

Contents

Keynote Speakers

A Turbulent Dispersion Model for Particles or Bubbles	3
<i>Donald A. Drew</i>	
Strong Coupling Methods	13
<i>Hermann G. Matthies, Jan Steindorf</i>	
Discontinuous Galerkin Method for Modeling Flow and Reactive Transport in Porous Media	37
<i>Mary F. Wheeler, Shuyu Sun, Owen Eslinger, Béatrice Rivière</i>	

Part I. Material Modelling and Multiscale Problems

Modelling and numerical simulation of martensitic transformation	59
<i>Marcel Arndt</i>	
Coupling of Homogenization Techniques with Multigrid Solvers for Unstructured Meshes	67
<i>Claus G. Bayreuther, Christian Miehe</i>	
Cutting-plane integration algorithm for ductile materials with damage	73
<i>Slav Dimitrov, Eckart Schnack</i>	
Upper and lower semicontinuity of a stable set for rate-independent processes	79
<i>Messoud A. Efendiev</i>	
Dissipation distances in multiplicative elastoplasticity	87
<i>Klaus Hackl, Alexander Mielke, Dirk Mittenhuber</i>	
Multiscale Modeling in the Mechanics of Materials: Cohesion, Interfacial Interactions, Inclusions and Defects	101
<i>Sergey Lurie, Petr Belov, Dmitriy B. Volkov-Bogorodsky</i>	
Computational Homogenization of Materials with Microstructures Based on Incremental Variational Formulations	111
<i>Christian Miehe, Matthias Lambrecht, Jan Schotte</i>	

Mechanical Properties and Damage Processes of Pyrolytic Carbon	123
<i>Romana Piat, Eckart Schnack</i>	
Optimal design of laminated composites	129
<i>Tomáš Roubíček</i>	

Part II. Numerical Methods

Conservation laws with discontinuous flux modeling clarifier-thickener units	137
<i>Raimund Bürger, Kenneth H. Karlsen</i>	
Artificial outlet boundary conditions for steady flows with rotational symmetry	143
<i>Cristian A. Coclici, Ivan L. Sofronov, Wolfgang L. Wendland</i>	
Modelling chemical vapour infiltration of pyrolytic carbon	149
<i>Tom-Alexander Langhoff, Eckart Schnack</i>	
Performance of Some Finite Elements in Numerical Simulation of Complex Incompressible Three Dimensional Flow	155
<i>Andrzej F. Nowakowski, Wanwilai Kraipech, Tom Dyakowski</i>	
A fast multipole boundary element method for a modified hypersingular boundary integral equation	163
<i>Günther Of, Olaf Steinbach</i>	
Analysis of a Discretization Method for the Richards' Equation	171
<i>Iuliu Sorin Pop</i>	
A scheme for construction of algorithms for numerical solution of boundary-value problems on compound domains based on the difference potentials method	179
<i>Victor S. Ryaben'kii</i>	
The Identification Procedure of the <i>Cosserat</i> Material Constants as an Inverse Problem	183
<i>Bernd Scholz, Wolfgang Ehlers</i>	
Taylor-Hood elements in 3D	189
<i>Christian Wieners</i>	

Part III. Solid Mechanics

Singularities of surface-breaking cracks in bi-material interfaces	199
<i>Atanas Dimitrov, Eckart Schnack</i>	
Multi-time Scale Simulation of Longitudinal Impact Responses	205
<i>Bin Hu, Werner Schiehlen, Peter Eberhard</i>	
On admissible coefficients of friction for the solvability of contact problems with friction	213
<i>Jiří Jarušek, Christof Eck</i>	
Regularity results for transmission problems for the Lamé operator on polyhedral domains	221
<i>Dorothee Knees</i>	
Quasistatic Propagation of Cracks	227
<i>Victor A. Kovtunencko</i>	
New generalizations of the Cahn-Hilliard equation based on a microforce balance	233
<i>Alain Miranville, Messoud Efendiev</i>	
Contact of Elastic Bodies with Negative Poisson's Ratio	239
<i>G. Szefer, D. Kedzior</i>	
Transient Dynamic Response of a Cracked Piezoelectric Solid Under Impact Loading	247
<i>Ch. Zhang</i>	

Part IV. Porous Media and Fluid – Structure Interaction

Mixed-type systems of convection-diffusion equations modeling polydisperse sedimentation	257
<i>Stefan Berres, Raimund Bürger, Elmer M. Tory</i>	
Simultaneous Solution to Viscous Fluid Flow Interacting with Large Amplitude Structural Vibrations	263
<i>Dieter Dinkler, Björn Hübner, Elmar Walhorn</i>	
A Continuum Approach for the Swelling of Charged Hydrated Media	271
<i>Wolfgang Ehlers, Ayhan Acartürk and Bernd Markert</i>	

Simulation of Acoustics-Structure-Interaction on Non-Conforming Discretizations	279
<i>Matthias Fischer, Lothar Gaul</i>	
Injection-ejection fluid influence on velocity and vorticity distributions in laminar-turbulent transition of unsteady incompressible boundary layer on porous surface	285
<i>Decan J. Ivanovic, Viktor N. Salnikov</i>	
Modeling of Heterogeneities for Twophase Flow in the Subsurface	295
<i>Hartmut Jakobs, Andreas Bielinski, Holger Class, Rainer Helmig</i>	
Low-Dimensional Models of Flow over a Body of Revolution at High Incidence	301
<i>Yuli Lifshitz, David Degani</i>	
Multiphysics coupling of three-phase and two-phase models of flow in porous media	311
<i>Małgorzata Peszyńska</i>	
On solving boundary value problem in fluid mechanics by Fourier's method: Wall Interference of Transonic Wind Tunnels	317
<i>Boško Rašuo</i>	
Boundary Element Formulations for Linear Poroelastodynamic Continua	323
<i>Martin Schanz, Dobromil Pryl</i>	
Aerodynamic, structural and electromagnetic interaction applied to conformal antennas	329
<i>Harmen Schippers, Guus Vos, Hans van Tongeren</i>	
Direct Simulation of Aeroacoustics	337
<i>Thomas Schwartzkopff, Claus-Dieter Munz</i>	
Simulation of Sedimentation of Monodisperse and Polydisperse Suspensions	343
<i>E.M. Tory, R.A. Ford, M. Bargiel</i>	
Iterative Substructuring Schemes for Fluid Structure Interaction	349
<i>Wolfgang A. Wall, Daniel P. Mok, Ekkehard Ramm</i>
