Differential Forms and Boundary Integral Equations for Maxwell-Type Problems	1
<i>Stefan Kurz, Bernhard Auchmann</i>	
1 Introduction	1
2 Differential Forms – Preliminaries	3
2.1 Basic Definitions	3
2.2 Integral Transformations	11
2.3 Fundamental Solution of the Helmholtz Equation	14
2.4 Single-Layer and Double-Layer Potentials	16
3 Sobolev Spaces of Differential Forms	18
3.1 Sobolev Spaces on the Domain	18
3.2 Sobolev Spaces on the Boundary	21
4 Representation Formula	26
4.1 Maxwell-Type Problems, Solution Spaces, and Trace Operators	27
4.2 Asymptotic Conditions	28
4.3 Representation Formula for Maxwell Solutions	31
4.4 Jump Relations of the Layer Potentials	42
5 Boundary Integral Operators	45
5.1 Symmetry Properties	47
5.2 Ellipticity Properties	50
6 Boundary Integral Equations	53
6.1 Calderón Projector for Interior and Exterior Problems ..	53
6.2 Equivalent Maxwell-Type Problems, Dual Transformations	55
7 Conclusions	60
References	61

Discrete Electromagnetism with Shape Forms of Higher Polynomial Degree	63
<i>Marvin Fleck, Sergej Rjasanow</i>	
1 Introduction	63
2 The Magnetoquasistatic Approximation of Maxwell's Equations	66
2.1 Classical Derivation	66
2.2 Differential Forms	70
3 The Low Order Version	77
3.1 Dual Complex	77
3.2 Derivative and Trace Operators	78
3.3 Hodge Operators	79
3.4 Pairing Matrices	80
3.5 Discrete Equation	80
4 Localization of Degrees of Freedom	81
4.1 Small Simplices	81
4.2 Higher-Dimensional Simplices	84
5 Higher Order DEM	84
6 Nonlinear Materials	88
7 Numerical Results	89
8 Conclusions	91
References	91
Additive Schwarz Methods for the hp Version of the Boundary Element Method in $\mathbb{R}^3$	93
<i>Florian Leydecker, Ernst P. Stephan</i>	
1 Introduction	93
2 Additive Schwarz Method – General Setting	96
3 Additive Schwarz Method for the hp -Version BEM for the Hypersingular Integral Equation on Rectangular Meshes	96
4 Additive Schwarz Method for the p -Version BEM for the Hypersingular Integral Equation on Triangles	100
5 Additive Schwarz Method for the hp -Version BEM for the Weakly Integral Equation	106
References	108
Fast Boundary Element Methods for Industrial Applications in Magnetostatics	111
<i>Zoran Andjelic, Günther Of, Olaf Steinbach, Peter Urthaler</i>	
1 Introduction	111
2 Boundary Integral Formulations for Transmission Problems	112
2.1 Model Problem	113
2.2 Steklov–Poincaré Operator Interface Equation	114
2.3 Single Layer Potential Formulation	117
2.4 Double Layer Potential Formulation	118

2.5	Equivalence and Unique Solvability of the Boundary Integral Equations	121
2.6	Evaluation of the Magnetic Field	121
3	Boundary Element Methods	124
3.1	Steklov–Poincaré Operator Interface Equation	125
3.2	Single Layer Potential Formulation	127
3.3	Direct Double Layer Potential Formulation	128
3.4	Indirect Double Layer Potential Formulation	130
4	Numerical Examples	131
4.1	Sphere	131
4.2	Cube	132
4.3	Ring	133
4.4	Ring with Gap	138
4.5	Controllable Reactor	139
5	Conclusions	141
	References	141

Wave Propagation Problems Treated with Convolution Quadrature and BEM

Lehel Banjai, Martin Schanz
