Preface *xi*

Introduction *1*

1	Basic Principles	4
1.1	Atomic structure	4
1.2	Plasmas	8
1.3	Emission and absorption of radiation	9
1.4	Ionization	18
1.5	Dissociation	23
1.6	Sources for atomic spectrometry	27
1.7	Analytical atomic spectrometry	31
2	Spectrometric Instrumentation	34
2.1	Figures of merit of an analytical method	34
2.2	Optical spectrometers	51
2.2.1	Optical systems	52
2.2.2	Radiation detectors	61
2.2.3	Non-dispersive spectrometers	70
2.3	Mass spectrometers	72
2.3.1	Types of mass spectrometers	73
2.3.2	Ion detection	80
2.3.3	Ion extraction	82
2.3.4	Ion optics and transmission	84
2.4	Data acquisition and treatment	84
3	Sample Introduction Devices	88
3.1	Sample introduction by pneumatic nebulization	90
3.2	Ultrasonic nebulization	103
3.3	Hydride and other volatile species generation	105
3.4	Electrothermal vaporization	109
3.4.1	The volatilization process	109
3.4.2	Types of electrothermal devices	111

3.4.3	Temperature programming	114
3.4.4	Analytical performance	115
3.5	Direct solids sampling	117
3.5.1	Thermal methods	117
3.5.2	Slurry atomization	120
3.5.3	Arc and spark ablation	124
3.5.4	Laser ablation	131
3.6	Cathodic sputtering	135
4	Atomic Absorption Spectrometry	148
4.1	Principles	148
4.2	Atomic absorption spectrometers	150
4.2.1	Spectrometers	150
4.2.2	Primary radiation sources	152
4.3	Flame atomic absorption	158
4.3.1	Flames and burners	159
4.3.2	Nebulizers	161
4.3.3	Figures of merit	162
4.4	Electrothermal atomic absorption	164
4.4.1	Atomizers	165
4.4.2	Thermochemistry	168
4.4.3	Figures of merit	169
4.5	Special techniques	172
4.5.1	Hydride and cold-vapor techniques	172
4.5.2	Direct solids sampling	174
4.5.3	Indirect determinations	175
4.5.4	Flow injection analysis	175
4.5.5	Diode laser atomic absorption spectrometry	176
4.6	Background correction techniques	177
4.6.1	Correction for background absorption with the deuterium lamp technique	177
4.6.2	Background correction with the aid of the Zeeman effect	179
4.6.3	Smith–Hieftje technique	182
4.6.4	Coherent forward scattering	183
4.7	Fields of application	184
4.8	Outlook	191
5	Atomic Emission Spectrometry	192
5.1	Principles	192
5.2	Atomic emission spectrometers	202
5.3	Flame emission	210
5.4	Arcs and sparks	210
5.4.1	Arc emission spectrometry	210
5.4.1.1	Arc characteristics	210

5.4.1.2	Dc arc spectrometry	211
5.4.1.3	Ac arc spectrometry	213
5.4.2	Spark emission spectrometry	213
5.4.2.1	Sparks	213
5.4.2.2	Analytical features	215
5.5	Plasma source AES	216
5.5.1	Dc plasma-jet AES	217
5.5.1.1	Types of plasma jets	217
5.5.1.2	Three-electrode plasma jet	218
5.5.2	Inductively coupled plasma AES	219
5.5.2.1	The inductively coupled plasma	219
5.5.2.2	Instrumentation	221
5.5.2.3	Analytical performance	223
5.5.2.4	Applications	232
5.5.3	Low-power high-frequency plasmas	233
5.5.4	Microwave plasmas	234
5.6	Glow discharge AES	241
5.6.1	Hollow cathodes for AES	242
5.6.2	Furnace emission spectrometry	243
5.6.3	Dc glow discharges with a flat cathode	244
5.6.4	Rf glow discharges	248
5.6.5	New developments	249
5.7	Laser sources	251
6	Plasma Mass Spectrometry	254
6.1	ICP mass spectrometry	255
6.1.1	Instrumentation	255
6.1.2	Analytical features	257
6.1.3	Applications	268
6.1.4	Outlook	272
6.2	Glow discharge mass spectrometry	275
6.2.1	Instrumentation	277
6.2.2	Analytical performance	281
6.2.3	Analytical applications	282
7	Atomic Fluorescence Spectrometry	290
7.1	Principles	290
7.2	Instrumentation	293
7.3	Analytical performance	295
8	Laser Enhanced Ionization Spectrometry	297
8.1	Principles	297
8.2	Figures of merit	300
8.3	Analytical applications	301

9	Sample Preparation for Atomic Spectrometry	302
9.1	Sample preparation in direct compact sample analysis	302
9.2	Grinding, sieving and compaction of powders	302
9.3	Sample dissolution	304
9.3.1	Wet chemical methods	304
9.3.2	Fusion procedures	304
9.3.3	Microwave-assisted methods	305
9.3.4	Combustion techniques	305
9.4	Flow injection analysis	305
9.5	Leaching sample preparation methods	306
10	Comparison with Other Methods	307
10.1	Power of detection	307
10.2	Analytical accuracy	309
10.3	Economic aspects	310
	Literature	312
	Index	348
