| 15.2      | The Current Status of the World's Oil Reserves . . . . .                                                                                                        | 255 |
| 15.3      | Quantity and Distribution of Oil Remaining in the Reservoir . . . . .                                                                                           | 257 |
| 15.3.1    | Introduction . . . . .                                                                                                                                          | 257 |
| 15.3.2    | Methods for Evaluating the Overall Quantity<br>of Remaining Oil . . . . .                                                                                       | 258 |
| 15.3.2.1  | The Material Balance Method . . . . .                                                                                                                           | 258 |
| 15.3.2.2  | Single Well Tracer Test . . . . .                                                                                                                               | 258 |
| 15.3.3    | Determination of the Distribution of Remaining Oil<br>Throughout the Reservoir . . . . .                                                                        | 261 |
| 15.3.3.1  | Retrieval and Analysis of Downhole Cores . . . . .                                                                                                              | 262 |
| 15.3.3.2  | Resistivity Logs . . . . .                                                                                                                                      | 262 |
| 15.3.3.3  | Pulsed Neutron Logs (PNL) . . . . .                                                                                                                             | 263 |
| 15.3.3.4  | Nuclear Magnetism Log (NML) . . . . .                                                                                                                           | 265 |
| 15.4      | ARM – Advanced Reservoir Management: Improvement<br>of the Oil Recovery Factor by Optimisation<br>of Water or Gas Injection . . . . .                           | 269 |
| 15.4.1    | ARM for Water Injection . . . . .                                                                                                                               | 269 |
| 15.4.1.1  | The Effect of Well-Spacing on Oil Recovery by Water Injection . . . . .                                                                                         | 269 |
| 15.4.1.2  | Why Infill Drilling Can Lead to an Increase in Oil Recovery . . . . .                                                                                           | 272 |
| 15.4.1.3  | Optimising Infill Well Location by ARM Techniques . . . . .                                                                                                     | 273 |
| 15.4.2    | Crestal Injection of Non-Miscible Gas . . . . .                                                                                                                 | 276 |
| 15.4.2.1  | Unidirectional Displacement of Oil by Gas<br>in the Presence of $S_{iw}$ . . . . .                                                                              | 276 |
| 15.4.2.2  | Vertical Displacement of Oil by Gas in a<br>Gravity-Stabilised Regime . . . . .                                                                                 | 277 |
| 15.4.2.3  | Production of Oil Through Vertical Displacement<br>by Gas Under Gravity-Dominated Conditions . . . . .                                                          | 278 |
| 15.5      | Enhanced Oil Recovery (EOR):<br>Definition and Classification of Methods . . . . .                                                                              | 280 |
| 15.5.1    | Introduction . . . . .                                                                                                                                          | 280 |
| 15.5.2    | Types of Enhanced Oil Recovery Methods . . . . .                                                                                                                | 282 |
| 15.6      | Steam Drive . . . . .                                                                                                                                           | 284 |
| 15.6.1    | The Influence of Temperature on Reservoir Rock<br>and Fluid Properties . . . . .                                                                                | 284 |
| 15.6.2    | Steam Drive Technology . . . . .                                                                                                                                | 287 |
| 15.6.3    | Problems Encountered in the Reservoir . . . . .                                                                                                                 | 291 |
| 15.6.4    | Summary . . . . .                                                                                                                                               | 293 |
| 15.7      | Huff'n'puff, or Steam Soak . . . . .                                                                                                                            | 294 |
| 15.7.1    | Origins of the Method . . . . .                                                                                                                                 | 294 |
| 15.7.2    | Steam Soak Technology . . . . .                                                                                                                                 | 294 |
| 15.7.3    | Reservoir Engineering Considerations . . . . .                                                                                                                  | 296 |
| 15.8      | In Situ Combustion . . . . .                                                                                                                                    | 297 |
| 15.8.1    | Principles of the Method . . . . .                                                                                                                              | 297 |

|           |                                                                                                |     |
|-----------|------------------------------------------------------------------------------------------------|-----|
| 15.8.2    | What Happens in the Reservoir. . . . .                                                         | 299 |
| 15.8.3    | Wet Combustion . . . . .                                                                       | 301 |
| 15.8.4    | Injection of Oxygen or Oxygen-Enriched Air. . . . .                                            | 302 |
| 15.8.5    | Summary . . . . .                                                                              | 302 |
| 15.9      | Miscible Gas Flooding . . . . .                                                                | 303 |
| 15.9.1    | Introduction . . . . .                                                                         | 303 |
| 15.9.2    | Pseudo-Ternary Diagrams for the Reservoir Oil/Injection<br>Gas Mixture . . . . .               | 303 |
| 15.9.3    | Phase Behaviour of a Mixture of Reservoir Oil/Gaseous<br>Hydrocarbon and/or Nitrogen . . . . . | 304 |
| 15.9.3.1  | Use of Pseudo-Ternary Diagrams to Describe Phase Behaviour. .                                  | 304 |
| 15.9.3.2  | First Contact Miscibility . . . . .                                                            | 305 |
| 15.9.3.3  | Multiple Contact Miscibility: Condensing Gas Drive . . . . .                                   | 305 |
| 15.9.3.4  | Multiple Contact Miscibility: Vaporising Gas Drive . . . . .                                   | 306 |
| 15.9.4    | Phase Behaviour of a Mixture of Reservoir Oil and Carbon Dioxide                               | 308 |
| 15.9.4.1  | Thermodynamic Properties of Carbon Dioxide. . . . .                                            | 308 |
| 15.9.4.2  | Type I Behaviour of a Mixture of Reservoir Oil<br>and Carbon Dioxide . . . . .                 | 309 |
| 15.9.4.3  | Type II Behaviour of a Mixture of Reservoir Oil<br>and Carbon Dioxide . . . . .                | 311 |
| 15.9.5    | Correlations for the Estimation<br>of Minimum Miscibility Pressure (MMP) . . . . .             | 313 |
| 15.9.5.1  | Vaporising Gas Drive . . . . .                                                                 | 313 |
| 15.9.5.2  | Condensing and Vaporising Gas Drives . . . . .                                                 | 314 |
| 15.9.5.3  | Miscibility of Oil and Nitrogen . . . . .                                                      | 314 |
| 15.9.5.4  | Miscible Displacement with Carbon Dioxide . . . . .                                            | 315 |
| 15.9.6    | Flow Regimes Encountered in Miscible Gas Drive . . . . .                                       | 316 |
| 15.9.7    | Displacement Under Gravity-Stabilised Conditions . . . . .                                     | 318 |
| 15.9.8    | Miscible Gas Drive Technology . . . . .                                                        | 319 |
| 15.9.9    | Immiscible Flooding and Huff'n puff Using Carbon Dioxide . . .                                 | 321 |
| 15.9.10   | Summary . . . . .                                                                              | 323 |
| 15.10     | Polymer Flooding. . . . .                                                                      | 324 |
| 15.10.1   | Introduction . . . . .                                                                         | 324 |
| 15.10.2   | Polymers Used. . . . .                                                                         | 324 |
| 15.10.3   | Rheology of Polymer Solutions. . . . .                                                         | 326 |
| 15.10.3.1 | Overview of Rheology . . . . .                                                                 | 326 |
| 15.10.3.2 | Polymer Solutions . . . . .                                                                    | 328 |
| 15.10.4   | Improvement of the Permeability Profile with Polymer Gels . . .                                | 329 |
| 15.10.5   | Polymer Technology . . . . .                                                                   | 330 |
| 15.10.6   | Summary . . . . .                                                                              | 332 |
| 15.11     | Micellar/Polymer Flooding . . . . .                                                            | 333 |
| 15.11.1   | Introduction . . . . .                                                                         | 333 |
