

Contents

<u>I</u>	<u>Introduction</u>	9
<u>II</u>	<u>The Role of Calorimetry</u>	
II.1	Natural Sciences and Thermodynamics	10
II.2	Implications of Thermodynamics	10
II.3	Calorimetry and Experimental Thermodynamics	11
II.4	History of Calorimetry	19
<u>III</u>	<u>Classical Calorimetry</u>	
III.1	Foundations of Classical Calorimetry	21
III.2	Classical Instruments	23
III.3	Limitations of Classical Calorimetry	37
<u>IV</u>	<u>New Theory of Calorimetry</u>	
IV.1	Foundations of Theory	38
IV.2	Theory of Linear Thermal Systems	42
IV.3	Active Thermal Systems	53
IV.4	Analog- Computer- Model of Thermal Systems	64
<u>V</u>	<u>Application of New Theory</u>	
V.1	Analysis of Classical Instruments	66
V.2	Principle of Modern Isothermal Calorimeter	72
<u>VI</u>	<u>Experimental Investigations</u>	
VI.1	Description of Instrument	83
VI.2	Test of Instrument	90
VI.3	Thermochemical Results	98

<u>VII</u>	<u>Conclusions</u>	100
	<u>Appendix</u>	101
	<u>References</u>	114
