Preface	V
----------------------	----------

Part I. Identification with Incomplete Observations, Data Mining

Bounding Entries in Multi-way Contingency Tables Given a Set of Marginal Totals	3
<i>Adrian Dobra, Stephen E. Fienberg</i>	
1 Introduction	3
2 Technical Background	4
3 Bounds when Marginals Characterize Decomposable and Reducible Graphical Models	5
4 A General Bounds Algorithm	9
5 Conclusions	14
References	15

Identification and Estimation with Incomplete Data	17
<i>Joel L. Horowitz, Charles F. Manski</i>	
1 Introduction	17
2 Regression with Missing Outcome or Covariate Data	19
3 Identification Bounds on General Statistical Functionals	24
4 An Empirical Example	27
5 Conclusions	28
References	29

Computational Information Retrieval	31
<i>Jacob Kogan</i>	
1 Introduction	31
2 Profiles	32
3 Experiments	35
4 Applications	37
5 Conclusion	39
References	41

Studying Treatment Response to Inform Treatment Choice ...	43
<i>Charles F. Manski</i>	
1 Introduction	43
2 Treatment Choice in Heterogeneous Populations	45
3 Identification Problems and Treatment Choice under Ambiguity ...	48
4 Conclusion	54
References	54

Part II. Bayesian Methods and Modelling

Some Interactive Decision Problems Emerging in Statistical Games	59
<i>Bruno Bassan, Marco Scarsini and Shmuel Zamir</i>	
1 Introduction	59
2 Two Interacting Statisticians and Information Refusal	59
References	68
 Probabilistic Modelling: An Historical and Philosophical Digression	69
<i>Antonio Forcina</i>	
1 Away from Formal Statistical Inference	69
2 Where Do Models Come From?	72
References	75
 A Bayesian View on Sampling the 2×2 Table	77
<i>Seymour Geisser</i>	
1 Introduction	77
2 Sampling Issues	80
3 The Mixed Sampling Case	82
4 What Equal Likelihoods Entail	82
5 Remarks	85
References	86
 Bayesian Designs for Binomial Experiments	89
<i>Athanassios Katsis, Blaza Toman</i>	
1 Introduction	89
2 Formulation of the Problem	90
3 Results	94
References	96
 On the Second Order Minimax Improvement of the Sample Mean in the Estimation of a Mean Value of the Exponential Dispersion Family	99
<i>Zinoviy Landsman</i>	
1 Introduction	99
2 Second Order Generalized Bayes Estimator of the Mean	100
3 Second Order Minimaxity on the Infinite Interval of Values of μ	101
4 Tweedie Models	104
References	105

Bayesian Analysis of Cell Migration – Linking Experimental Data and Theoretical Models	107
<i>Roland Preuss, Albrecht Schwab, Hans J. Schnittler and Peter Dieterich</i>	
1 Introduction	107
2 The Problem	108
3 The Model	109
4 Bayesian Formalism	111
5 Results	113
6 Conclusion	114
References	114

Part III. Testing, Goodness of Fit and Randomness

Sequential Bayes Detection of Trend Changes	117
<i>Martin Beibel, Hans R. Lerche</i>	
1 Introduction	117
2 Assumptions and Results	118
3 Rewriting the Bayes Risk	119
4 The Integrated Posterior Variance	120
5 Mixture Stopping Rules	123
6 Asymptotic Optimality	126
References	130
Box–Cox Transformation for Semiparametric Comparison of Two Samples	131
<i>Konstantinos Fokianos</i>	
1 Introduction	131
2 The Density Ratio Model	133
3 Inference	135
4 Extensions	138
References	138
Minimax Nonparametric Goodness-of-Fit Testing	141
<i>Yuri I. Ingster, Irina A. Suslina</i>	
1 Minimax Setting in Goodness-of-Fit Testing	141
2 Comparing with the Minimax Estimation Problem	142
3 Types of Asymptotics in Goodness-of-Fit Testing	144
4 Test Procedures	149
5 Adaptive Setting	150
References	151

Testing Randomness on the Basis of the Number of Different Patterns	153
<i>Andrew L. Rukhin</i>	
1 Introduction and Summary.....	153
2 Correlation Polynomials and Generating Functions	154
3 Asymptotic Formulas for the Expected Number of Patterns Appearing a Given Number of Times and for Their Covariances	157
4 Asymptotic Normality and the Optimal Linear Test	161
References	164

The π^* Index as a New Alternative for Assessing Goodness of Fit of Logistic Regression	167
<i>Emese Verdes, Tamás Rudas</i>	
1 The π^* Index of Fit	167
2 Logistic Regression	168
3 The Data	169
4 The π^* Index of Fit for Logistic Regression.....	170
5 Results	176
References	176

Part IV. Statistics of Stationary Processes

Consistent Estimation of Early and Frequent Change Points ..	181
<i>Michael I. Baron, Nira Granott</i>	
1 Introduction and Examples.....	181
2 Sequential Estimation of Multiple Change Points: A Distribution Consistent Scheme	184
3 Applications and Practical Results	191
References	191

Asymptotic Behaviour of Estimators of the Parameters of Nearly Unstable INAR(1) Models	195
<i>Márton Ispány, Gyula Pap and Martien C.A. van Zuijlen</i>	
1 Introduction.....	195
2 Preliminaries	198
3 Joint Estimator	200
References	205

Guessing the Output of a Stationary Binary Time Series	207
<i>Gusztáv Morvai</i>	
1 Introduction.....	207
2 Forward Estimation for Stationary Binary Time Series	208
3 The Growth Rate of the Stopping Times	212
4 Guessing the Output at Stopping Time Instances	213
References	215

Asymptotic Expansions for Long-Memory	
Stationary Gaussian Processes	217
<i>David M. Zucker, Judith Rousseau, Anne Philippe and Offer</i>	
<i>Lieberman</i>	
1 Introduction	217
2 Background	219
3 Basic Frequentist Results	220
4 A Result on Products of Toeplitz Matrices	221
5 Application of Durbin's Theorem	222
6 Bartlett-Corrected Likelihood Ratio Tests	224
7 Bayesian Asymptotics for Parametric Models	224
References	225
Contributors	229
