Preface to the 2nd edition — V

Preface to the 1st edition — VII

1 The ballpark where it all occurs — 1

- 1.1 The tree of life — 2
- 1.2 Bacteria — 3
- 1.3 Archaea — 4
- 1.4 Eukaryotes — 4
 - 1.4.1 Nucleus — 4
 - 1.4.2 Endoplasmatic reticulum — 5
 - 1.4.3 Golgi apparatus — 5
 - 1.4.4 Mitochondria — 6
 - 1.4.5 Lysosome — 7
 - 1.4.6 Peroxisome — 7
 - 1.4.7 Chloroplast — 7
 - 1.4.8 Vacuol — 9
 - 1.4.9 Cytoplasm, cytosol and cytoskeleton — 9
- 1.5 Water — 10
- Further reading — 12

2 The rules — 14

- 2.1 The hydrophobic effect — 14
- 2.2 Covalent bonds — 15
- 2.3 Noncovalent bonds — 15
 - 2.3.1 Ion-ion interactions — 16
 - 2.3.2 Hydrogen bonds — 17
 - 2.3.3 Van der Waals interactions — 18
- 2.4 pH — 19
- 2.5 Numbers are important — 20
- Further reading — 20

3 The players — 22

- 3.1 Twenty different α -amino acids — 24
 - 3.1.1 Nonpolar amino acids — 25
 - 3.1.2 Polar-uncharged amino acids — 27
 - 3.1.3 Polar-charged amino acids — 28
 - 3.1.4 Aromatic amino acids — 30
 - 3.1.5 Substituents — 31
- Further reading — 33

4 The team — 34

- 4.1 The peptide bond — 34
- 4.2 The Ramachandran graph — 37
- 4.3 The primary structure — 38
- 4.4 The secondary structure — 39
 - 4.4.1 α -Helix — 40
 - 4.4.2 β -Strands and β -sheet — 44
 - 4.4.3 Turns and loops — 46
- 4.5 Secondary structure prediction — 49
- 4.6 The tertiary structure — 50
- 4.7 The quaternary structure — 51
 - Further reading — 52

5 The league — 54

- 5.1 More water — 55
- 5.2 Domains — 56
 - 5.2.1 How to acquire a domain — 60
 - 5.2.2 Classifying domains — 62
- 5.3 Motifs — 64
- 5.4 Topology and connectivity — 67
- 5.5 Why should proteins be grouped? — 71
 - Further reading — 72

6 El clásico — 74

- 6.1 Myoglobin — 74
- 6.2 Hemoglobin — 76
 - 6.2.1 The role of heme — 78
 - 6.2.2 The Bohr effect — 79
 - 6.2.3 2,3-Bisphosphoglycerate — 82
 - 6.2.4 Fetal hemoglobin — 83
 - 6.2.5 Sickle-cell diseases and sickle-cell anemia — 83
 - 6.2.6 Allostery and cooperative binding — 84
 - Further reading — 86

7 The ball is round — 87

- 7.1 Collagen — 87
- 7.2 Fibroin – a valuable protein — 90
- 7.3 Coiled-coil and helical bundles — 93
- 7.4 Intermediate filaments — 96
- 7.5 Microtubules — 99
- 7.6 Actin filaments — 103
 - Further reading — 108

8 The midfield — 110

- 8.1 Lipid bilayers — 110
- 8.2 Membrane proteins — 112
- 8.3 Glycophorin — 114
- 8.4 The fluid mosaic membrane model — 116
- 8.5 Integral membrane proteins — 118
- 8.6 The hydropathy index — 121
- 8.7 The signal peptide — 121
- Further reading — 124

9 The playmaker — 125

- 9.1 A little bit of thermodynamics — 125
- 9.2 The biological workhorse — 127
- 9.3 Reaction rate — 128
- 9.4 The steady-state assumption — 130
- 9.5 The Michaelis–Menten constant — 132
- 9.6 The active site — 135
- 9.7 Lysozyme — 136
- 9.8 Serine proteases — 139
- 9.9 Enzyme control — 143
- 9.9.1 Feedback inhibition — 147
- 9.9.2 Alloster control — 147
- 9.9.3 Covalent modification — 149
- 9.9.4 Proteolytic control — 151
- 9.9.5 Regulatory proteins — 153
- 9.9.6 Synthesis control — 154
- 9.10 Enzyme evolution — 156
- 9.11 Enzyme classes — 158
- Further reading — 159

10 The striker — 161

- 10.1 Levinthal's paradox — 161
- 10.2 *Why* do proteins fold? — 163
- 10.3 *How* do proteins fold? — 164
- 10.4 Co-translational folding — 166
- 10.5 Proteins with two distinct structures — 168
- 10.6 Intrinsic disordered proteins — 171
- 10.7 Moonlighting — 171
- Further reading — 173

11 Full-time — 174

- 11.1 Rotary motors — **174**
- 11.1.1 Bacterial flagellar motor — **178**
- 11.2 Muscle contraction — **179**
- 11.2.1 Myosin — **180**
- 11.2.2 The motor domain — **181**
- 11.2.3 The cross-bridge cycle — **182**
- 11.2.4 Role of calcium ions in skeletal muscle contraction — **183**
- 11.2.5 Myosin domain architecture — **184**
- 11.2.6 Myosin-dependent cargo transport — **186**
- 11.3 Transport along microtubules — **188**
- 11.3.1 Dynein — **188**
- 11.3.2 Kinesin — **192**
- 11.4 Nonmotile P-loop NTPase — **197**
- Further reading — **200**

12 Extra time — 202

- 12.1 Protein structure prediction — **203**
- 12.2 AlphaFold — **203**
- 12.3 Molecular dynamic simulation — **205**
- 12.4 X-ray crystallography — **206**
- 12.5 Nuclear magnetic resonance (NMR) spectroscopy — **208**
- 12.6 Cryogenic electron microscopy (cryo-EM) — **210**
- 12.7 Mass spectrometry — **212**
- 12.8 What does the protein structure look like? — **214**
- Further reading — **216**

13 Penalty shoot-out — 217

- 13.1 Buffers — **218**
- 13.2 Preparation of extract — **218**
- 13.3 Solubility and precipitation — **220**
- 13.4 Chromatography — **223**
- 13.4.1 Ion exchange chromatography (IEX) — **223**
- 13.4.2 Hydrophobic interaction chromatography (HIC) — **226**
- 13.4.3 Affinity chromatography (AC) — **226**
- 13.4.4 Reverse-phase chromatography (RFC) — **230**
- 13.4.5 Gel filtration (GF) — **230**
- 13.5 Protein purification in a nut shell — **232**
- 13.6 Where is the protein? — **233**
- 13.6.1 Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE) — **234**
- Further reading — **236**

14	Silly season — 238
14.1	Risk assessment — 238
14.2	Green fluorescent protein (GFP) — 239
14.2.1	Equipment — 240
14.2.2	Material — 240
14.2.3	Procedure — 241
14.2.4	Report — 241
14.3	Alcohol dehydrogenase — 241
14.1.1	Equipment — 244
14.1.2	Material — 244
14.1.3	Procedure — 244
14.1.4	Experimental design — 245
14.1.5	Report — 245
	Further reading — 245

Index — 247
