses of Charged Particles: Mechanisms of Electron–Ion Recombination	26
2.9	Electron Losses in Electronegative Gases, Electron Attachment Processes	28
2.10	Electron Detachment from Negative Ions	32
2.11	Losses of Charged Particles: Mechanisms of Ion–Ion Recombination	33
2.12	Ion-molecular Processes: Polarization Collisions, Langevin Capture	37
2.13	Resonant and Nonresonant Ion-atomic Charge Transfer Processes	38
2.14	Ion-molecular Reactions with Rearrangement of Chemical Bonds, Plasma Catalysis	40
2.15	Problems and Concept Questions	41
2.15.1	Maxwell–Boltzmann Distribution Function	41
2.15.2	Positive and Negative Ions	41

2.15.3	<i>Direct Ionization by Electron Impact</i>	41
2.15.4	<i>Stepwise Ionization</i>	41
2.15.5	<i>Electron Beam Propagation in Gases</i>	41
2.15.6	<i>Ionization in Ion-Neutral Collisions, Massey Parameter</i>	41
2.15.7	<i>Dissociative Electron-Ion Recombination</i>	41
2.15.8	<i>Dissociative Attachment</i>	41
2.15.9	<i>Detachment by Electron Impact</i>	42
2.15.10	<i>Langevin Capture Cross Section</i>	42
2.15.11	<i>Nonresonant Charge Exchange</i>	42
<b>Lecture 3</b>	<b>Elementary Processes of Excited Atoms and Molecules in Plasma</b>	<b>43</b>
3.1	<i>Vibrational Excitation of Molecules by Electron Impact</i>	43
3.2	<i>Rate Coefficients of Vibrational Excitation in Plasma, Fridman Approximation</i>	44
3.3	<i>Rotational Excitation of Molecules by Electron Impact</i>	46
3.4	<i>Electronic Excitation by Electron Impact: Metastable States, Dissociation of Molecules</i>	47
3.5	<i>Distribution of Electrons Energy in Nonthermal Discharges Between Different Channels of Excitation and Ionization</i>	50
3.5.1	<i>Elastic vs Inelastic Collisions</i>	50
3.5.2	<i>Exclusive Contribution of Discharge Energy to Vibrational Excitation</i>	50
3.5.3	<i>Effect of Superelastic Collisions on Contribution of Discharge Energy to Vibrational Excitation</i>	51
3.5.4	<i>Contribution of Electron Attachment, Electronic Excitation, and Ionization Processes</i>	51
3.6	<i>Vibrational-to-translational Energy Transfer Processes, VT-relaxation</i>	52
3.6.1	<i>Slow Adiabatic VT-relaxation of Harmonic Oscillators</i>	52
3.6.2	<i>VT-relaxation Rate Coefficients for Harmonic Oscillators, Landau-Teller Formula</i>	53
3.6.3	<i>VT-relaxation of Anharmonic Oscillators</i>	54
3.6.4	<i>Fast Nonadiabatic Mechanisms of VT-relaxation</i>	55
3.7	<i>Vibrational Energy Exchange Between Molecules, VV-relaxation</i>	56
3.7.1	<i>VV-relaxation Close to Resonant</i>	56
3.7.2	<i>VV-relaxation of Anharmonic Oscillators</i>	58
3.7.3	<i>Intermolecular VV'-relaxation</i>	58
3.8	<i>VT- and VV-relaxation of Highly Vibrationally Excited Polyatomic Molecules</i>	59
3.8.1	<i>Shchuryak Model of Transition to the Vibrational Quasi-continuum</i>	60
3.8.2	<i>VT-relaxation of Polyatomic Molecules in Vibrational Quasi-continuum</i>	60
3.8.3	<i>VV-exchange of Polyatomic Molecules in Vibrational Quasi-continuum</i>	61
3.9	<i>Rotational Relaxation Processes, Parker Formula</i>	62
3.10	<i>Relaxation of Electronically Excited Atoms and Molecules</i>	62
3.10.1	<i>Relaxation of Electronic Excitation (ET Process)</i>	62
3.10.2	<i>The Electronic Excitation Energy Transfer Processes</i>	63
3.11	<i>Elementary Chemical Reactions of Excited Molecules</i>	63
3.11.1	<i>Arrhenius Formula for Excited Molecules</i>	63
3.11.2	<i>Activation Energy</i>	64
3.12	<i>Efficiency of Vibrational Energy in Overcoming Activation Energy of Chemical Reactions, Fridman-Macheret <math>\alpha</math>-formula</i>	64
3.12.1	<i>Efficiency <math>\alpha</math> of Molecular Excitation Energy</i>	64
3.12.2	<i>Fridman-Macheret <math>\alpha</math>-formula</i>	64
3.12.3	<i>Reactions Proceeding Through Intermediate Complexes</i>	66
3.12.4	<i>Chemical Reactions of Two Vibrationally Excited Molecules</i>	67
3.13	<i>Nonequilibrium Dissociation of Molecules with Essential Contribution of Vibrational and Translational Energy</i>	67
3.14	<i>Problems and Concept Questions</i>	68
3.14.1	<i>Multi-quantum Vibrational Excitation by Electron Impact</i>	68
3.14.2	<i>Influence of Vibrational Temperature on Electronic Excitation Rate Coefficients</i>	68

- 3.14.3     *Dissociation of Molecules Through Electronic Excitation by Direct Electron Impact*    69
- 3.14.4     *Distribution of Electron Energy Between Different Channels of Excitation and Ionization*    69
- 3.14.5     *VT-relaxation Rate Coefficient as a Function of Vibrational Quantum Number*    69
- 3.14.6     *The Resonant Multi-quantum VV-exchange*    69
- 3.14.7     *VV-relaxation of Polyatomic Molecules*    69
- 3.14.8     *Transition to the Vibrational Quasi-continuum*    69
- 3.14.9     *Rotational RT-relaxation*    69
- 3.14.10    *LeRoy Formula and  $\alpha$ -model*    69
- 3.14.11    *Contribution of Translational Energy in Dissociation of Molecules Under Nonequilibrium Conditions*    69

**Lecture 4   Physical Kinetics and Transfer Processes of Charged Particles in Plasma    71**

- 4.1     Boltzmann Kinetic Equation for Distribution Functions of Charged Particles: Vlasov Equation, Collisional Integral, Quasi-equilibrium Maxwellian EEDF    71
- 4.2     Microscopic Consequences of the Boltzmann Kinetic Equation: Continuity, Momentum, and Energy Conservation Equations    72
  - 4.2.1    *The Continuity Equation*    72
  - 4.2.2    *The Momentum Conservation Equation*    73
  - 4.2.3    *The Energy Conservation Equation*    73
- 4.3     The Fokker–Planck Kinetic Equation for the Electron Energy Distribution Functions (EEDF)    74
- 4.4     Maxwellian, Druyvesteyn, and Margenau Electron Energy Distribution Functions    75
  - 4.4.1    *Maxwellian Distribution*    75
  - 4.4.2    *Druyvesteyn Distribution*    76
  - 4.4.3    *Margenau Distribution*    76
- 4.5     Effect of Electron–molecular and Electron–electron Collisions on EEDF    76
- 4.6     Relations Between Electron Temperature  $T_e$  and the Reduced Electric Field  $E/n_0$     78
- 4.7     Plasma Electron Conductivity: Isotropic and Anisotropic Parts of EEDF    78
- 4.8     Joule Heating and Electron Mobility, Similarity Parameters in Nonthermal Discharges    80
- 4.9     Plasma Conductivity in Crossed Electric and Magnetic Fields    81
- 4.10    Electric Conductivity of the Strongly Ionized Plasma    82
- 4.11    Ion Energy and Ion Drift in Electric Field    83
- 4.12    Free Diffusion of Electrons and Ions and Continuity Equation for Charged Particles; Fick’s Law and Einstein Relation Between Diffusion, Mobility, and Mean Energy    83
- 4.13    Ambipolar Diffusion, Debye Radius, and Definition of Plasma    84
- 4.14    Problems and Concept Questions    86
  - 4.14.1    *The Fokker–Planck Kinetic Equation*    86
  - 4.14.2    *The Druyvesteyn Electron Energy Distribution Function*    86
  - 4.14.3    *The Margenau EEDF*    86
  - 4.14.4    *Effect of Vibrational Temperature on EEDF*    86
  - 4.14.5    *Electron–Electron Collisions and EEDF Maxwellization*    86
  - 4.14.6    *Similarity Parameters*    86
  - 4.14.7    *Electron Drift in the Crossed Electric and Magnetic Fields*    86
  - 4.14.8    *Plasma Rotation in the Crossed Electric and Magnetic Fields, Plasma Centrifuge*    87
  - 4.14.9    *Ambipolar Diffusion*    87
  - 4.14.10    *Debye Radius and Ambipolar Diffusion*    87

**Lecture 5   Physical and Chemical Kinetics of Excited Atoms and Molecules in Plasma    89**

- 5.1     Excitation Energy Distribution in Nonequilibrium Plasma: Vibrational Kinetics, Fokker–Planck Kinetic Equation for Vibrational Distribution Functions    89
- 5.2     VT- and VV-fluxes of Excited Molecules in Energy Space    89
  - 5.2.1    *Energy-space-diffusion Related to VT-relaxation*    89
  - 5.2.2    *Energy-space-diffusion Related to VV-exchange*    90
  - 5.2.3    *The Linear VV-flux Component*    91
  - 5.2.4    *The Nonlinear Flux Component*    91

5.3	Nonequilibrium Vibrational Distribution Functions Dominated by VV-exchange, the Treanor Distribution	92
5.4	Vibrational Distributions at the Strong Excitation Regime Dominated by Nonlinear Resonant VV-exchange, the Hyperbolic Plateau Distribution	94
5.5	Steady-state Vibrational Distributions Controlled by Linear VV- and VT-relaxation Processes in Weak Excitation Regime, the Gordiets Distribution	95
5.6	Direct Effect of Vibrational Excitation by Electron Impact on the Nonequilibrium Vibrational Distribution Functions	96
5.7	Nonequilibrium Vibrational Distributions of Polyatomic Molecules	96
5.8	Macro-kinetics of Chemical Reactions of Vibrationally Excited Molecules	99
5.9	Macro-kinetics of Vibrational Energy Losses Due to VT- and VV-relaxation	100
5.10	Vibrational Kinetics in Gas Mixtures, Treanor Isotopic Effect	102
5.11	Physical Kinetics of Population of Electronically Excited States in Plasma	105
5.12	Physical Kinetics of the Rotationally Excited Molecules, Canonical Invariance	106
5.13	Nonequilibrium Translational Energy Distribution Functions, Effect of “Hot Atoms”	107
5.13.1	Effect of “Hot Atoms” in Fast VT-relaxation Processes	107
5.13.2	Diagnostics of Nonequilibrium Molecular Gases Based on the Effect of “Hot Atoms” in Fast VT-relaxation	108
5.13.3	Generation of “Hot Atoms” in Fast Chemical Reactions	108
5.14	Problems and Concept Questions	109
5.14.1	Diffusion of Molecules Along the Vibrational Energy Spectrum	109
5.14.2	Flux of Molecules and Flux of Quanta Along the Vibrational Energy Spectrum	109
5.14.3	Hyperbolic Plateau Distribution Function	109
5.14.4	eV-flux Along the Vibrational Energy Spectrum	109
5.14.5	Treanor Effect for Polyatomic Molecules	109
5.14.6	Treanor to Boltzmann Transition in Vibrational Distributions of Polyatomic Molecules	109
5.14.7	VV- and VT-losses of Vibrational Energy of Highly Excited Molecules	109
5.14.8	Treanor Formula for Isotopic Mixtures	109
5.14.9	Coefficient of Selectivity for Separation of Heavy Isotopes	109
5.14.10	“Hot Atoms” Generated in Fast VT-relaxation	110
<b>Lecture 6</b>	<b>Plasma Statistics and Thermodynamics, Heat and Radiation Transfer Processes</b>	<b>111</b>
6.1	Complete (CTE) and Local (LTE) Thermodynamic Equilibrium in Plasma, Boltzmann Quasi-equilibrium Statistical Distribution	111
6.2	Saha Ionization Equilibrium, Planck Formula, Stefan–Boltzmann Law, and Other Thermal-plasma-related Statistical Distributions	112
6.2.1	Saha Equation for Ionization Equilibrium in Thermal Plasma	112
6.2.2	Statistical Relations for Radiation: Planck Formula, Stefan–Boltzmann Law	113
6.2.3	Statistical Distribution of Diatomic Molecules Over Vibrational–Rotational States	113
6.2.4	Dissociation Equilibrium in Molecular Gases	114
6.3	Thermodynamic Functions in Quasi-equilibrium Thermal Plasma: Partition Functions, Internal Energy, Helmholtz Free Energy, Gibbs Energy, Debye Corrections	114
6.4	Nonequilibrium Statistics and Thermodynamics of Thermal and Nonthermal Plasma Systems	115
6.4.1	Two-Temperature Statistics and Thermodynamics	115
6.4.2	Strongly Nonequilibrium Thermodynamics of Plasma Gasification; Single Excited State Approach	116
6.4.3	Nonequilibrium Two-Temperature Statistics of Vibrationally Excited Molecules, the Treanor Distribution	117
6.5	Thermal Conductivity in Quasi-equilibrium Plasma, Effect of Dissociation and Ionization on Plasma Heat Transfer	117
6.6	Nonequilibrium Effects in Thermal Conductivity	119
6.6.1	Fast Transfer of Vibrational Energy in Nonequilibrium Plasma ( $T_v \gg T_0$ ): The Treanor Effect in Transfer Processes	119

6.6.2	<i>Effect of Nonresonant VV-Exchange Close to the Vibrational-Translational (VT) Equilibrium</i>	120
6.6.3	<i>Nonequilibrium Effects Related to Recombination and Specific Heat</i>	120
6.7	Emission and Absorption of Continuous Spectrum Radiation in Plasma, Bremsstrahlung, and Radiative Electron–Ion Recombination Processes	120
6.8	Absorption of Continuous Spectrum Radiation in Plasma: the Kramers and Unsold-Kramers Formulas	122
6.9	Radiation Transfer in Plasma: Optically Thin and Optically Thick Systems, Plasma as a Gray Body	122
6.10	Spectral Line Radiation in Plasma: Intensity, Natural Width, and Profile of Spectral Lines	124
6.11	The Doppler, Pressure, and Stark Broadening of Spectral Lines	126
6.11.1	<i>Doppler Broadening</i>	126
6.11.2	<i>Pressure Broadening</i>	126
6.11.3	<i>Stark Broadening</i>	127
6.11.4	<i>Convolution of Lorentzian and Gaussian Profiles, the Voigt Profile of Spectral Lines</i>	128
6.12	Emission and Absorption of Radiation in Spectral Lines	128
6.12.1	<i>Spectral Emissivity of a Line</i>	128
6.12.2	<i>Selective Absorption of Radiation in Spectral Lines</i>	128
6.12.3	<i>The Oscillator Power</i>	129
6.13	Radiation Transfer in Spectral Lines	129
6.14	Inverse Population of Excited States in Nonequilibrium Plasmas and Principle of Laser Generation	130
6.15	Problems and Concept Questions	130
6.15.1	<i>Average Vibrational Energy</i>	130
6.15.2	<i>Ionization Equilibrium, the Saha Equation</i>	130
6.15.3	<i>The Treanor Effect in Vibrational Energy Transfer</i>	130
6.15.4	<i>Vibrational-translational VT Nonequilibrium Caused by the Specific Heat Effect</i>	130
6.15.5	<i>Total Plasma Emission in Continuous Spectrum</i>	131
6.15.6	<i>Natural Profile of Spectral Lines</i>	131
6.15.7	<i>Doppler Broadening of Spectral Lines</i>	131
6.15.8	<i>Pressure Broadening of Spectral Lines</i>	131
6.15.9	<i>Absorption of Radiation in a Spectral Line by One Classical Oscillator</i>	131
6.15.10	<i>Inverse Population of Excited States and the Laser Amplification Coefficient</i>	131
<b>Lecture 7</b>	<b>Plasma Electrostatics and Electrodynamics, Waves in Plasma</b>	<b>133</b>
7.1	Ideal and Nonideal Plasmas, Plasma Polarization and Debye Shielding of Electric Field	133
7.2	Quasi-neutral Plasma vs Sheath, Physics of DC Sheaths	134
7.3	Plasma Sheath Models: High Voltage Sheaths, Matrix, and Child Law Sheaths	136
7.4	Electrostatic Plasma Oscillations, Langmuir Frequency	137
7.5	Plasma Skin Effect, Penetration of Slow-changing Fields into Plasma	138
7.6	Electrostatic Plasma Waves and Their Collisional Damping	138
7.7	Ionic Sound in Plasma	139
7.8	Magnetohydrodynamic Waves: Alfvén Velocity, Alfvén Wave, Magnetic Sound	140
7.9	Collisionless Interaction of Electrostatic Plasma Waves with Electrons, the Landau Damping, the Beam, and Buneman Kinetic Instabilities	140
7.10	Dielectric Permittivity and Conductivity of Plasma in High-frequency Electric Fields	142
7.11	Propagation, Absorption, and Total Reflection of Electromagnetic Waves in Plasma: Bouguer Law and Critical Electron Density	143
7.12	Nonlinear Waves in Plasma: Modulation Instability, Lighthill Criterion, and Korteweg–de Vries Equation	145
7.13	Langmuir Solitons in Plasma	147
7.14	Nonlinear Ionic Sound, Evolution of Strongly Nonlinear Oscillations	148
7.15	Problems and Concept Questions	149
7.15.1	<i>Ideal and Nonideal Plasmas</i>	149

- 7.15.2 *Charged Particles Inside Debye Sphere* 149
- 7.15.3 *Floating Potential* 149
- 7.15.4 *Matrix and Child Law Sheaths* 149
- 7.15.5 *Electrostatic Plasma Waves* 149
- 7.15.6 *Ionic Sound* 150
- 7.15.7 *Landau Damping* 150
- 7.15.8 *High-frequency Dielectric Permittivity of Plasma* 150
- 7.15.9 *Solitons as Solutions of the Korteweg–de Vries Equation* 150
- 7.15.10 *Nonlinear Ionic Sound* 150
- 7.15.11 *Velocity of the Nonlinear Ionic-sound Waves* 150
- 7.15.12 *The Ionic Sound Solitons* 150
- Lecture 8 Plasma Magneto-hydrodynamics, Fluid Mechanics and Acoustics** 151
  - 8.1 Plasma Magneto-hydrodynamics (MHD): Magnetic Field “Diffusion” in Plasma, Frozenness of Magnetic Field in Plasma 151
  - 8.2 Plasma Equilibrium in Magnetic Field: Magnetic Pressure and Pinch Effect 152
  - 8.3 Two-fluid Plasma MHD and the Generalized Ohm’s Law 153
  - 8.4 The Generalized Ohm’s Law and Plasma Diffusion Across Magnetic Field 154
  - 8.5 Magnetic Reynolds Number and Alfven Velocity: Conditions for Magneto-hydrodynamic (MHD) Behavior of Plasma 155
  - 8.6 Electromagnetic Wave Propagation in Magnetized Plasma 156
  - 8.7 Ordinary and Extra-ordinary Polarized Electromagnetic Waves in Magnetized Plasma, Effect of Ionic Motion 157
  - 8.8 Dispersion and Amplification of Acoustic Waves in Nonequilibrium Plasma 158
    - 8.8.1 *Acoustic Waves in Molecular Gas at Equilibrium (Without Sound  $T_v = T_o$ )* 159
    - 8.8.2 *Acoustic Waves in Nonequilibrium ( $T_v > T_o$ ) Plasma, High-frequency Limit* 159
    - 8.8.3 *Acoustic Wave Dispersion in the Presence of Intensive Plasma-chemical Reaction* 160
  - 8.9 Evolution of Shock Waves in Plasma 161
  - 8.10 Nonthermal Plasma Fluid Mechanics in Fast Subsonic and Supersonic Flows 162
  - 8.11 Vibrational Relaxation in Fast Subsonic and Supersonic Flows of Nonthermal Reactive Plasmas 164
  - 8.12 Spatial Nonuniformity and Space Structure of Unstable Vibrational Relaxation in Chemically Active Plasma 167
  - 8.13 Elements of Plasma Aerodynamics: Plasma Interaction with Fast Flows and Shocks, Ionic Wind 169
  - 8.14 Problems and Concept Questions 170
    - 8.14.1 *Magnetic Field Frozen in Plasma* 170
    - 8.14.2 *Magnetic Pressure and Plasma Equilibrium in Magnetic Field* 170
    - 8.14.3 *The Magnetic Reynolds Number* 171
    - 8.14.4 *Critical Heat Release in Supersonic Flows* 171
    - 8.14.5 *Electromagnetic Waves in Magnetized Plasma* 171
    - 8.14.6 *Profiling of Nonthermal Discharges in Supersonic Flow* 171
    - 8.14.7 *Dynamics of Vibrational Relaxation in Transonic Flows* 171
    - 8.14.8 *Space-nonuniform Vibrational Relaxation* 171
    - 8.14.9 *Comparison of Linear and Nonlinear Approaches to Evolution of Perturbations* 171
    - 8.14.10 *Generation of Strong Shock Waves and Detonation Waves in Plasma* 171

**Part II Plasma Physics and Engineering of Electric Discharges** 173

- Lecture 9 Electric Breakdown, Steady-state Discharge Regimes, and Instabilities** 175
  - 9.1 Electric Breakdown of Gases, the Townsend Mechanism 175
  - 9.2 The Paschen Curves: Critical Breakdown Conditions, Breakdown of Larger Gaps and Effect of Electronegative Gases 176
  - 9.3 Spark Breakdown Mechanism, Physics of Avalanches and Streamers 179

9.4	Meek Criterion of the Avalanche-to-streamer Transition and Spark Breakdown, Streamer Propagation Models, Concept of Leaders in Very Long Gaps	182
9.5	Steady-state Regimes of Nonequilibrium Discharges Controlled by Volume Reactions of Charged Particles and Surface Recombination Processes	184
9.6	Steady-state Discharges Controlled by Volume Reactions of Charged Particles: Regimes Controlled by Electron–Ion Recombination, and by Electron Attachment	185
9.6.1	<i>Regime Controlled by Electron–Ion Recombination</i>	185
9.6.2	<i>Discharge Regime Controlled by Electron Attachment</i>	186
9.7	Steady-state Discharges Controlled by Diffusion of Charged Particles to the Walls with Following Surface Recombination: the Engel–Steenbeck Relation	186
9.8	Propagation of Nonthermal Discharges, Ionization Waves	187
9.9	Nonequilibrium Behavior of Electron Gas: Electron-neutrals Temperature Difference, Deviations from the Saha Ionization Degree	189
9.10	Instabilities of Nonthermal Plasmas: Striations and Contractions, Ionization-overheating Thermal Instability in Monatomic Gases	190
9.11	Ionization-overheating Thermal Instability in Molecular Gases with Significant Vibrational Excitation, Effect of Plasma-chemical Reactions	191
9.12	Electron Attachment Instability and Other Ionization Instabilities of Nonthermal Plasma	194
9.12.1	<i>Attachment Instability</i>	194
9.12.2	<i>Ionization Instability Controlled by Dissociation of Molecules</i>	195
9.12.3	<i>The Stepwise Ionization Instability</i>	195
9.12.4	<i>Electron Maxwellization Instability</i>	195
9.12.5	<i>Instability in Fast Oscillating Fields</i>	195
9.13	Problems and Concept Questions	195
9.13.1	<i>Effect of Electron Attachment on Breakdown Conditions</i>	195
9.13.2	<i>Energy Input and Temperature in Streamers</i>	195
9.13.3	<i>Streamer Propagation Velocity</i>	196
9.13.4	<i>Attachment-controlled Discharge Regime</i>	196
9.13.5	<i>The Engel–Steenbeck Model</i>	196
9.13.6	<i>Ionization Wave Propagation</i>	196
9.13.7	<i>Thermal Instability in Monatomic Gases</i>	196
9.13.8	<i>Electron Attachment Instability</i>	196
<b>Lecture 10</b>	<b>Nonthermal Plasma Sources: Glow Discharges</b>	<b>197</b>
10.1	Major Types of Electric Discharges, Glow Discharge as a Conventional Nonthermal Plasma Source	197
10.2	Plasma Parameters and Glow Pattern along the Glow Discharge	199
10.3	Current–Voltage Characteristics of DC-discharges: Transition from Townsend Dark Discharge to Glow Discharge	200
10.4	Cathode Layer of Glow Discharge, Engel–Steenbeck Model and Current–Voltage Characteristics	203
10.5	The Normal Regime of Glow Discharges, Steenbeck Minimum Power Principle for Normal Cathode Current Density	204
10.6	Abnormal, Subnormal, and Obstructed Glow Discharge Regimes; the Hollow Cathode Discharge	206
10.7	About Anode Layer of Glow Discharges	207
10.8	Positive Column of Glow Discharges: Current–Voltage Characteristics and Heat Balance	208
10.9	Glow Discharge Instabilities: Contraction of the Positive Column	210
10.10	Glow Discharge Instabilities: The Striations	211
10.11	About Energy Efficiency of Plasma-chemical Processes in Glow Discharges, Approaches to Glow Discharge Stabilization, Atmospheric Pressure Glow Discharges	213
10.12	Glow Discharges in Strong Magnetic Field: Penning Discharge, Plasma Centrifuge	214
10.13	Magnetron Glow Discharges, Magnetic Mirror Effect	216
10.14	Problems and Concept Questions	217

- 10.14.1 *Space Charges in Cathode and Anode Layers* 217
- 10.14.2 *The Seeliger's Rule for Spectral Line Emission Sequence in Negative and Cathode Glows* 217
- 10.14.3 *Glow Discharge in Tubes of Complicated Shapes* 217
- 10.14.4 *Normal Cathode Potential Drop, Normal Current Density, and Normal Thickness of Cathode Layer* 217
- 10.14.5 *Glow Discharge with Hollow Cathode* 218
- 10.14.6 *Contraction of Glow Discharge in Fast Gas Flow* 218
- 10.14.7 *The Penning Discharge* 218
- 10.14.8 *The Alfven Velocity in Plasma Centrifuge* 218
- 10.14.9 *The Escape Cone Angle in Magnetic Mirror* 218
- 10.14.10 *Atmospheric Pressure Glow Discharges* 218

**Lecture 11 Thermal Plasma Sources: Arc Discharges** 219

- 11.1 *Arc Discharge as a Conventional Thermal Plasma Source: Types of Arcs, Plasma Parameters* 219
  - 11.1.1 *Hot Thermionic Cathode Arcs* 219
  - 11.1.2 *Arcs with Hot Cathode Spots* 219
  - 11.1.3 *Vacuum Arcs* 220
  - 11.1.4 *High Pressure Arc Discharges* 220
  - 11.1.5 *Low Pressure Arc Discharges* 220
- 11.2 *Electron Emission from Hot Cathode: Thermionic Emission, Sommerfeld formula, Schottky effect* 220
- 11.3 *Electron Emission from Cathode: Field, Thermionic Field, and Secondary Electron Emission Processes* 223
- 11.4 *Cathode Layer of Arc Discharges: Physics and General Features* 224
- 11.5 *Energy Balance of Cathode and Anode Layers: Electrode Erosion, Cathode Spots* 227
- 11.6 *Positive Column of Arc Discharges: Elenbaas-Heller Equation, Steenbeck and Raizer "Channel" Models* 228
- 11.7 *Plasma Temperature, Specific Power, Electric Field, and Radius of the Arc Positive Column* 231
- 11.8 *Arc Dynamics: Bennet Pinch, Electrode Jets* 233
- 11.9 *Engineering Configurations of Arc Discharges* 234
- 11.10 *Gliding Arcs: Physics of the Flat Discharge Configuration* 236
- 11.11 *Nonequilibrium Gliding Arcs, Fast Equilibrium-to-Nonequilibrium Transition* 239
- 11.12 *Gliding Arc Stabilized in Reverse Vortex (Tornado) Flow, and Other Special Gliding Arc Configurations* 240
- 11.13 *Problems and Concept Questions* 243
  - 11.13.1 *The Sommerfeld Formula for Thermionic Emission* 243
  - 11.13.2 *Secondary Electron Emission* 243
  - 11.13.3 *Erosion of Hot Cathodes* 243
  - 11.13.4 *Radiation of the Arc Positive Column* 243
  - 11.13.5 *Arc Temperature in the Frameworks of the Channel Model* 243
  - 11.13.6 *Difference Between Electron and Gas Temperatures in Arc Discharges* 243
  - 11.13.7 *Electrode Jet Velocity* 243
  - 11.13.8 *Stabilization of Linear Arcs Near Axis of the Discharge Tube* 243
  - 11.13.9 *Critical Length of Gliding Arc Discharge* 243
  - 11.13.10 *Quasi-Unstable Phase of Gliding Arc Discharge* 243

**Lecture 12 Radio-frequency, Microwave, and Optical Discharges** 245

- 12.1 *Thermal Plasma Generation in High-frequency Electromagnetic Fields* 245
- 12.2 *Thermal Plasma of Inductively Coupled RF Discharges, Metallic Cylinder Model* 246
- 12.3 *Plasma Temperature and Power of the Thermal ICP Discharges* 247
- 12.4 *Specific Configurations of Atmospheric Pressure RF ICP and RF CCP Discharges* 249
- 12.5 *Microwave Sources of Thermal Plasma* 250
- 12.6 *Thermal Plasma Generation in Continuous Optical Discharges* 253

12.7	Radio-frequency (RF) Sources of Nonequilibrium Plasma, Capacitively Coupled Plasma (CCP), and Inductively Coupled Plasma (ICP) Discharges	254
12.8	Fundamentals of Nonthermal Capacitively Coupled Plasma (CCP) Discharges	255
12.9	Nonthermal RF Capacitively Coupled Plasma (CCP) Discharges of Moderate Pressure, $\alpha$ - and $\gamma$ discharge Regimes	258
12.10	Low-pressure Capacitively Coupled Plasma (CCP) RF discharges	261
12.11	Asymmetric and Magnetron RF CCP Discharges at Low Pressures	264
12.12	Nonthermal Radio-frequency (RF) Inductively Coupled Plasma (ICP) Discharges	267
12.13	Planar Coil and Helical Resonator Configurations of the Low-pressure RF ICP discharges	268
12.14	Nonthermal Wave-heated Plasma Sources: Electron–cyclotron Resonance (ECR) Microwave Discharges	270
12.15	Helicon and Surface-wave High-density Plasma (HDP) Discharges	272
12.16	Problems and Concept Questions	274
12.16.1	<i>Microwave Discharge in <math>H_{01}</math>-mode of Rectangular Waveguide</i>	274
12.16.2	<i>Equivalent Circuit of RF CCP Discharge</i>	274
12.16.3	<i>Critical Current of the <math>\alpha - \gamma</math> Transition in moderate pressure CCP</i>	274
12.16.4	<i>Stochastic Heating Effect</i>	274
12.16.5	<i>Current Density Distribution in ICP Discharges</i>	274
12.16.6	<i>Equivalent Circuit of ICP Discharges</i>	275
12.16.7	<i>Plasma Density in ICP Discharges</i>	275
12.16.8	<i>ECR-microwave Absorption Zone</i>	275
<b>Lecture 13</b>	<b>Atmospheric Pressure Cold Plasma Discharges: Corona, Dielectric Barrier Discharge (DBD), Atmospheric Pressure Glow (APG), Plasma Jet</b>	<b>277</b>
13.1	Physics of Continuous Corona Discharges	277
13.2	Continuous Corona: Current–Voltage Characteristics and Discharge Power	279
13.3	Pulsed Corona Discharges	280
13.4	Dielectric-barrier Discharges (DBD): General Features and Configurations, Filamentary DBD Mode	282
13.5	Nanosecond-pulsed Dielectric-barrier Discharges (DBD), Uniform DBD Mode	284
13.6	Time-evolution of the Short-pulsed DBD: Pulse Energy and Average Discharge Power, the “Maximum Power Principle”	287
13.7	Asymmetric, Packed-bed, Ferroelectric, and Other Dielectric-surface Discharges	289
13.8	Atmospheric Pressure Glow Discharges (APG)	291
13.9	Noble-gas-based RF Atmospheric Pressure Plasma Jets (APPJ)	292
13.10	Atmospheric Pressure DBD-based Helium Plasma Jets, Plasma Bullets	293
13.11	Problems and Concept Questions	294
13.11.1	<i>Active Corona Volume</i>	294
13.11.2	<i>Power of Continuous Corona Discharges</i>	295
13.11.3	<i>Voltage Rise Rate in Pulse Corona Discharges</i>	295
13.11.4	<i>Maximum vs Minimum Power Principles in Theory of Plasma Discharges</i>	295
13.11.5	<i>Power Control of Nanosecond-pulsed Dielectric Barrier Discharges</i>	295
13.11.6	<i>Evolution of the DBD Surface “Pancakes” vs DBD Streamers</i>	295
13.11.7	<i>Atmospheric Pressure RF vs DBD Plasma Jets</i>	295
13.11.8	<i>Helium Plasma Jets</i>	295
13.11.9	<i>Power of the DBD Plasma Jets</i>	295
<b>Lecture 14</b>	<b>Nonequilibrium Transitional “Warm” Discharges: Nonthermal Gliding Arc, Moderate-pressure Microwave Discharge, Different Types of Sparks and Microdischarges</b>	<b>297</b>
14.1	Nonthermal Gliding Arc as an Example of the Nonequilibrium Atmospheric Pressure Transitional “Warm” Plasma Sources	297

14.2	Nonequilibrium Transitional “Warm” Microwave Discharges of Moderate Pressures	297
14.3	Vibrational–Translation Nonequilibrium ( $T_v > T_0$ ) in Transitional “Warm” Microwave Discharges of Moderate Pressures	300
14.4	Spark Discharges	303
14.5	Spark Discharge in Nature: Lightning	304
14.6	Pin-to-hole Discharge (PHD)	305
14.7	Microdischarges: Atmospheric-pressure Micro-glow Discharge, Micro-hollow-cathode Discharge	306
14.8	Other DC, kHz-frequency, RF, Microwave Microdischarges, and Their Arrays	308
14.9	Problems and Concept Questions	310
14.9.1	Transitional “Warm” Discharges	310
14.9.2	Combined Regime of Moderate Pressure Microwave Discharges	310
14.9.3	Pressure Dependence of Energy Efficiency of Microwave Discharges	310
14.9.4	Power and Flow Rate Scaling of Moderate Pressure Microwave Discharges	310
14.9.5	Velocity of the Back Ionization Wave	310
14.9.6	Negative Ions Attachment to Water Droplets, Charge Separation in Thundercloud	310
14.9.7	Propagation of Ball Lightning	310
14.9.8	Pin-to-hole (PHD) Plasma Source	310
14.9.9	Atmospheric-pressure Micro-glow Discharge	310
<b>Lecture 15</b>	<b>Ionization and Discharges in Aerosols; Dusty Plasma Physics; Electron Beams and Plasma Radiolysis</b>	<b>311</b>
15.1	Photoionization of Aerosols in Monochromatic and Continuous Spectrum Radiation	311
15.2	Thermal Ionization of Aerosols: Einbinder Formula, Langmuir Relation	313
15.3	Electric Breakdown of Aerosols	314
15.3.1	Pulse Breakdown of Aerosols	315
15.3.2	Breakdown of Aerosols in High-frequency Electromagnetic Fields	316
15.3.3	Townsend Breakdown of Aerosols	316
15.3.4	Effect of Macro-particles on Vacuum Breakdown	316
15.4	Steady-state DC Discharges in Heterogeneous Medium	316
15.5	Dusty Plasma Structures: Coulomb Crystals and Phase Transitions	318
15.6	Oscillations and Waves in Dusty Plasmas, Ionic Sound, and Dust Sound	319
15.7	Electron Beam Plasmas: Generation, Propagation, Properties	320
15.7.1	Powerful Electron Beam in Low-pressure Gas	321
15.7.2	Low-current Electron Beam in Rarefied Gas	321
15.7.3	Moderate-current Electron Beam in a Moderate Pressure Gas	321
15.7.4	High Power Electron Beam in a High-pressure Gas	321
15.8	Kinetics of Electron Beam Degradation Processes, Degradation Spectrum	322
15.9	Plasma-beam Discharge, Plasma-beam Centrifuge	324
15.10	Non-self-sustained High-pressure Cold Discharges Supported by High-energy Electron Beams	325
15.11	Plasma in Tracks of Nuclear Fission Fragments, Plasma Radiolysis	326
15.12	G-Factors, Plasma-radiolytic Effects in Water Vapor and Carbon Dioxide	328
15.13	Dusty Plasma Generation by Relativistic Electrons, Radioactive Dusty Plasma	328
15.14	Problems and Concept Questions	329
15.14.1	Electron Density Due to Monochromatic Photoionization of Aerosols	329
15.14.2	Thermal Ionization of Aerosols	329
15.14.3	“Melting” of Coulomb Crystals	329
15.14.4	Ionization Energy Cost Due to Irradiation by High-energy Electrons	329
15.14.5	Degradation Spectrum vs EEDF	330
15.14.6	Energy Cost of Ionization and Excitation by Electron Beams	330
15.14.7	Initial Tracks of Nuclear Fission Fragments	330
15.14.8	Plasma Radiolysis of Carbon Dioxide	330

**Lecture 16 Electric Discharges in Water and Other Liquids 331**

- 16.1 Plasma Generation in Liquid Phase 331
- 16.2 Major Conventional Breakdown Mechanisms and Discharge Characteristics in Water 332
- 16.3 Nonequilibrium Nanosecond-pulsed Plasma in Water Without Bubbles 333
- 16.4 Nonequilibrium Nanosecond-pulsed Plasma Without Bubbles in Different Liquids: Comparison of Discharges in Water and PDMS 334
- 16.5 Characterization of the Nano-second Pulsed Discharges in Liquid: Shadow Imaging, Optical Emission Spectroscopy 337
- 16.6 Streamer Formation in Liquids and Nonequilibrium Nanosecond-pulsed Liquid Plasma Without Bubbles 338
- 16.7 Cryogenic Liquid Plasma, Nanosecond-pulsed Discharge in Liquid Nitrogen 339
- 16.8 Plasmas in Supercritical Fluids, Electric Breakdown of Supercritical CO<sub>2</sub> 341
- 16.9 Problems and Concept Questions 342
- 16.9.1 *Effect of Electric Conductivity on Breakdown of Water* 342
- 16.9.2 *Increment of the Thermal Breakdown Instability for Electric Breakdown of Water* 342
- 16.9.3 *Breakdown Voltage of Water* 342
- 16.9.4 *Generation of Nano-plasma by Nano-corona* 342
- 16.9.5 *Comparison of Negative and Positive Pulsed Corona Discharges in Liquids Without Bubbles* 342
- 16.9.6 *The Dark Phase Effect During Evolution of the Nano-second Pulsed Discharge in Liquids* 342
- 16.9.7 *Modified Meek's Criterion for Breakdown of Liquids* 342
- 16.9.8 *Nanosecond-pulsed Discharge in Liquid N<sub>2</sub>, Synthesis of Polymeric Nitrogen* 342
- 16.9.9 *Breakdown of Supercritical Fluids* 342

**Part III Plasma in Inorganic Material Treatment, Energy Systems, and Environmental Control 343**

**Lecture 17 Energy Balance and Energy Efficiency of Plasma-chemical Processes, Plasma Dissociation of CO<sub>2</sub> 345**

- 17.1 Energy Efficiency as a Key Requirement of Large-scale Plasma Processes: Comparison of Quasi-equilibrium and Nonequilibrium Plasmas 345
- 17.2 Energy Efficiency of Chemical Processes Stimulated in Plasma by Vibrational Excitation of Molecules, Electronic Excitation, and Dissociative Attachment 346
- 17.3 Energy Balance and Energy Efficiency of Plasma Processes Stimulated by Vibrational Excitation; Excitation, Relaxation, and Chemical Components of Total Energy Efficiency 346
- 17.4 Energy Efficiency of Quasi-equilibrium Chemical Processes in Thermal Plasmas: Absolute, Ideal, and Surfer-ideal Quenching of Products 348
- 17.5 Mass and Energy Transfer in Multi-component Thermal Plasmas, and its Effect on Energy Efficiency of Quasi-equilibrium Plasma-chemical Processes 351
- 17.6 CO<sub>2</sub> Dissociation in Plasma: Crucial Fundamental and Applied Aspects of the Process in Thermal, Nonthermal, and Transitional Discharges 353
- 17.7 About Mechanisms of CO<sub>2</sub> Dissociation in Plasma 355
- 17.8 Physical Kinetics of CO<sub>2</sub> Dissociation in Nonthermal Plasma Stimulated by Vibrational Excitation of the Molecules 357
- 17.9 Vibrational Kinetics and Energy Balance in Nonequilibrium CO<sub>2</sub> Plasma 359
- 17.10 CO<sub>2</sub> Dissociation in Supersonic Cold Plasma Flows 360
- 17.11 Gas-dynamic Stimulation of CO<sub>2</sub> Dissociation in Supersonic Flow Without Plasma, "Plasma Chemistry Without Electricity" 362
- 17.12 Complete Plasma Dissociation of CO<sub>2</sub> to Carbon and Oxygen 363
- 17.13 Problems and Concept Questions 364

17.13.1	<i>Energy Efficiency of Quasi-equilibrium and Nonequilibrium Plasma Processes</i>	364
17.13.2	<i>Plasma-chemical Processes Stimulated by Vibrational Excitation</i>	364
17.13.3	<i>Absolute and Ideal Quenching of Products in Thermal Plasma</i>	364
17.13.4	<i>Super-ideal Quenching due to Vibrational–Translational Nonequilibrium</i>	365
17.13.5	<i>Super-ideal Quenching Effects Related to Selectivity of Transfer Processes</i>	365
17.13.6	<i>CO<sub>2</sub> Dissociation Through Electronic Excitation of Molecules in Cold Plasma</i>	365
17.13.7	<i>Transition of Highly Vibrationally Excited CO<sub>2</sub> Molecules into Vibrational Quasi-continuum</i>	365
17.13.8	<i>One-vibrational-temperature Approximation of CO<sub>2</sub> Dissociation Kinetics</i>	365
17.13.9	<i>Plasma-stimulated Disproportioning of CO, and Complete Dissociation of CO<sub>2</sub> with Production of Elementary Carbon</i>	365

## **Lecture 18 Synthesis of Nitrogen Oxides, Ozone, and Other Gas-phase Plasma Synthetic and Decomposition Processes** 367

18.1	Plasma-chemical Synthesis of Nitrogen Oxides from Air: Fundamental and Applied Aspects of the Process in Thermal and Nonthermal Discharges	367
18.2	Mechanisms and Energy Efficiencies of NO Synthesis from Air in Nonthermal and Thermal Plasmas, the Zeldovich Mechanism	368
18.3	Elementary Zeldovich Reaction of NO Synthesis Stimulated by Vibrational Excitation of Nitrogen Molecules	369
18.4	Kinetics and Energy Balance of Plasma-chemical NO Synthesis in O <sub>2</sub> –N <sub>2</sub> Mixtures Stimulated by Vibrational Excitation	372
18.5	Stability of Products of Plasma-chemical NO Synthesis to Reverse Reactions, Effect of “Hot” Nitrogen Atoms and Surface Stabilization	373
18.6	Plasma-chemical Synthesis of Ozone: Fundamental and Applied Aspects of the Process	374
18.7	Plasma-chemical Ozone Generation in Oxygen	375
18.8	Plasma-chemical Ozone Generation in Air	376
18.9	Stability of Plasma-generated Ozone: Negative Effects of Temperature, Water Vapor, Hydrogen, Hydrocarbons, and Other Admixtures	377
18.10	Major Specific Configurations of Plasma Ozone Generators	379
18.11	Ozone Generation in Pulsed Corona Discharges, Energy Efficiency of the Process	379
18.12	Plasma Synthesis of KrF <sub>2</sub> and Other Fluorine-based Compounds of Noble Gases	381
18.13	Plasma F <sub>2</sub> Dissociation and Synthesis of Aggressive Fluorine-based Oxidizers	383
18.14	Plasma-chemical Synthesis of Hydrazine (N <sub>2</sub> H <sub>4</sub> ) and Ammonia (NH <sub>3</sub> )	384
18.15	Plasma-chemical Synthesis of Polyphosphoric Nitrides (P <sub>6</sub> N <sub>6</sub> ), Polymeric Nitrogen, Cyanides, and Some Other Inorganic Compounds	385
18.16	Gas-phase Plasma Decomposition of Inorganic Triatomic Molecules NH <sub>3</sub> , SO <sub>2</sub> , N <sub>2</sub> O	386
18.17	Dissociation of Hydrogen Halides, Hydrogen, Nitrogen, and Other Diatomic Molecules in Thermal and Nonthermal Plasmas	387
18.18	Problems and Concept Questions	388
18.18.1	<i>Rate Coefficient of Reaction O + N<sub>2</sub> → NO + N Stimulated by Vibrational Excitation</i>	388
18.18.2	<i>Energy Efficiency of NO Synthesis in Plasma</i>	389
18.18.3	<i>Conversion Degree Limitations of NO Synthesis in Plasma</i>	389
18.18.4	<i>Discharge Poisoning Effect During Ozone Synthesis</i>	389
18.18.5	<i>Temperature Effect on Ozone Stability</i>	389
18.18.6	<i>Negative Effect of Humidity on Ozone Generation in DBD</i>	389
18.18.7	<i>Positive Effect of N<sub>2</sub> and CO Admixtures to Oxygen on Plasma-chemical Ozone Synthesis</i>	389
18.18.8	<i>Plasma-chemical KrF<sub>2</sub> Synthesis with Product Stabilization in a Krypton Matrix</i>	389
18.18.9	<i>Plasma Synthesis of NH<sub>3</sub> and N<sub>2</sub>H<sub>4</sub></i>	389

## **Lecture 19 Plasma Metallurgy: Production and Processing of Metals and their Compounds** 391

19.1	Hydrogen-based Reduction of Iron Ore in Thermal Plasma: Using Hydrogen and Hydrocarbons, Plasma-chemical Steel Manufacturing	391
------	--	-----

19.2	Hydrogen-based Reduction of Refractory Metal Oxides in Thermal Plasma, Plasma Metallurgy of Tungsten and Molybdenum	392
19.3	Thermal Plasma Reduction of Oxides of Aluminum and Other Inorganic Elements	393
19.4	Reduction of Metal Oxides Using Nonthermal Hydrogen Plasma, Nonequilibrium Plasma Effect of Surface Heating and Evaporation	394
19.5	Thermal Plasma Production of Metals by Carbothermic Reduction of Their Oxides: Pure Metallic Uranium, Niobium, Iron, Refractory, and Rare Metals	396
19.6	Direct Decomposition of Oxides to High-purity Elements in Thermal Plasma: Production of Aluminum, Vanadium, Indium, Germanium, and Silicon	397
19.7	Hydrogen-plasma Reduction of Metals, Metalloids, and Other Elements from Their Halides: Production of Boron, Niobium, Uranium, etc.	400
19.8	Direct Thermal Plasma Decomposition of Uranium Hexafluoride and Other Halides	402
19.9	Direct Decomposition of Halides and Reduction of Metals in Nonthermal Plasma	402
19.10	Synthesis of Nitrides and Carbides of Inorganic Materials in Thermal Plasmas	403
19.11	Plasma-chemical Production of Inorganic Oxides by Thermal Decomposition of Minerals, Aqueous Solutions, and Conversion Processes	404
19.12	Production of Inorganic Oxides by Conversion of Relevant Halides with Water or Oxygen in Thermal Plasma	406
19.13	Plasma-chemical Synthesis of Hydrides, Borides, and Carbonyls of Inorganic Materials	406
19.14	Plasma-metallurgical High-temperature Material Processing Technologies: Plasma Cutting, Plasma Welding, and Plasma Melting	408
19.15	Plasma Powder Metallurgy: Plasma Spheroidization and Densification of Powders	409
19.16	Problems and Concept Questions	410
19.16.1	<i>Plasma Reduction of Metal Oxides with Hydrogen</i>	410
19.16.2	<i>Depth of Metal Oxide Reduction Layer in Nonthermal Hydrogen Plasma</i>	410
19.16.3	<i>Nonequilibrium Surface Heating in Plasma Treatment of Thin Layers</i>	410
19.16.4	<i>Application of Arcs vs. RF-ICP Discharges in Plasma Metallurgy</i>	410
19.16.5	<i>Halides in Plasma Metallurgy</i>	410
19.16.6	<i>Quenching Rate for Direct Plasma Reduction of Metallic Uranium from <math>UF_6</math></i>	410
19.16.7	<i>Decomposition of Titanium Tetrachloride <math>TiCl_4</math> to Metallic Titanium in Nonthermal Plasmas</i>	410
19.16.8	<i>Production of Uranium Oxides by Decomposition of the Uranyl Nitrate <math>[UO_2(NO_3)_2]</math> Aqueous Solutions</i>	410

**Lecture 20 Plasma Powders, Micro- and Nano-technologies: Plasma Spraying, Deposition, Coating, Dusty Plasma-chemistry** 411

20.1	Plasma Spraying of Powders as One of the Key Thermal Spray Technologies	411
20.2	DC-Arc Plasma Spray: Air Plasma Spray, VPS, LPPS, CAPS, SPS, UPS, and Other Specific Plasma Spray Approaches	411
20.3	Radio Frequency (RF) Thermal Plasma Sprays	413
20.4	Thermal Plasma Spraying of Monolithic Materials	413
20.5	Thermal Plasma Spraying of Composite Materials	414
20.6	Thermal Plasma Spraying of Functionally Gradient Materials (FGMs), Reactive Plasma Spray Forming	416
20.7	Microarc (Electrolytic Spark) Oxidation Coating: Aluminum Coating in Sulfuric Acid	417
20.8	Plasma Chemistry of the Microarc Oxidative Coating of Aluminum in Concentrated Sulfuric Acid Electrolyte	418
20.9	Direct Micro-patterning, Micro-fabrication, Micro-deposition, Micro-etching, and Surface Modification in Atmospheric Pressure Nonequilibrium Plasma Microdischarges	420
20.10	Nanoparticles in Cold Plasma, Physics and Kinetics of Dusty Plasma in Low-pressure RF Silane Discharges	422
20.11	Physical and Chemical Kinetics of Dust Nanoparticles Formation in Plasma: A Story of “Birth and Catastrophic Life”	423

20.12	Plasma Synthesis of Aluminum Nano-powders, Luminescent Silicon Quantum Dots, and Nano-composite Particles	425
20.13	Plasma Synthesis of Highly Organized Carbon Nanostructures: Plasma Synthesis of Fullerenes	425
20.14	Plasma Nanotechnology: Synthesis of Nanotubes, and Nanotube Surface Modification	427
20.15	Problems and Concept Questions	429
20.15.1	<i>Thermal Plasma Spraying of Powders</i>	429
20.15.2	<i>Underwater Thermal Plasma Spraying (UPS)</i>	429
20.15.3	<i>Radio Frequency (RF) Thermal Plasma Sprays</i>	429
20.15.4	<i>Microarc (Electrolytic Spark) Oxidation Coating</i>	429
20.15.5	<i>Trapping of Neutral Nanoparticles in Low-pressure Silane Plasma</i>	429
20.15.6	<i>The <math>\alpha</math>-<math>\gamma</math> Transition During Coagulation of Nanoparticles in Silane Plasma</i>	429
20.15.7	<i>Plasma Synthesis of Nano-powders</i>	429
<b>Lecture 21 Plasma Processing in Microelectronics and Other Micro-technologies: Etching, Deposition, and Ion Implantation Processes</b>		
21.1	Plasma Etching as a Part of Integrated Circuit Fabrication: Etch Rate, Anisotropy, and Selectivity Requirements	431
21.2	Basic Plasma Etch Processes: Sputtering, Pure Chemical Etching, Ion-energy Driven Etching, Ion-enhanced Inhibitor Etching	433
21.3	Plasma Sources Applied for Etching and Other Material Processing: RF-CCP Discharges, RF-Diodes and Triodes, MERIE, Reactive Ion Etchers (RIE), High-density Plasma (HDP) Sources	434
21.4	Kinetics of Etch Processes and Discharges: Surface Kinetics of Etching, Densities, and Fluxes of Ions and Neutral Etchants	435
21.5	Gas-phase Composition in Plasma Etching, Etchants-to-unsaturates Flux Ratio	437
21.6	Atomic Fluorine and Chlorine-based Plasma Etching of Silicon, Flamm Formulas, and Doping Effect	438
21.7	Plasma Etching of Silicon in $\text{CF}_4$ Discharges: Competition Between Etching and Carbon Deposition	438
21.8	Plasma Etching of Silicon Oxide ( $\text{SiO}_2$ ) and Nitride ( $\text{Si}_3\text{N}_4$ ), Aluminum, Photoresists, and Other Materials	439
21.9	Plasma Cleaning of Chemical Vapor Deposition (CVD) and Etching Reactors, In-situ Cleaning in Micro-electronics, and Other Active and Passive Cleaning Processes	440
21.10	Remote Plasma Cleaning in Microelectronics, Choice of Cleaning Feedstock Gases	441
21.11	Plasma-enhanced Chemical Vapor Deposition (PECVD), Amorphous Si-film Deposition	442
21.12	PECVD of Silicon Oxide ( $\text{SiO}_2$ ) and Silicon Nitride ( $\text{Si}_3\text{N}_4$ ) Films, Conformal and Non-conformal Deposition in Trenches, Atomic Layer Deposition (ALD)	446
21.13	Sputter Deposition Processes: Physical and Reactive Sputtering	447
21.14	Ion Implantation Processes, Ion-beam Implantation	448
21.15	Plasma-immersion Ion Implantation (PIII)	449
21.16	Problems and Concept Questions	452
21.16.1	<i>Anisotropy Requirements for Plasma Etching</i>	452
21.16.2	<i>Sputtering</i>	452
21.16.3	<i>Etching Anisotropy Analysis in the Framework of Surface Kinetics of Plasma Etching</i>	452
21.16.4	<i>Etching Anisotropy as a Function of Discharge Power</i>	452
21.16.5	<i>Flamm Formulas for F-atom Silicon Etching</i>	452
21.16.6	<i>Competition Between Silicon Etching and Carbon Film Deposition in <math>\text{CF}_4</math> Discharges</i>	452
21.16.7	<i>Rate of Amorphous Silicon Film Deposition in Silane (<math>\text{SiH}_4</math>) Discharges</i>	452
21.16.8	<i>Non-conformal Deposition of <math>\text{SiO}_2</math> Within Trenches During PECVD Process in <math>\text{SiH}_4</math>-<math>\text{O}_2</math> Mixture</i>	452
21.16.9	<i>Conformal and Non-conformal Deposition in Trenches</i>	453
21.16.10	<i>Plasma-assisted Atomic Layer Deposition (PA-ALD)</i>	453

**Lecture 22 Plasma Fuel Conversion and Hydrogen Production, Plasma Catalysis 455**

- 22.1 Plasma-assisted Production of Hydrogen from Gaseous Hydrocarbons: Partial Oxidation, Water-vapor Conversion, Dry ( $\text{CO}_2$ ) Reforming, Direct Pyrolysis, Two Concepts of Plasma Catalysis 455
- 22.2 Plasma-catalytic Syngas Production from Methane and Other Gaseous Hydrocarbons by Partial Oxidation in Nonthermal “Tornado” Gliding Arcs and Other Discharges 456
- 22.3 Plasma-catalytic Syngas Production in Mixtures of  $\text{CH}_4/\text{H}_2\text{O}$  (Steam Reforming) and  $\text{CH}_4/\text{H}_2\text{O}$  (Dry Reforming) 458
- 22.4 Direct Decomposition (Pyrolysis) of Methane and Other Gaseous Hydrocarbons, Plasma-catalytic Effects in the Pyrolysis, the Winchester Mechanism 459
- 22.5 Plasma Partial Oxidation and Steam-reforming of Liquid Fuels: On-board Generation of Hydrogen-rich Gases, Reforming of Kerosene, Ethanol, Aviation and Diesel Fuels, Gasoline, Renewable Biomass, Waste-to-energy Processes 461
- 22.6 Combination of Plasma and Catalysis in Hydrogen Production from Hydrocarbons: Plasma Pre-processing and Post-processing, Plasma Treatment of Catalysts 462
- 22.7 Plasma-chemical Conversion of Coal, Plasma Coal Pyrolysis, Coal Conversion in Thermal Plasma Jets 463
- 22.8 Thermal Plasma Jet Pyrolysis of Coal in Relatively Inert Gases ( $\text{Ar}$ ,  $\text{N}_2$ ,  $\text{H}_2$ ): Production of Acetylene ( $\text{C}_2\text{H}_2$ ), Hydrogen Cyanide ( $\text{HCN}$ ), Transformation of Sulfur- and Nitrogen-compounds of Coal 464
- 22.9 Coal Gasification Using Thermal Plasma Discharges: Partial Oxidation, Steam, and Dry Reforming Processes 466
- 22.10 Energy and Hydrogen Production from Hydrocarbons with Carbon Bonding in Solid Suboxides without  $\text{CO}_2$  Emission 467
- 22.11 Plasma-chemical Conversion of Coal and Methane into Suboxides for Production of Hydrogen and Energy without  $\text{CO}_2$  Emission 468
- 22.12 Plasma-assisted Liquefaction of Natural Gas, Direct  $\text{CH}_4$  Incorporation into Nonsaturated Liquid Hydrocarbon Fuels 469
- 22.13  $\text{H}_2\text{S}$  Decomposition in Plasma with Production of Hydrogen and Elemental Sulfur: Fundamental and Technological Aspects, Energy Efficiency in Different Plasma Systems 470
- 22.14 Nonequilibrium Kinetics of  $\text{H}_2\text{S}$  Decomposition in Plasma: Nonequilibrium Clusterization in Centrifugal Field, Effect of Additives 472
- 22.15 Dissociation of Water Vapor and Direct  $\text{H}_2$  Production in Plasma: Fundamental and Applied Aspects, Mechanisms and Energy Efficiency of the Process 475
- 22.16 Hydrogen Production from Water in Double-step Plasma-chemical Cycles, Plasma Chemistry of  $\text{CO}_2\text{-H}_2\text{O}$  Mixture 476
- 22.17 Problems and Concept Questions 478
- 22.17.1 *Plasma Catalysis of Hydrogen Production by Direct Decomposition (Pyrolysis) of Ethane* 478
- 22.17.2 *Plasma-stimulated Partial Oxidation of Liquid Fuel into Syngas ( $\text{CO-H}_2$ )* 478
- 22.17.3 *Gasification of Coal by Water Vapor in Thermal Plasma Jet* 478
- 22.17.4 *Plasma Conversion of Coal into Carbon Suboxides without  $\text{CO}_2$  Emission* 479
- 22.17.5 *Plasma Dissociation of  $\text{H}_2\text{S}$  with production of Hydrogen and Elemental Sulfur* 479
- 22.17.6 *Reverse Reactions and Explosion of Products of Plasma Dissociation of Water Vapor* 479
- 22.17.7 *Contribution of Dissociative Attachment to  $\text{H}_2\text{O}$  Dissociation in Nonthermal Plasma* 479
- 22.17.8  *$\text{H}_2\text{O}$  Dissociation in Nonequilibrium Supersonic Plasma with Formation of  $\text{H}_2$  and Stabilization of Peroxide in Products* 479

**Lecture 23 Plasma Energy Systems: Ignition and Combustion, Thrusters, High-speed Aerodynamics, Power Electronics, Lasers, and Light Sources 481**

- 23.1 Plasma-assisted Ignition and Stabilization of Flames: Ignition of Fast Transonic and Supersonic Flows, Sustaining Stable Combustion in Low-speed Flows 481

23.2	Mechanisms and Kinetics of Nonequilibrium Plasma-stimulated Combustion, Ignition Below the Auto-ignition Limit	483
23.3	Subthreshold Plasma Ignition, Kinetics of Plasma “Ignition Below the Auto-ignition Limit”	484
23.3.1	<i>Subthreshold Plasma Ignition Initiated Thermally: the “Bootstrap” Effect</i>	484
23.3.2	<i>Subthreshold Ignition Initiated by Plasma-generated Excited Species</i>	485
23.3.3	<i>Subthreshold Ignition Initiated by Plasma-generated Neutrals like NO and CH<sub>2</sub>O</i>	485
23.3.4	<i>Contribution of Ions to the Subthreshold Ignition</i>	486
23.4	Plasma-assisted Ignition and Combustion in Ram/Scram Jet Engines, Energy Efficiency of Transonic and Supersonic Ignition	486
23.5	Plasma Ignition and Stabilization of Combustion of Pulverized Coal: Application for Boiler Furnaces	487
23.6	Ion and Plasma Thrusters: Electric Propulsion, Specific Impulse of Electric Rocket Engines	487
23.7	Electric Rocket Engines Based on Ion and Plasma Thrusters: Operation of Ion Thrusters, Ion Acceleration Mechanisms, Classification of Major Plasma Thrusters	489
23.8	Electrothermal, Electrostatic, Magneto-plasma-dynamic, and Pulsed Plasma Thrusters	490
23.9	Plasma Aerodynamics, Plasma Interaction with High-Speed Flows and Shocks	491
23.10	Plasma Effects on Boundary Layers, Aerodynamic Plasma Actuators, Plasma Flow Control	493
23.11	Plasma Power Electronics: Magneto-hydrodynamic (MHD) Generators, Plasma Thermionic Converters	494
23.12	Gas-discharge Communication and Special Devices, Plasma Metamaterials	496
23.13	Plasma in Lasers: Classification of Lasers, Inversion Mechanisms, Lasers on Self-limited Transitions, Ionic Gas-discharge Ar and He–Ne Lasers	497
23.14	Plasma Lasers: Inversion in Plasma Recombination, He–Cd, Penning, and Other Lasers	498
23.15	Molecular Lasers on Vibrational-rotational Transitions, CO <sub>2</sub> , and CO Lasers, Excimer Lasers, Chemical Lasers	499
23.16	Plasma Sources of Radiation with High Spectral Brightness, Plasma Lighting: Mercury-containing and Mercury-free Lamps	500
23.17	Plasma Display Panels and Plasma TV	502
23.18	Problems and Concept Questions	503
23.18.1	<i>Radical-thermal “Bootstrap” Effect in the Subthreshold Plasma-ignition of Hydrogen</i>	503
23.18.2	<i>Contribution of Vibrationally and Electronically Excited Molecules into Plasma Stimulated Ignition of H<sub>2</sub>–Air Mixtures</i>	503
23.18.3	<i>Energy Requirements for Plasma Ignition in Ram/Scramjet Engines</i>	503
23.18.4	<i>The Electric Propulsion Systems Decrease the Required Mass of the Spacecraft</i>	503
23.18.5	<i>Optimal Specific Impulse of Electric Propulsion Systems (Ion and Plasma Thrusters)</i>	503
23.18.6	<i>Optimal Specific Impulse Dependence on the Thrust</i>	503
23.18.7	<i>Plasma Aerodynamics</i>	503
23.18.8	<i>Plasma as a Metamaterial</i>	503
<b>Lecture 24</b>	<b>Plasma in Environmental Control: Cleaning of Air, Exhaust Gases, Water, and Soil</b>	<b>505</b>
24.1	Exhaust Gas Cleaning from SO <sub>2</sub> : Fundamental and Applied Aspects, Application of Relativistic Electron Beams and Coronas	505
24.2	Kinetics and Energy Balance of Plasma-catalytic Ion-molecular Chain Oxidation of SO <sub>2</sub> to SO <sub>3</sub> in Airflow	506
24.3	Plasma-stimulated Combined Oxidation of NO <sub>x</sub> and SO <sub>2</sub> in Air: Simultaneous Industrial Exhaust Gas Cleaning from Nitrogen and Sulfur Oxides	507
24.4	Plasma-assisted After-treatment of Automotive Exhaust, Double-stage Plasma-catalytic NO <sub>x</sub> , and Hydrocarbon Remediation	507
24.5	Nonthermal Plasma Abatement of Volatile Organic Compounds (VOC) in Air, Plasma Cleaning of Emission from Paper Mills and Wood Processing Plants	509
24.6	Nonthermal Plasma Air Cleaning from Acetone, Methanol, Dimethyl Sulfide (DMS), α-Pinene, and Chlorine-containing VOC	510

24.7	Treatment of Large-scale Exhaust Gases from Paper Mill and Wood Processing Plants by Wet Pulsed Corona: Combination of Plasma VOC Cleaning with Wet Scrubbing	511
24.8	Nonthermal Plasma Removal of Elemental Mercury from Coal-fired Power Plant Emissions, and Other Industrial Off-gases	512
24.9	Plasma Decomposition of Freons (Chlorofluorocarbons) and Other Gaseous Waste Treatment Processes in Thermal and Transitional “Warm” Discharges	514
24.10	Plasma Decontamination of Water: Fundamental and Applied Aspects, Suppression of Hazardous Organic Compounds, Challenges of Energy Cost	515
24.11	Plasma-induced Water Softening, Mechanisms of Removal of Hydrocarbonates from Water	516
24.12	Plasma-induced Cleaning of Produced and Flowback Fracking Water	517
24.13	Plasma Water Cleaning from PFOS/PFOA and Other Perfluoro-alkyl-substances (PFAS, the “Forever Chemicals”)	518
24.14	Plasma Chemistry of PFAS Mineralization in Water: Mechanisms and Energy Balance	519
24.15	Plasma Environmental Cleaning of Soil: Destruction of PFAS Compounds, Vitrification of Contaminated Radioactive Soil, and Other Related Solid Waste Treatment Technologies	521
24.16	Problems and Concept Questions	521
24.16.1	<i>Application of Relativistic Electron Beams in Exhaust Gas Cleaning</i>	521
24.16.2	<i>Plasma-catalytic Ion-molecular Chain Oxidation of SO<sub>2</sub> to SO<sub>3</sub> in Airflow</i>	521
24.16.3	<i>Plasma-stimulated Combined Oxidation of NO<sub>x</sub> and SO<sub>2</sub> in Air</i>	521
24.16.4	<i>VOC Removal from Exhaust Gases Using Wet Pulsed Corona Discharge</i>	522
24.16.5	<i>Plasma-induced Mechanisms of Destruction of the Organic Compounds in Water</i>	522
24.16.6	<i>Plasma-induced Water Softening, Removal of Hydrocarbonates from Water</i>	522
24.16.7	<i>Plasma Chemistry of PFAS Mineralization in Water</i>	522
24.16.8	<i>Plasma Environmental Cleaning of PFAS Contaminated Soil</i>	522

#### Part IV Organic and Polymer Plasma Chemistry, Plasma Medicine, and Agriculture 523

##### Lecture 25 Organic Plasma Chemistry: Synthesis and Conversion of Organic Materials and Their Compounds, Synthesis of Diamonds and Diamond Films 525

25.1	Thermal Plasma Pyrolysis of Methane: The Kassel Mechanism, the Westinghouse Process, Co-production of Acetylene and Ethylene	525
25.2	Thermal Plasma Pyrolysis of Higher Hydrocarbons	526
25.3	Technologies Based on Thermal Plasma Pyrolysis of Hydrocarbons: Production of Vinyl Chloride and Production of Acetylene by Carbon Reactions with Hydrogen and Natural Gas	527
25.4	Thermal Plasma Technology of Pyrolysis of Hydrocarbons with Production of Soot and Hydrogen	529
25.5	Nonthermal Plasma Conversion of Methane into Acetylene: Contribution of Vibrational Excitation, Energy Efficiency of the Process	529
25.6	Other Processes of Decomposition, Elimination, and Isomerization of Hydrocarbons in the Nonequilibrium Plasma Chemistry	530
25.7	Thermal Plasma Synthesis and Conversion of Nitrogen-organic Compounds: Production of C <sub>2</sub> N <sub>2</sub> from Carbon and Nitrogen; Co-production of HCN and C <sub>2</sub> H <sub>2</sub> from Methane and Nitrogen	531
25.8	Nonthermal Plasma Production of Hydrogen Cyanide (HCN) from Methane and Nitrogen	531
25.9	Other Thermal and Nonthermal Plasma Processes of Synthesis and Conversion of the Organic Nitrogen Compounds	532
25.10	Organic Plasma Chemistry of Chlorine Compounds	534
25.11	Organic Plasma Chemistry of Fluorine Compounds	535
25.12	Thermal and Nonthermal Plasma Processing of Chlorofluorocarbons (CFCs)	536
25.13	Direct Plasma Synthesis of Methanol and Formaldehyde by Oxidation of Methane	537
25.14	Nonthermal Plasma Synthesis of Aldehydes, Alcohols, Organic Acids, and Other Organic Compounds in Mixtures of Carbon Oxides with Hydrogen and Water	538
25.15	Plasma-chemical Synthesis of Diamonds and Diamond Films	539

25.16	Mechanisms of Major Plasma-volume and Surface Processes Leading to the Plasma-chemical Diamond-film Growth	541
25.17	Problems and Concept Questions	542
25.17.1	<i>Plasma Synthesis of Organic Compounds from Methane</i>	542
25.17.2	<i>The Kassel Mechanism of Methane Conversion in Thermal Plasma</i>	542
25.17.3	<i>Westinghouse Thermal Plasma Process of Natural Gas Conversion</i>	542
25.17.4	<i>Mechanism of the Thermal Plasma Production of Soot from Hydrocarbons</i>	543
25.17.5	<i>Direct Plasma Synthesis of Methanol and Formaldehyde by Oxidation of Methane</i>	543
25.17.6	<i>Nonthermal Plasma Synthesis of Formic Acid in CO<sub>2</sub>-H<sub>2</sub>O Mixture</i>	543
25.17.7	<i>Plasma-chemical Synthesis of Diamonds and Diamond Films</i>	543
<b>Lecture 26</b>	<b>Plasma Polymerization, Processing of Polymers, Treatment of Polymer Membranes</b>	<b>545</b>
26.1	Plasma-chemical Polymerization of Hydrocarbons: Formation of Thin Polymer Films, Mechanisms of Plasma Polymerization	545
26.2	Plasma Polymerization Kinetics: Initiation of Polymerization by Dissociation of Hydrocarbons in Plasma Volume, Heterogeneous Polymerization of C <sub>1</sub> /C <sub>2</sub> Hydrocarbons	546
26.3	Plasma Initiated Chain-polymerization, Mechanism and Kinetics of Plasma Polymerization of Methyl Methacrylate	547
26.4	Plasma-initiated Graft Polymerization	548
26.5	Formation of Polymer Macroparticles in Volume of Nonthermal Plasma of Hydrocarbons	548
26.6	General Properties of Plasma-polymerized Thin Films	549
26.7	Plasma Treatment of Polymer Surfaces: Initial Surface Products, Treatment of Polyethylene	550
26.8	Nonthermal Plasma Etch of Polymers, Contribution of Charged Species, Atoms, Radicals, and UV-radiation in Polymer Treatment and Etching	551
26.9	Plasma-chemical Oxidation, Nitrogenation, and Fluorination of Polymer Surfaces	552
26.10	Aging Effect in Plasma-treatment of Polymers	554
26.11	Plasma Modification of Wettability of Polymer Surfaces	554
26.12	Plasma Enhancement of Polymer Surface Adhesion, Metallization of Polymer Surfaces	555
26.13	Plasma Treatment of Textiles: Processing of Wool	556
26.14	Plasma Treatment of Textiles: Processing of Cotton, and Synthetic Textiles, the Lotus Effect	557
26.15	Plasma-chemical Treatment of Plastics, Rubber Materials, and Special Polymer Films	558
26.16	Plasma Modification of Gas-separation Polymer Membranes: Enhancement and Control of Selectivity and Permeability	559
26.17	Mechanisms of Plasma Modification of Gas-separating Polymer Membranes, Lame Equation	561
26.18	Modeling of Selectivity of the Plasma-treated Gas-separating Polymer Membranes	563
26.19	Problems and Concept Questions	564
26.19.1	<i>Mechanisms and Kinetics of Plasma Polymerization</i>	564
26.19.2	<i>Temperature Dependence of the Plasma Polymerization Rate</i>	564
26.19.3	<i>Temperature Dependence of Electric Conductivity of Plasma-polymerized Films</i>	564
26.19.4	<i>Depth of Plasma Modification of Polymer Surfaces</i>	564
26.19.5	<i>Primary Plasma Components Active in High-depth Polymer Treatment</i>	564
26.19.6	<i>Plasma-chemical Nitrogenation and Fluorination of Polymer Surfaces</i>	565
26.19.7	<i>The Lotus Effect</i>	565
26.19.8	<i>Permeability of Plasma-treated Gas-separating Polymer Membranes</i>	565
26.19.9	<i>Threshold Effect of Plasma Treatment on Selectivity of Gas-separating Polymer Membranes</i>	565
<b>Lecture 27</b>	<b>Plasma Biology, Nonthermal Plasma Interaction with Cells</b>	<b>567</b>
27.1	Plasma Biology as a Fundamental Basis of Plasma Medicine, Plasma Agriculture, and Plasma Food Processing	567
27.2	Types of Cells and Primary Cell Components Involved in Interaction with Plasma	568
27.2.1	<i>The Cell Envelope: Membranes and Walls</i>	568
27.2.2	<i>The Nucleus, DNA, and Chromosomes</i>	569

27.2.3	<i>Cytoplasm and Cytosol</i>	569
27.2.4	<i>Vacuoles and Vesicles</i>	569
27.2.5	<i>Endoplasmic Reticulum</i>	569
27.2.6	<i>Ribosomes, Golgi Apparatus</i>	570
27.2.7	<i>Lysosomes</i>	570
27.2.8	<i>Mitochondria</i>	570
27.2.9	<i>Plastids</i>	571
27.3	Transport Processes Across Cell Membranes and Their Relevance to Plasma Treatment of Cells and Its Selectivity	571
27.4	Cell Cycle, Cell Division, Cellular Metabolism as a Possible Base of Treatment Selectivity in Plasma Biology	573
27.5	Reactive Species in Cells and Their Similarity with Plasma-generated Reactive Species, Reactive Oxygen Species (ROS)	574
27.6	Cellular Sources of Reactive Nitrogen Species (RNS), Some NO-based Plasma-biological and Cell Processes	575
27.7	Cell Signaling Functions and Their Role in Plasma Biology, Contribution of Reactive Species in Cell Signaling	576
27.8	Mechanisms of Plasma Interaction with Cells: Direct vs Indirect Plasma Effects, Main Stages, and Key Players	578
27.9	Contribution of Plasma-generated Charged Species to Plasma Interaction with Cells	580
27.10	Contribution of UV, Electric Field, Hydrogen Peroxide, Acidity, Ozone, NO <sub>x</sub> , Other ROS, and RNS to Direct Plasma Cell Treatment, Effect of Presence of Water and Media	581
27.11	Biological Mechanisms of Direct DBD Plasma Interaction with Mammalian Cells: Key Role of Intracellular ROS, Plasma-induced DNA Damage	582
27.12	Effect of the Cell Medium on Plasma Interaction with Mammalian Cells, Plasma-induced Factors Crossing the Cell Membrane	583
27.13	Problems and Concept Questions	585
27.13.1	<i>Osmosis, Flow of Water Across the Cell Membrane</i>	585
27.13.2	<i>Aquaporins (AQPs) and Selective Anticancer Behavior of Plasma</i>	585
27.13.3	<i>Cellular Metabolism and Selective Anticancer Behavior of Plasma</i>	585
27.13.4	<i>Intracellular ROS Transformations</i>	585
27.13.5	<i>Intracellular RNS Transformations</i>	585
27.13.6	<i>Liquid Medium Film Covering Cells</i>	585
27.13.7	<i>Propagation of the Electric Charge Effect Across Liquid Medium Film Covering Cells, the Bjerrum Length</i>	585
27.13.8	<i>Plasma-induced Electroporation</i>	585
<b>Lecture 28</b>	<b>Plasma Disinfection and Sterilization of Different Surfaces, Air, and Water Streams</b>	<b>587</b>
28.1	Nonthermal Plasma Surface Sterilization, Microorganism Survival Curves, D-value of the Microorganism Deactivation	587
28.2	Cold Atmospheric Pressure Plasma Inactivation of Microorganisms on the Surfaces, Mechanisms and Kinetics of Plasma Sterilization	588
28.3	Contribution of Different Plasma Species and Factors in Cold Atmospheric Pressure Plasma Sterilization of Surfaces	589
28.4	Nonthermal Plasma Sterilization of Spores and Viruses: Inactivation of <i>Bacillus cereus</i> , <i>Bacillus anthracis</i> Spores, SARS-CoV-2 Coronavirus	590
28.5	Decontamination of Surfaces from Extremophile Organisms and Prion Proteins Using Nonthermal Atmospheric-Pressure Plasma	592
28.6	Sub-lethal Plasma Effect on Bacterial Cells, Apoptosis vs Necrosis in Plasma Treatment of Cells	593
28.7	Different Levels of Deactivation/Destruction of Microorganisms Due to Plasma Sterilization: Are They Dead or Just Scared to Death? Concept of VBNC	594

- 28.8 Nonthermal Plasma Sterilization of Air Streams, Direct Air Sterilization vs Application of Filters, Pathogen Detection and Remediation System (PDRF) 595
- 28.9 Phenomenological Kinetics of Nonthermal Plasma Sterilization of Air Streams 597
- 28.10 Plasma-provided Water Disinfection and Sterilization Using Ozone, UV, and Pulsed Electric Fields 599
- 28.11 Application of Different Types of Direct Pulsed-plasmas for Water Disinfection and Sterilization 600
- 28.12 Challenge of Electric Energy Cost of Plasma-induced Water Disinfection and Sterilization, Most Energy-effective Technologies Based on Application of Sparks and Other “Quasi-thermal” Warm Discharges 601
- 28.13 Dominating Role of UV-radiation in the Highly Energy-effective Inactivation of Microorganisms in Water Using the Pulsed Spark Discharge System 602
- 28.14 Problems and Concept Questions 604
  - 28.14.1 Multi-slope Survival Curves for Plasma-induced Killing of Microorganisms 604
  - 28.14.2 Effect of Membrane Damages by Ion Bombardment During Plasma Sterilization of Surfaces 604
  - 28.14.3 Plasma-Induced Sterilization of Anthrax Spores Inside a Closed Paper Envelope Using DBD Plasma 604
  - 28.14.4 Plasma-Induced Killing of Microorganisms vs Transferring them to the VBNC (viable-but-not-culturable) State 604
  - 28.14.5 Nonthermal Plasma Sterilization of Air Streams, Plasma Suppression of the Airborne Microorganisms 605
  - 28.14.6 Phenomenological Kinetics of Nonthermal Plasma Sterilization of Air Streams 605
  - 28.14.7 Application of Different Types of Direct Pulsed-Plasmas for Water Disinfection and Sterilization 605
  - 28.14.8 Dominating Role of UV-radiation in the Highly Energy-Effective Inactivation of Microorganisms in Water Using the Spark Discharge System 605

**Lecture 29 Plasma Agriculture and Food Processing, Chemical and Physical Properties of Plasma-activated Water, Fundamentals and Applications to Wash and Disinfect Produce 607**

- 29.1 Plasma Agriculture and Food Processing: A Rapidly Emerging Field of Plasma Science and Technology, Direct Application of Plasma vs Use of Plasma-activated Water and Solutions 607
- 29.2 Where Plasma Technologies Can be Specifically Applied in the Life Cycle of Fresh Produce? 608
- 29.3 Direct Plasma-stimulated Seed Germination and Growth: Application of Low, Medium, and Atmospheric Pressure Discharges 609
- 29.4 Some Biological Effects of Direct Plasma-induced Enhancement of Seed Germination and Growth of Seedlings 610
- 29.5 Indirect Plasma Effects on Seeds, Effect of Plasma-treated Water on Seed Germination and Enhancement of Seedling Growth 611
- 29.6 Plasma Stimulation of Plant Growth Using Plasma-activated Water: Major Mechanisms, Comparison of Different Plasma Sources, Plasma Hydroponics 612
- 29.7 Direct Application of Plasma for Disinfection of Agricultural Products 614
- 29.8 Direct Plasma-induced Disinfection of Crops and Seeds 615
- 29.9 Plasma-induced Disinfection of Meats, Cheeses, Other Foods, and Relevant Food Containers and Storage Areas 616
- 29.10 Direct Plasma-induced Disinfection of Foods Inside of Closed Packages 617
- 29.11 Plasma-water, and How Does It Work in Agriculture for Disinfection and Washing of Fresh Produce and Other Foods? Plasma Chemistry in Water, Plasma-water Spraying and Misting 618
- 29.12 Metastable Nature of Chemical and Biological Activity of Plasma-activated Water, Metastable Plasma Acids 620
- 29.13 Plasma Misting Fundamentals: Mist Droplet Size Distribution, Mist Particulates Explosion and Evaporation-condensation Effects 623
- 29.14 Application of Plasma Misting to Fresh Produce Disinfection and Other Sanitization Technologies 624
- 29.15 Large-volume Produce Washing with Plasma-activated Water, Effect of Treatment Temperature 627

29.16 Produce Washing with Plasma-activated Water, Effect of Organic Load, Nonoxidative Disinfection Processes 629

29.17 Plasma Treatment of Water Leads Not Only to Disinfection but additionally, to Enhancement of Washability of Fresh Produce 631

29.18 Plasma Treatment Effect on Surface Tension, Viscosity, and Other Physical Properties of Water 632

29.19 About Mechanisms of Plasma-induced Changes of Physical Properties of Water 635

29.20 Problems and Concept Questions 636

29.20.1 Plasma Stimulation of Plant Growth Using Plasma-activated Water 636

29.20.2 Direct Plasma-induced Disinfection of Foods Inside of Closed Packages 636

29.20.3 Plasma Chemistry of Agricultural Water, Oxidative Disinfection 636

29.20.4 Metastable Nature of Chemical and Biological Activity of Plasma-Activated Water 636

29.20.5 Plasma Misting for Fresh Produce Disinfection 636

29.20.6 Mist Droplet Size Distribution, Mist Particulates Explosion and Evaporation-condensation Effects 636

29.20.7 Effect of Treatment Temperature on Produce Washing with Plasma-activated Water 636

29.20.8 Effect of Organic Load on Produce Washing, Plasma-induced Nonoxidative Disinfection 637

29.20.9 Plasma-induced Enhancement of Washability of Fresh Produce vs Stimulation of Direct Disinfection with PAW 637

29.20.10 Plasma Treatment Effect on Surface Tension of Water, It's Surfactancy, and Washability 637

**Lecture 30 Plasma Medicine: Safety, Selectivity, and Efficacy; Penetration Depth of Plasma-Medical Effects; Standardization and Dosimetry 639**

30.1 Safety, Selectivity, and Efficacy are Key Factors in Direct Plasma Treatment of Wounds and Diseases: Prehistory, History, and Nowadays of Plasma Medicine 639

30.2 Major Discharges in Plasma Medicine: Floating-electrode Dielectric Barrier Discharge (FE-DBD), Plasma Jets, Pin-to-hole (PHD) Discharge, and Electrical Safety Issues 642

30.3 FE-DBD Plasma Uniformity and Plasma Controllability for Safe Treatment of Living Tissue 643

30.4 Indirect Plasma Application for Medical Purposes: Plasma Pharmacology, Use of Plasma Activated Aqueous Media 645

30.5 Plasma Pharmacology: Use of Plasma Activated Biological Media (PAM), Plasma Activated Lactate Solution (PAL), and Gels for Medical Purposes 646

30.6 FE-DBD Plasma in Direct Living Tissue Sterilization 648

30.7 Analysis of Toxicity (Nondamaging) in Direct FE-DBD Plasma Treatment of Living Tissues 649

30.8 Direct Plasma Interaction with Living Tissue: Not only Plasma Affects Tissue, but Tissue Affects Plasma as Well; In-vitro Model Mimicking the Living Tissue 651

30.9 Depth of Penetration of Plasma-generated Active Species into Living Tissue 652

30.10 Plasma Effects Propagating into Living Tissue Deeper than Plasma Generated ROS/RNS, Effects of Radiation and Electric Field, Contribution of Cell-to-cell Signaling 654

30.11 Transferring Nanosecond Pulsed DBD Plasma Effects Across Barrier of Cells 655

30.12 Mechanisms of Plasma-induced Cell-to-cell Communication Leading to Deep Propagation of Plasma-medical Effects, Calcium Ion Wave Propagation 656

30.13 Standardization of Plasma-medical Devices and Approaches 658

30.14 Dosimetry of Plasma Medical Treatments and Procedures, Absorbed Energy Related Physical Approach to Dosimetry 659

30.15 Dosimetry of Plasma Medical Treatments and Procedures Based on Biological Responses of Tissues 661

30.16 Problems and Concept Questions 662

30.16.1 Electrical Safety of the FE-DBD Plasma Source for Direct Medical Treatment of Humans and Animals 662

30.16.2 Safety of the FE-DBD Plasma in Treatment of Nonuniform Living Tissues 662

30.16.3 Medical Applications of the Plasma-Activated Ringer's Lactate Solution (PAL) 662

30.16.4 Mechanisms of Plasma-Induced Cell-To-Cell Communication Leading to Deep Propagation of Plasma-Medical Effects 662

30.16.5	<i>Direct Relation Between the Medical Treatment Dose and the Treatment Energy in FE-DBD Plasma</i>	662
30.16.6	<i>Effective, and Safe Integrated Absorbed Energy Doses of the Plasma Medical DBD Treatment</i>	662
30.16.7	<i>Relation Between Integrated Absorbed Energy Doses in DBD with Absorbed Radiation Doses</i>	663
30.16.8	<i>Integrated Absorbed Energy Doses in DBD Leading to Necrosis of Treated Tissue</i>	663
30.16.9	<i>Plasma Treatment Units (PTU), Dosimetry Approach Based on Biological Readout</i>	663
<b>Lecture 31 Plasma Medicine: Healing of Wounds and Ulcerations, Blood Coagulation</b> 665		
31.1	Plasma Wound Healing, Types of Wounds, and Relevant Healing Processes	665
31.2	Specifics of Acute and Chronic Wounds Important for Their Plasma Healing	666
31.3	Effects of Plasma-generated NO on Wound Healing and Other Medical Treatments	668
31.4	Intensive-NO-generating Plasma Sources for Wound Treatment	669
31.5	Nitric Oxide Effects in Plasma-medical Plazon Treatment: Cell Cultures, Wound Tissues, Animal Models	670
31.6	Clinical Tests of Plasma-induced NO-therapy of Wounds: Plasma-medical Plazon Healing of Ulcers	671
31.7	Other Plazon Clinical Tests of Plasma-induced NO-therapy of Wounds	673
31.8	Wound Healing Using Pin-to-hole (PHD) and Microwave Transitional “Warm” Plasma Discharges	675
31.9	Treatment of Skin and Infected Wounds Using FE-DBD Plasma	676
31.10	Plasma Wound Healing in Clinical Studies	678
31.11	“Scientifically Based” Plasma-medical Devices Healing Wounds and Ulcerations in Medical Market	679
31.12	Preventing and Suppressing Bleeding Using Thermal Plasma Cauterization Devices, Argon Plasma Coagulators (APS)	679
31.13	Nonthermal Atmospheric-pressure Plasma-assisted Blood Coagulation	680
31.14	Biochemical Mechanisms of Nonthermal Plasma-induced Blood Coagulation, Contribution of Ca <sup>2+</sup> Ionic Factor to Blood Coagulation Cascade	682
31.15	Plasma-induced Blood Coagulation: Plasma Influence of Protein Activity, Natural-soft, Intermediate, and Strong Regimes of Stopping Bleeding	684
31.16	Problems and Concept Questions	685
31.16.1	<i>Intensive-NO-generating Plasma Sources for Wound Treatment</i>	685
31.16.2	<i>Direct FE-DBD Treatment of Heavy Bleeding and Infected Wounds</i>	686
31.16.3	<i>Thermal Plasma Cauterization Devices, Argon Plasma Coagulators (APC)</i>	686
31.16.4	<i>Biochemical Mechanisms of Nonthermal Plasma-induced Blood Coagulation</i>	686
31.16.5	<i>Natural-soft, Intermediate, and Strong Regimes of Stopping Bleeding</i>	686
<b>Lecture 32 Plasma Medicine: Dermatology and Cosmetics, Dentistry, Inflammatory Dysfunctions, Gastroenterology, Cardiovascular, and Other Diseases, Bioengineering and Regenerative Medicine, Cancer Treatment and Immunotherapy</b> 687		
32.1	Plasma Dermatology, Clinical Trials	687
32.2	Plasma Cosmetics Closely Related to Dermatological Studies	688
32.3	Plasma Dentistry: Structure of Teeth, Challenges for Plasma Application	690
32.4	First Effective Plasma Applications to Dental Health	691
32.5	Modification of Implant Surface, Enhancing Adhesive Qualities, Polymerization, Surface Coating, and Other Material-related Plasma Applications in Dentistry	693
32.6	Direct Application of Nonthermal Plasma in Dentistry	694
32.7	Plasma Treatment of Inflammatory Dysfunctions and Infections	695
32.8	Plasma Gastroenterology: Inflammatory Bowel Diseases (IBD)	697
32.8.1	<i>Pin-to-hole Microdischarge Plasma Treatment of Ulcerative Colitis</i>	697
32.9	Plasma in Cardiovascular Diseases: Plasma Effect on Whole Blood Viscosity (WBV)	700
32.10	Plasma in Cardiovascular Diseases: Control of Blood Rheological Properties and Low-density-lipoprotein (LDL) Cholesterol, Stimulation of Angiogenesis	702

32.11 Plasma-assisted Tissue Engineering: Regulation of Bio-properties of Polymers, Bioactive Micro-xerography, Cell Attachment and Proliferation on Polymer Scaffolds 703

32.12 Plasma Control of Stem Cells and Tissue Regeneration, Differentiation of Mesenchymal Stem Cells (MSC) into Bone and Cartilage Cells, Plasma Orthopedics 705

32.13 Plasma Treatment of Cancer, Direct and Indirect (Plasma-treated Solutions) Approaches 706

32.14 Plasma Abatement of Malignant Cells, Apoptosis vs Necrosis of Cancer Cells 707

32.15 Nonthermal Plasma Treatment of Explanted Tumors in Animal Models 709

32.16 Plasma Control and Suppression of Precancerous Conditions in Dermatology, Clinical FE-DBD Treatment of Actinic Keratosis 709

32.17 On a Way to Larger Clinical Studies in Plasma Oncology, Combination Therapies, Clinical Plasma Treatment of Cancer 711

32.18 Plasma in Onco-immunotherapy, Plasma-induced Systemic Tumor-specific Immunity, Immunogenic Cell Death, and Overcoming Immune Suppression 712

32.19 FE-DBD Plasma Immunotherapeutic Treatment of Colorectal Tumors in Animal Model, Vaccination in Plasma Cancer Treatment 713

32.20 Problems and Concept Questions 714

32.20.1 Nonthermal Plasma Dermatology 714

32.20.2 Direct Nonthermal Plasma Applications in Dentistry 714

32.20.3 Pin-to-hole Microdischarge Plasma Treatment of Ulcerative Colitis 714

32.20.4 Plasma Effect on Whole Blood Viscosity (WBV) 715

32.20.5 Nonthermal Plasma Control of Low-density-lipoprotein (LDL) Cholesterol in Blood 715

32.20.6 Plasma Control of Stem Cells and Tissue Regeneration, a Pathway from Plasma Orthopedics to Plasma Cosmetics 715

32.20.7 Selectivity of Nonthermal Plasma Treatment of Cancers 715

32.20.8 Plasma in Onco-immunotherapy, Plasma-induced Systemic Tumor-specific Immunity 715
