

Contents

1 Basic Concepts of Numerical Analysis of Stochastic Differential Equations Explained by Balanced Implicit Theta Methods	1
Henri Schurz	
2 Kernel Density Estimation and Local Time	141
Ciprian A. Tudor	
3 General Shot Noise Processes and Functional Convergence to Stable Processes	151
Wissem Jedidi, Jalal Almhana, Vartan Choulakian, and Robert McGorman	
4 The Lower Classes of the Sub-Fractional Brownian Motion	179
Charles El-Nouty	
5 On the Bounded Variation of the Flow of Stochastic Differential Equation	197
Mohamed Erraoui and Youssef Ouknine	
6 Stochastic Volatility and Multifractional Brownian Motion	211
Antoine Ayache and Qidi Peng	
7 Two-Sided Estimates for Distribution Densities in Models with Jumps	239
Archil Gulisashvili and Josep Vives	
8 Maximizing a Function of the Survival Time of a Wiener Process in an Interval	255
Mario Lefebvre	
Appendix A	
SAAP 2010 Scientific Committee	263
