1	Intr	oduction		1
	1.1		taics – What's It All About?	1
	1.2		y of this Book	10
	1.3		Glossary of Key PV Terms	11
			elevant Terminology Relating to Meteorology, Astronomy and Geometry V Terminology	11 13
	1.4		ended Guide Values for Estimating PV System Potential	14
	1. 1		Solar Cell Efficiency η_{PV}	14
			Solar Module Efficiency η _M	14
			Energy Efficiency (Utilization Ratio, System Efficiency) η _E	15
			Annual Energy Yield per Installed Kilowatt of Peak Installed Solar	
			Generator Capacity	15
			PV Installation Space Requirements	17
			Cost per Installed Kilowatt of Peak Power	17
			Feed-in Tariffs; Subsidies	18
			Worldwide Solar Cell Production	20
		1.4.9 I	Installed Peak Capacity	21
			The Outlook for Solar Cell Production	22
	1.5	Examples	S	24
	1.6	Bibliogra	phy	25
2	Key	Propertie	es of Solar Radiation	27
	2.1			27
			olar Declination	27
			he Apparent Path of the Sun	28
	22	Extraterre	estrial Radiation	31

	2.3	Radiation on the Horizontal Plane of the Earth's Surface	32
		2.3.1 Irradiated Energy H on the Horizontal Plane of the Earth's Surface	34
	2.4	Simple Method for Calculating Solar Radiation on Inclined Surfaces	39
		2.4.1 Annual Global Irradiation Factors	44
		2.4.2 Elementary Radiation Calculation Examples for Inclined Surfaces	47
	2.5	Radiation Calculation on Inclined Planes with Three-Component Model	49
		2.5.1 Components of Global Radiation on the Horizontal Plane	49
		2.5.2 Radiation Reflected off the Ground	50
		2.5.3 The Three Components of Radiation on Inclined Surfaces	51
		2.5.4 Approximate Allowance for Shading by the Horizon	54
		2.5.5 Effect of Horizon and Façade/Roof Edge Elevation on Diffuse Radiation	
		(Sky and Reflected Radiation)	58
		2.5.6 Total Energy Incident on Inclined Surfaces (Generic Case)	62
		2.5.7 Retrospective Calculation of Irradiance Incident on Inclined Solar	
		Generators, Using Global Radiation Readings on the Horizontal Plane	63
		2.5.8 Examples of Radiation Calculations with the Three-Component Method	64
	2.6	Approximate Annual Energy Yield for Grid-Connected PV Systems	68
		2.6.1 Examples for Approximate Energy Yield Calculations	69
	2.7	Composition of Solar Radiation	69
	2.8	Solar Radiation Measurement	71
		2.8.1 Pyranometers	71
		2.8.2 Reference Cells	71
		2.8.3 Pyranometer Versus Reference Cell Measurements	73
	2.9	Bibliography	76
3	Sola	ar Cells: Their Design Engineering and Operating Principles	79
	3.1	The Internal Photoelectric Effect in Semiconductors	79
	3.2	A Brief Account of Semiconductor Theory	81
		3.2.1 Semiconductor Doping	81
		3.2.2 The P–N Junction	83
		3.2.3 Characteristic Curves of Semiconductor Diodes	85
	3.3	The Solar Cell: A Specialized Semiconductor Diode with a Large Barrier Layer	
		that is Exposed to Light	86
		3.3.1 Structure of a Crystalline Silicon Solar Cell	86
		3.3.2 Equivalent Circuit of a Solar Cell	87
		3.3.3 Characteristic Curves of Solar Cells	89
	3.4	Solar Cell Efficiency	94
		3.4.1 Spectral Efficiency η_S (of Solar Cells with a Single Junction)	94
		3.4.2 Theoretical Efficiency η_T (of Solar Cells with a Single Junction)	97
		3.4.3 Practical Efficiency η_{PV} (at a Junction)	100
		3.4.4 Efficiency Optimization Methods	104
	3.5	The Most Important Types of Solar Cells and the Attendant Manufacturing	
		Methods	108
		3.5.1 Crystalline Silicon Solar Cells	108
		3.5.2 Gallium Arsenide Solar Cells	111
		3.5.3 Thin-Film Solar Cells	114
		3.5.4 Dye Sensitized Solar Cell (DSSC; Photoelectrochemical Solar Cells,	
		Grätzel Solar Cells)	121
	3.6	Bifacial Solar Cells	122
	3.7	Examples	122
	20	Ribliography	124

4	Sola	r Modules and Solar Generators	127
	4.1	Solar Modules	127
	4.2	Potential Solar Cell Wiring Problems	138
		4.2.1 Characteristic Curves of Solar Cells in all Quadrants	138
		4.2.2 Wiring Solar Cells in Series	140
		4.2.3 Parallel-Connected Solar Cells	147
	4.3	Interconnection of Solar Modules and Solar Generators	149
		4.3.1 Series Connection of Solar Modules to a String	149
		4.3.2 Parallel-Connected Solar Modules	152
		4.3.3 Solar Generators with Parallel-Connected Series Strings	152
		4.3.4 Solar Generators with Solar Module Matrixing	159
	4.4	Solar Generator Power Loss Resulting from Partial Shading and Mismatch Loss	160
		4.4.1 Power Loss Induced by Module Shading	160
		4.4.2 Mismatch Loss Attributable to Manufacturing Tolerances	163
		4.4.3 Mismatch Loss Attributable to String Inhomogeneity	166
	4.5	Solar Generator Structure	166
		4.5.1 Solar Generator Mounting Options	166
		4.5.2 Mounting Systems	176
		4.5.3 Electrical Integration of Solar Generators	184
		4.5.4 DC Wiring Power Loss	196
		4.5.5 Grounding Problems on the DC Side	198
		4.5.6 Structure of Larger-Scale Solar Generators	199
		4.5.7 Safety Protection Against Touch Voltage	201
		4.5.8 Factors that Reduce Solar Generator Power Yield	202
		Examples	217
	4.7	Bibliography	221
5	PV	Energy Systems	223
	5.1	Stand-alone PV Systems	223
		5.1.1 PV System Batteries	225
		5.1.2 Structure of Stand-alone PV Systems	242
		5.1.3 PV Installation Inverters	248
		5.1.4 Stand-alone Installation DC Appliances	258
		5.1.5 Stand-alone 230 V AC PV Installations	259
		5.1.6 Stand-alone PV Installations with Integrated AC Power Busses	259
	5.2	Grid-Connected Systems	262
		5.2.1 Grid-Connected Operation	262
		5.2.2 Design Engineering and Operating Principles of PV System Inverters	266
		5.2.3 Standards and Regulations for Grid-Connected Inverters	277
		5.2.4 Avoidance of Islanding and Stand-alone Operation in Grid Inverters	288
		5.2.5 Operating Performance and Characteristics of PV Grid Inverters	302
		5.2.6 Problems that Occur in Grid-Connected Systems and Possible	
		Countermeasures	347
		5.2.7 Regulation and Stability Problems in Grid Systems	368
	5.3	Bibliography	389
6	Pro	tecting PV Installations Against Lightning	395
	6.1		395
		6.1.1 Specimen Calculation for the Annual Number of Direct Lightning	
		Strikes N_D	397

6.2	Lighti	ning Strikes: Guide Values; Main Effects	398
	6.2.1	Types of Lightning	398
	6.2.2	Effects of Lightning	399
	6.2.3	Lightning Protection Installation Classes and Efficiency	399
	6.2.4	Use of Approximate Solutions for Lightning Protection Sizing	399
6.3	Basic	principles of Lightning Protection	400
	6.3.1	Internal and External Lightning Protection	400
	6.3.2	Protection Zone Determination Using the Lightning Sphere Method	400
	6.3.3	Protection Zone for Lightning Conductors and Lightning Rods	401
	6.3.4	Lightning Protection Measures for Electricity Installations	402
6.4	Shunt	ing Lightning Current to a Series of Down-conductors	402
6.5		tial Increases; Equipotential Bonding	404
	6.5.1	Equipotential Bonding Realization	405
	6.5.2	Lightning Current in Conductors that are Incorporated into the	
		Equipotential Bonding Installation	405
	6.5.3	Lightning Protection Devices	407
6.6	Lighti	ning-Current-Induced Voltages and Current	408
	6.6.1	Mutual Inductance and Induced Voltages in a Rectangular Loop	409
	6.6.2	Proximity Between Down-conductors and other Installations	413
	6.6.3	Induced Current	415
	6.6.4	Voltages in Lightning-Current-Conducting Cylinders	429
6.7	PV In	stallation Lightning Protection Experiments	432
	6.7.1	Introduction	432
	6.7.2	The Surge Current Generator	432
	6.7.3	Test Apparatus for Solar Module Characteristic Curves	433
	6.7.4	Solar Cell and Solar Module Damage Induced by Surge Current	435
	6.7.5	Improving Module Immunity to Lightning Current	439
	6.7.6	Mini-lightning Conductors for PV Installations	440
	6.7.7	Measurement of Induced Voltage in Individual Modules	440
	6.7.8	Voltage Induced in Wired Solar Generators	450
	6.7.9	Conclusions Drawn from the Test Results	458
6.8	Optimal Sizing of PV Installation Lightning Protection Devices		459
	6.8.1	Solar Module Mutual Inductance	460
	6.8.2	Wiring Mutual Inductance	461
	6.8.3	Specimen Calculation for M_S and v_{max} in a Whole String	462
	6.8.4	Effects of Distant Lightning Strikes	463
6.9	Recor	nmendations for PV Installation Lightning Protection	470
	6.9.1	Possible Protective Measures	470
	6.9.2	Protection Against Distant Lightning Strikes	471
	6.9.3	Protection Against Both Distant and Nearby Strikes (up to about 20 m)	475
	6.9.4	Protection Against Direct Lightning Strikes on PV Installations	
		and Buildings	476
	6.9.5	Lightning Protection for Large-Scale Ground-Based PV Installations	479
	6.9.6	Lightning Protection for PV Installations on Flat Roofs	480
	6.9.7	,	481
6.10	-	and Conclusions	484
6.11	Biblic	ography	485

Al	Insolation Calculation Tables	633
	A1.1 Basic Insolation Calculation	633
	A1.2 Insolution Calculation Using the Three-Component Model	633
A2		634
A3	** - ·	634
A4		648
A5	Shading Diagrams for Various Latitudes	673
A6	Energy Yield Calculation Tables	676
	A6.1 Energy Yield Calculation Tables for Grid-Connected Systems	677
	A6.2 Stand-alone Installation Sizing Tables	679
A7	k_T and k_G Figures for Energy Yield Calculations	681
	A7.1 k_T Figures for Various R eference Stations	682
	A7.2 k_G Figures for Various Reference Stations	682
Α8	Insolation and Energy Yield Calculation Maps	683
	A8.1 Specimen Polar Shading Diagram	683
	A8.2 Insolation Maps	683
	A8.3 Maps for Estimates of Annual PV Energy Yield in Europe and Environs	689
Apr	pendix B: Links; Books; Acronyms; etc.	691
	Links to PV Web Sites	691
	B1.1 Organizations	691
	B1.2 Government Organizations	692
	B1.3 Research Organizations	692
	B1.4 Specialized Journals	692
B2	Books on Photovoltaics and Related Areas	693
