

Table of Contents

Preface	V
---------------	---

Conference Participants	XI
-------------------------------	----

Invited Papers

Large Deviations in Rare Events Simulation: Examples, Counterexamples and Alternatives <i>Søren Asmussen</i>	1
--	---

Some Applications of Quasi-Monte Carlo Methods in Statistics <i>Kai-Tai Fang</i>	10
---	----

Some New Perspectives on the Method of Control Variates <i>Peter W. Glynn and Roberto Szechtman</i>	27
--	----

Optimal Summation and Integration by Deterministic, Randomized, and Quantum Algorithms <i>Stefan Heinrich and Erich Novak</i>	50
---	----

Quasirandom Walk Methods <i>Christian Lécot and Shigeyoshi Ogawa</i>	63
---	----

Recent Advances in the Theory of Nonlinear Pseudorandom Number Generators <i>Harald Niederreiter and Igor E. Shparlinski</i>	86
--	----

QMC Integration – Beating Intractability by Weighting the Coordinate Directions <i>Ian H. Sloan</i>	103
---	-----

Quasi-Monte Carlo – Discrepancy between Theory and Practice <i>Shu Tezuka</i>	124
--	-----

Efficient Monte Carlo Simulation Methods in Statistical Physics <i>Jian-Sheng Wang</i>	141
---	-----

An Historical Overview of Lattice Point Sets <i>Yuan Wang and Fred J. Hickernell</i>	158
---	-----

Contributed Papers

Multicanonical Monte Carlo Simulations <i>Bernd A. Berg</i>	168
--	-----

Pricing American Derivatives using Simulation: A Biased Low Approach <i>Phelim P. Boyle, Adam W. Kolkiewicz, and Ken Seng Tan</i>	181
Fast Evaluation of the Asian Basket Option by Singular Value Decomposition <i>Lars O. Dahl and Fred E. Benth</i>	201
Relationships Between Uniformity, Aberration and Correlation in Regular Fractions 3^{s-1} <i>Kai-Tai Fang and Chang-Xing Ma</i>	215
Uniformity in Fractional Factorials <i>Kai-Tai Fang, Chang-Xing Ma, and Rahul Mukerjee</i>	232
Another Random Scrambling of Digital (t, s) -Sequences <i>Henri Faure and Shu Tezuka</i>	242
Fast Generation of Randomized Low-Discrepancy Point Sets <i>Ilja Friedel and Alexander Keller</i>	257
Obtaining $O(N^{-2+\epsilon})$ Convergence for Lattice Quadrature Rules <i>Fred J. Hickernell</i>	274
Efficient Bidirectional Path Tracing by Randomized Quasi-Monte Carlo Integration <i>Thomas Kollig and Alexander Keller</i>	290
Residual Versus Error in Transport Problems <i>Rong Kong and Jerome Spanier</i>	306
Construction of Equidistributed Generators Based on Linear Recurrences Modulo 2 <i>Pierre L'Ecuyer and François Panneton</i>	318
Quasi-Regression and the Relative Importance of the ANOVA Components of a Function <i>Christiane Lemieux and Art B. Owen</i>	331
Variants of Transformed Density Rejection and Correlation Induction <i>Josef Leydold, Erich Janka, and Wolfgang Hörmann</i>	345
Using Discrepancy to Evaluate Fractional Factorial Designs <i>Min-Qian Liu</i>	357
A Parallel Quasi-Monte Carlo Method for Computing Extremal Eigenvalues <i>Michael Mascagni and Aneta Karaivanova</i>	369
A Nonempirical Test on the Weight of Pseudorandom Number Generators <i>Makoto Matsumoto and Takuji Nishimura</i>	381

A Kronecker Product Construction for Digital Nets <i>Harald Niederreiter and Gottlieb Pirsic</i>	396
Parallel Quasi-Monte Carlo Methods on a Heterogeneous Cluster <i>Giray Ökten and Ashok Srinivasan</i>	406
American Option Pricing: A Classification–Monte Carlo (CMC) Approach <i>Jorge A. Picazo</i>	422
A Software Implementation of Niederreiter-Xing Sequences <i>Gottlieb Pirsic</i>	434
Average Case Complexity of Weighted Integration and Approximation over $\mathbb{R}^d$ with Isotropic Weight <i>Leszek Plaskota, Klaus Ritter, and Grzegorz W. Wasilkowski</i>	446
Using MCMC for Logistic Regression Model Selection Involving Large Number of Candidate Models <i>Guoqi Qian and Chris Field</i>	460
Quasi-Monte Carlo Methods in Designs of Spatial Sampling Points <i>Yingcai Su</i>	475
Improving the Efficiency of the Two-stage Shrinkage Estimators Using Bootstrap Methods <i>Vasant B. Waikar, Makarand V. Ratnaparkhi, and Frederick J. Schuurmann</i>	487
Tractability of Approximation and Integration for Weighted Tensor Product Problems over Unbounded Domains <i>G.W. Wasilkowski and H. Woźniakowski</i>	497
D -optimal Designs Based on Elementary Intervals for b -adic Haar Wavelet Regression Models <i>Min-Yu Xie</i>	523
On the Monte-Carlo Simulation of Several Regression Estimators in Nonlinear Time Series <i>Jun Zheng and Zhongjie Xie</i>	536
