List of Tables	XVII
Notation	XIX
Kurzfassung	XXI
Abstract	XXI

1 Introduction	1
2 Current Status of CO₂ Mineralization	5
2.1 Basics of CO ₂ mineralization	6
2.2 Overview of CO ₂ mineralization technologies	8
2.3 Environmental assessment of CO ₂ mineralization	15
2.3.1 General introduction of life cycle assessment	15
2.3.2 Life cycle assessment of CO ₂ mineralization	17
2.4 Greenhouse gas emission mitigation approaches for the cement industry	19
2.5 Large-scale potential of CO ₂ mineralization for GHG mitigation	22
2.6 Economics of mineralization on a large scale	24
2.7 Contribution of this thesis	25
3 Carbon Footprint of CO₂ Capture, Utilization and Storage by Mineralization Pathways	29
3.1 LCA method	30
3.1.1 Goal & scope definition	30
3.1.2 Life cycle inventory (LCI)	34
3.1.3 Life cycle impact assessment (LCIA)	34
3.1.4 Interpretation	35
3.2 Background data and scenarios	35
3.3 Carbon footprint of CSTR 115 bar pathway using serpentine	37

3.4	Carbon footprint of CCUS by mineralization pathways for the state-of-the-art scenario	39
3.5	Carbon footprint of CCUS by mineralization pathways for the ideal-mineralization scenario	42
3.6	Sensitivity analysis for the state-of-the-art scenario	43
3.7	Conclusions	49
4	A Cement Industry Based on CO₂ Mineralization	51
4.1	Process concept and LCA method	52
4.1.1	Ordinary Portland cement production	52
4.1.2	CO ₂ mineralization	53
4.1.3	Combined CO ₂ mineralization and cement production	54
4.1.4	LCA method and background data	57
4.2	Carbon footprint of combined mineralization and cement production . .	59
4.3	Towards carbon-neutral cement	63
4.4	Discussion and Conclusions	66
5	A Climate-Optimal Supply Chain for CCUS by Mineralization	69
5.1	Technologies, scope, and data for the CO ₂ mineralization supply chain .	70
5.1.1	Solid feedstock sources	70
5.1.2	CO ₂ feedstock sources	73
5.1.3	Energy supply	75
5.1.4	CO ₂ capture, utilization, and storage by mineralization	75
5.1.5	Goal and scope of the study	76
5.2	Matching approach for climate-optimal CCUS supply chain	77
5.2.1	First optimization problem: sink-source matching	78
5.2.2	Second optimization problem: local pipeline network design . .	83
5.3	GHG mitigation potential of CCUS by mineralization supply chain . .	86
5.4	Supply chain of CCUS by mineralization	90
5.4.1	Energy supply	92
5.4.2	CO ₂ supply	92
5.4.3	Large-scale mineralization plant	94
5.4.4	Large-scale mineral deposits	94
5.5	Non-climate environmental impacts	97
5.6	Conclusions	98
6	Cost-Optimal Supply Chains for CCUS by Mineralization	101
6.1	Technologies, scope, and data for CO ₂ mineralization supply chain . .	102
6.1.1	Options for solid feedstock, CO ₂ , and energy supply	103

6.1.2	Life cycle inventories and expenditures	105
6.1.3	Goal and scope of the study	106
6.2	Supply-chain design approach	107
6.2.1	First optimization problem: sink-source matching	108
6.2.2	Second optimization problem: local pipeline network design	114
6.2.3	Scenarios for CCUS by mineralization supply chain	115
6.3	Cost-optimal supply chain for the base-case scenario	118
6.4	Scenario analysis for supply chains of CCUS by mineralization	123
6.5	Promising locations for CO ₂ mineralization	126
6.6	Conclusion	128
7	Summary, Conclusions, and Future Perspectives	131
7.1	Summary and conclusions	131
7.2	Future perspectives	133
 Appendices		
A	Carbon Footprint of CO₂ Capture, Utilization, and Storage by Mineralization	141
A.1	Functional unit for CCUS by mineralization	141
A.2	Life cycle stages for CCUS by mineralization	142
A.3	Sensitivity analysis on electricity grid mix	145
A.4	Sensitivity analysis on feedstock transport distance	147
A.5	Considered LCA data sets for CCUS by mineralization pathways	149
A.6	Carbon footprint of background processes for CCUS by mineralization	150
A.7	Laboratory data for the considered CCUS by mineralization pathways	151
A.8	Life cycle inventory data of CCUS by mineralization pathways for state-of-the-art scenario	152
A.9	Mass balance of the main components of CCUS by mineralization pathways for state-of-the-art scenario	159
B	A Cement Industry Based on CO₂ Mineralization	161
B.1	Environmental impacts of combined CO ₂ mineralization and cement production	161
B.2	Life cycle inventory data for the CO ₂ mineralization pathway	163
B.3	Considered LCA data sets for cement production	165
B.4	Considered life cycle inventory data for cement production	166

B.5	System boundaries of benchmark approaches for carbon footprint mitigation in cement industry	167
B.6	Model description	169
B.7	Carbon footprint of combined configurations	170
B.8	Effect of mineralization pathway on the carbon footprint of combined configurations	172
C	A Climate-Optimal Supply Chain for CCUS by Mineralization	175
C.1	Results of scenarios	175
C.1.1	Average European energy mix scenario	175
C.1.2	CO ₂ road transport scenario	177
C.1.3	Total CO ₂ sources scenario	178
C.1.4	Low-emission energy scenario	180
C.1.5	Carbon-negative scenario	182
C.1.6	Cement sector scenario	184
C.1.7	Pure CCS scenario	186
C.1.8	Current solid feedstock scenario	187
C.1.9	Low extraction-capacity scenario	189
C.2	Sensitivity analysis	191
C.2.1	Availability of solid feedstock	191
C.2.2	Minimum size of mineralization plant	192
C.2.3	Length of CO ₂ pipe	193
C.2.4	Distance of SiO ₂ transport	194
C.3	Life Cycle Inventory (LCI) data	195
C.3.1	LCI data for CO ₂ mineralization	195
C.3.2	LCI data for conventional cement production	197
C.3.3	LCI data for CO ₂ capture	198
C.3.4	LCI data for energy supply	199
C.3.5	LCI data for CO ₂ pipeline	199
C.4	CO ₂ sources	201
C.5	Solid feedstock	202
C.6	Modifications of the sink-source matching optimization problem for DAC204	
D	Cost-Optimal Supply Chains for CCUS by Mineralization	207
D.1	Results of cost-optimal CCUS by mineralization supply chain for the base-case scenario avoiding 120 Mt CO _{2e} /year	207
D.2	Environmental impacts	209

D.3	Cost-optimal supply chains for CCUS by mineralization avoiding 4 Mt CO _{2e} /year	210
D.4	Cost-optimal supply chains for CCUS by mineralization avoiding 20 Mt CO _{2e} /year	212
D.5	Cost-optimal supply chains for CCUS by mineralization avoiding 40 Mt CO _{2e} /year	214
D.6	Cost-optimal supply chains for CCUS by mineralization avoiding 60 Mt CO _{2e} /year	216
D.7	Cost-optimal supply chains for CCUS by mineralization avoiding 80 Mt CO _{2e} /year	218
D.8	Cost-optimal supply chains for CCUS by mineralization avoiding 100 Mt CO _{2e} /year	220
D.9	Cost-optimal supply chains for CCUS by mineralization avoiding 120 Mt CO _{2e} /year	222
D.10	Cost-optimal supply chains for CCUS by mineralization avoiding 150 Mt CO _{2e} /year	224
D.11	CapEx and OpEx data	226
D.12	First optimization problem: sink-source matching	232
D.13	Second optimization problem: local pipeline network design	240
