1	Nanotechnology: Principles and Applications	1
	S. Logothetidis	
1.1	Introduction	2
1.2	Methods and Principles of Nanotechnology	3
1.2.1	What Makes Nanostructures Unique	3
1.2.2	Size Dependence	5
1.2.3	Metal NPs	6
1.2.4	Quantum Dots	6
1.2.5	Nanotechnology Imitates Nature	7
1.3	From Microelectronics to Nanoelectronics and Molecular Electronics	10
1.4	Nano in Energy and Clean Energy	12
1.5	Nanotechnology Tools: Nanometrology	15
1.6	Future Perspectives	18
1.7	Summary	19
	References	20
2	Carbon Nanomaterials: Synthesis, Properties and Applications	23
	Kyriakos Porfyrakis and Jamie H. Warner	
2.1	Introduction	23
2.2	Fullerenes and Their Derivatives	24
2.2.1	Synthesis of Endohedral Fullerenes	25
2.2.2	Endohedral Metallofullerenes	26
2.2.3	Endohedral Nitrogen Fullerenes	27
2.2.4	Molecular Synthesis of Endohedral Fullerenes	28
2.2.5	Purification of Endohedral Fullerenes	29
2.2.6	Properties and Applications	29
2.2.7	Chemistry of Endohedral Fullerenes	32
2.2.8	One-Dimensional, Two-Dimensional Arrays and Beyond	35

vii

2.3	Graphene.....	36
2.3.1	Synthesis	36
2.3.2	Properties and Applications	38
2.4	Carbon Nanotubes.....	39
2.4.1	Synthesis	40
2.4.2	Applications.....	42
2.5	Summary.....	42
	References.....	43
3	Carbon Nanotubes: From Symmetry to Applications	47
	M. Damnjanović	
3.1	Introduction: Symmetry of Nanotubes	47
3.1.1	Configuration of Single-Wall Nanotubes	48
3.1.2	Symmetry of Single-Wall Nanotubes	48
3.1.3	Double-Wall Nanotubes	50
3.2	Energy Bands	51
3.2.1	Electronic Bands.....	51
3.2.2	Phonons	53
3.3	Interaction Between Walls	54
3.3.1	Potential Produced by Nanotube.....	54
3.3.2	Interaction.....	56
3.4	Summary.....	57
	References.....	57
4	Laser-Based Growth of Nanostructured Thin Films	59
	P. Patsalas	
4.1	Introduction.....	59
4.2	Instrumentation and Principles of Pulsed Laser Deposition.....	60
4.3	Examples and Applications	67
4.3.1	External Control of Ablated Species and Application to Ta-C Films [29]	67
4.3.2	Self-Assembled Nanoparticles into Dielectric-Matrix Films and Superlattices [52, 54]	71
4.3.3	Control of the Atomic Structure and Nanostructure of Intermetallic and Glassy Films [147].....	76
	References.....	78
5	High Efficiency Multijunction Solar Cells with Finely- Tuned Quantum Wells	85
	Argyrios C. Varonides	
5.1	What is a Solar Cell?	86
5.2	Photo-Currents	87
5.3	Solution of the Diffusion Equation: n-Region	88
5.4	Solution of the Diffusion Equation: P-Region	89
5.5	Total Electron and Hole Currents	90

5.6	P-I-N Geometries of Solar Cells.....	91
5.7	A Proposed Device	92
5.8	The Concept	94
5.9	Current Research Objectives: A Proposed Guideline.....	95
5.10	To Probe Further	101
	References.....	102
6	Thin Film Deposition and Nanoscale Characterisation	
	Techniques.....	105
	Spyridon Kassavetis, Christoforos Gravalidis, and Stergios Logothetidis	
6.1	Introduction.....	105
6.2	Methods and Results	106
6.2.1	Thin Film Deposition Techniques	106
6.2.2	Physical Vapor Deposition: Magnetron Sputtering	106
6.2.3	Nanoscale Characterization of Sputtered Thin Films	108
6.2.4	Wet Deposition Techniques of Thin Films	125
6.3	Summary: Conclusion	127
	References.....	127
7	Implementation of Optical Characterization for Flexible Organic Electronics Applications	131
	A. Laskarakis and S. Logothetidis	
7.1	Introduction.....	132
7.2	Optical Characterization of Materials	133
7.3	Flexible Organic Electronic Devices	137
7.4	Results and Discussion	139
7.4.1	Flexible Polymeric Substrates	139
7.4.2	Barrier Layers for Encapsulation of Devices	144
7.4.3	Transparent Electrodes (Inorganic, Organic).....	147
7.5	Conclusions and Perspectives.....	152
	References.....	153
8	Introduction to Organic Vapor Phase Deposition (OVPD®) Technology for Organic (Opto-)electronics.....	155
	Dietmar Keiper, Nico Meyer, and Michael Heuken	
8.1	Introduction.....	155
8.2	OVPD® Basics and Industrial Concept	157
8.3	OVPD® Deposition of Organic Thin Films and Devices	158
8.3.1	Single Film Deposition	158
8.3.2	Organic Film Morphology	161
8.3.3	OLED Stack Designs Fabricated by OVPD® – Cross-Fading.....	163
8.4	Conclusion.....	168
	References.....	169
