Preface	v
1 Introduction	1
1.1 DAE Optimal Control Problems	8
1.1.1 Perturbation Index	24
1.1.2 Consistent Initial Values	30
1.1.3 Index Reduction and Stabilization	32
1.2 Transformation Techniques	36
1.2.1 Transformation to Fixed Time Interval	36
1.2.2 Transformation to Autonomous Problem	37
1.2.3 Transformation of Tschebyscheff Problems	38
1.2.4 Transformation of L_1 -Minimization Problems	38
1.2.5 Transformation of Interior-Point Constraints	39
1.3 Overview	42
1.4 Exercises	44
2 Infinite Optimization Problems	50
2.1 Function Spaces	50
2.1.1 Topological Spaces, Banach Spaces, and Hilbert Spaces	51
2.1.2 Mappings and Dual Spaces	54
2.1.3 Derivatives, Mean-Value Theorem, and Implicit Function Theorem	56
2.1.4 L_p -Spaces, $W_{q,p}$ -Spaces, Absolutely Continuous Functions, Functions of Bounded Variation	60
2.2 The DAE Optimal Control Problem as an Infinite Optimization Problem	68
2.3 Necessary Conditions for Infinite Optimization Problems	75
2.3.1 Existence of a Solution	77
2.3.2 Conic Approximation of Sets	79
2.3.3 Separation Theorems	84
2.3.4 First Order Necessary Optimality Conditions of Fritz John Type	87
2.3.5 Constraint Qualifications and Karush–Kuhn–Tucker Conditions	95
2.4 Exercises	100

3	Local Minimum Principles	104
3.1	Problems without Pure State and Mixed Control-State Constraints . . .	106
3.1.1	Representation of Multipliers	111
3.1.2	Local Minimum Principle	114
3.1.3	Constraint Qualifications and Regularity	118
3.2	Problems with Pure State Constraints	125
3.2.1	Representation of Multipliers	127
3.2.2	Local Minimum Principle	130
3.2.3	Finding Controls on Active State Constraint Arcs	135
3.2.4	Jump Conditions for the Adjoint	137
3.3	Problems with Mixed Control-State Constraints	141
3.3.1	Representation of Multipliers	143
3.3.2	Local Minimum Principle	145
3.4	Summary of Local Minimum Principles for Index-One Problems . . .	148
3.5	Exercises	152
4	Discretization Methods for ODEs and DAEs	157
4.1	Discretization by One-Step Methods	159
4.1.1	The Euler Method	159
4.1.2	Runge–Kutta Methods	162
4.1.3	General One-Step Method	168
4.1.4	Consistency, Stability, and Convergence of One-Step Methods	168
4.2	Backward Differentiation Formulas (BDF)	176
4.3	Linearized Implicit Runge–Kutta Methods	178
4.4	Automatic Step-size Selection	185
4.5	Computation of Consistent Initial Values	191
4.5.1	Projection Method for Consistent Initial Values	192
4.5.2	Consistent Initial Values via Relaxation	193
4.6	Shooting Techniques for Boundary Value Problems	195
4.6.1	Single Shooting Method using Projections	196
4.6.2	Single Shooting Method using Relaxations	203
4.6.3	Multiple Shooting Method	204
4.7	Exercises	208
5	Discretization of Optimal Control Problems	215
5.1	Direct Discretization Methods	216
5.1.1	Full Discretization Approach	218
5.1.2	Reduced Discretization Approach	220
5.1.3	Control Discretization	222
5.2	A Brief Introduction to Sequential Quadratic Programming	227
5.2.1	Lagrange–Newton Method	227
5.2.2	Sequential Quadratic Programming (SQP)	229

5.3	Calculation of Derivatives for Reduced Discretization	238
5.3.1	Sensitivity Equation Approach	239
5.3.2	Adjoint Equation Approach: The Discrete Case	241
5.3.3	Adjoint Equation Approach : The Continuous Case	248
5.4	Discrete Minimum Principle and Approximation of Adjoint	254
5.4.1	Example	262
5.5	An Overview on Convergence Results	273
5.5.1	Convergence of the Euler Discretization	273
5.5.2	Higher Order of Convergence for Runge–Kutta Discretizations	276
5.6	Numerical Examples	278
5.7	Exercises	288
6	Real-Time Control	292
6.1	Parametric Sensitivity Analysis and Open-Loop Real-Time Control	293
6.1.1	Parametric Sensitivity Analysis of Nonlinear Optimization Problems	293
6.1.2	Open-Loop Real-Time Control via Sensitivity Analysis	303
6.2	Feedback Controller Design by Optimal Control Techniques	315
6.3	Model Predictive Control	325
6.4	Exercises	332
7	Mixed-Integer Optimal Control	338
7.1	Global Minimum Principle	339
7.1.1	Singular Controls	351
7.2	Variable Time Transformation Method	359
7.3	Switching Costs, Dynamic Programming, Bellman's Optimality Principle	373
7.3.1	Dynamic Optimization Model with Switching Costs	374
7.3.2	A Dynamic Programming Approach	376
7.3.3	Examples	383
7.4	Exercises	391
8	Function Space Methods	394
8.1	Gradient Method	395
8.2	Lagrange–Newton Method	411
8.2.1	Computation of the Search Direction	417
8.3	Exercises	429
	Bibliography	433
	Index	455
