

Contents

1. Introduction. By P. BRADSHAW (With 6 Figures)	
1.1 Equations of Motion	1
1.2 Shear-Layer Instability and the Development of Turbulence	7
1.3 Statistical Averages	13
1.4 Two-Point Statistics and Spectral Representation	15
1.5 Local Isotropy	21
1.6 Inhomogeneous Turbulence	24
1.7 Turbulence Flows in Practice: Shear Layers	28
1.8 Turbulent Flow Near a Solid Surface	34
1.9 Conditions Near a Turbulent/Non-Turbulent Interface .	39
1.10 The Eddy Structure of Shear Layers	41
References	43
2. External Flows. By H.-H. FERNHOLZ (With 7 Figures)	
2.1 Introduction	45
2.2 Flow Configurations and Boundary Conditions	47
2.3 Two-Dimensional Boundary Layers at Small Mach Numbers	50
2.3.1 The Multi-Layer Model of Turbulent Boundary Layers	50
The Inner Layer	53
The Outer Layer	56
2.3.2 Self-Preserving Shear Layers	60
2.3.3 Upstream History, Relaxation Effects and Downstream Stability	63
2.3.4 The Effect of Free-Stream Turbulence	65
2.3.5 The Effect of Streamwise Pressure Gradient	66
2.3.6 Separation, Separation Bubbles and Reattachment Flow	68
Separation Bubbles	70
Reattachment of Turbulent Shear Flow	71

2.3.7	The Effect of Changing Wall Geometry	72
	Wall Roughness	72
	Wavy Walls	75
2.3.8	The Effect of Wall Curvature	76
2.3.9	The Effect of Heat Transfer at the Wall	77
2.3.10	Transition from Laminar to Turbulent Flow	79
2.3.11	Relaminarization and Reverse Transition	82
2.4	Three-Dimensional Boundary Layers	83
2.4.1	Classification of Three-Dimensional Flows	83
2.4.2	Three-Dimensional Thin Shear Layers	85
2.4.3	Separation in Three-Dimensional Flow	90
2.5	Two-Dimensional Boundary Layers at High Mach Numbers	90
	References	98

3. Internal Flows. By J. P. JOHNSTON (With 15 Figures)

3.1	Zones of Flow and Basic Phenomena	109
3.1.1	Longitudinal Curvature and System Rotation	113
3.1.2	Secondary Flows	118
3.1.3	Interactions in Duct Flows	126
3.1.4	Separation and Reattachment	130
3.2	Fully Developed Flow in Pipes and Ducts	133
3.3	Flow in Diverging Ducts	139
3.4	Fully Separated Flows	144
3.4.1	Sudden Expansion in a Pipe	148
3.4.2	Two-Dimensional Step Expansions	152
3.4.3	Confined Jet Mixing (Ejectors)	154
3.5	Turbomachinery	157
3.5.1	Profile Boundary Layers in Axial Flow	158
3.5.2	End-Wall Boundary Layers	161
3.5.3	Periodic Flow, Turbulence and Blade Wakes	163
	References	165

4. Geophysical Turbulence and Buoyant Flows

By P. BRADSHAW and J. D. WOODS

4.1	Geophysical Boundary Layers	173
4.1.1	The Atmospheric Boundary Layer	173
4.1.2	The Ocean Surface Layer	179
4.1.3	Pollutant Plume Dispersion in the Surface Layer	185
4.2	Laboratory-Scale Buoyant Flows	186
4.2.1	Buoyant Free Convection from Horizontal Surfaces	186
4.2.2	Density Interfaces	187

4.2.3 Convection from Inclined or Vertical Surfaces . . .	188
4.2.4 Turbulent Convection in Confined Spaces	189
References	191

5. Calculation of Turbulent Flows

By W. C. REYNOLDS and T. CEBECI (With 3 Figures)

5.1 Strategy and Recent Developments	193
5.1.1 Background	193
5.1.2 One-Equation Models	195
5.1.3 Two-Equation Models	197
5.1.4 Stress-Equation Models	201
5.1.5 Large-Eddy Simulations	204
5.2 Simpler Methods	206
5.2.1 Discussion	206
5.2.2 Integral Methods	208
Head's Method	208
Green's "Lag-Entrainment" Method	210
Myring's Method	212
5.2.3 Differential Methods	216
Zero-Equation Methods	216
One-Equation Methods	222
5.2.4 Short-Cut Methods	222
Incompressible Flow on a Smooth Flat Plate . . .	222
Prediction of Flow Separation in Two-Dimensional Incompressible Flows	224
Similarity Solutions for Free Shear Flows	225
References	228

6. Heat and Mass Transport. By B. E. LAUNDER (With 7 Figures)

6.1 Background	232
6.1.1 Areas of Importance	232
6.1.2 Models for Heat and Mass Transport	233
6.2 Scalar Fluxes in Flows Near Local Equilibrium	236
6.2.1 Some Proposals for Closing the Scalar Flux Equations	236
6.2.2 Near-Wall Turbulence and the Turbulent Prandtl Number	244
6.2.3 Streamwise and Lateral Heat Transport in Near-Wall Turbulence	247
6.2.4 Buoyant Influences on Local-Equilibrium Flows . .	250
6.3 Inhomogeneous Flows	259
6.3.1 Closure of the Scalar Flux Equations in Inhomogeneous Flows	259

6.3.2	The Transport and Dissipation of Scalar Fluctuations	262
6.3.3	Thermal Turbulence in Thin Shear Layers	267
6.3.4	Low-Reynolds-Number Effects on Turbulent Heat Transport	273
6.3.5	Heat Transport in Separated Flows	279
References		284

7. Two-Phase and Non-Newtonian Flows

By J. L. LUMLEY (With 9 Figures)

7.1	Physical Features of Particle-Laden Flows	290
7.1.1	Particle Interaction	290
7.1.2	Non-Spherical Particles	291
7.1.3	Foams and Slurries	292
7.1.4	Particle Pickup	293
7.1.5	Migration	293
7.1.6	The Continuum Approximation	294
7.2	Isolated, Heavy, Rigid, Spherical Particles	295
7.2.1	The Equations of Motion	296
7.2.2	The Inertia Effect and the Relative Reynolds Number	299
7.2.3	The Crossing-Trajectories Effect	304
7.2.4	Estimates for the Variances	305
7.3	Effect of Particles on Shear Flows	308
7.3.1	Heavy, Inertia-Free Particles	309
7.3.2	Light Particles with Inertia	313
7.3.3	Neutrally Buoyant Particles	317
7.4	Drag Reduction by Polymer Additives	318
7.4.1	Behavior of Macromolecules in Homogeneous Deformation	319
7.4.2	Macromolecules in Turbulent Flows	321
7.4.3	Effect of Macromolecules in Shear Flows	322
References		323
