

TABLE OF CONTENTS

	Page
Chapter One. Introduction: On the Absence of Geometry from Morphometrics	1
FIRST PART. THE MEASUREMENT OF BIOLOGICAL SHAPE	
Chapter Two. Shapes and Measures of Shape	4
A. Properties of the Euclidean Plane and Euclidean Space	4
B. Outlines and Homologous Landmarks	6
C. Definitions of Shape, Shape Change, Shape Measurement	8
D. Shapes as Data	11
Chapter Three. Critique of an Applied Field: Conventional Cephalometrics	13
A. Landmarks, Curvature, and Growth	13
B. Registration	19
Chapter Four. New Statistical Methods for Shape	27
A. Analysis of the Tangent Angle Function	27
1. History	27
2. Sampling from the tangent angle function	30
3. Conic replacement curves and their estimation	34
Fit of a conic to a point - Geometric interpretation - Estimator for a circle - Estimation for the general conic - Computation of the extremum - Linear constraints	
4. Conic splining	45
Joint conic fitting under constraint - An example - Application - Analysis of parameters	
B. Extension to Three Dimensions: A Sketch	55
C. Skeletons	57
Definition - A multivariate statistical method - Bibliographic note	
SECOND PART. THE MEASUREMENT OF SHAPE CHANGE USING BIORTHOGONAL GRIDS	
Chapter Five. The Study of Shape Transformation after D'Arcy Thompson	64
A. The Original Method	67
1. Thompson's own work	67
2. Later examples	72
3. Difficulties	75

TABLE OF CONTENTS (continued)

B. Analysis of Growth Gradients	78
C. Simulations	82
D. Other Morphometric Schemes	86
Vector displacements - Multivariate morphometrics	
Chapter Six. The Method of Biorthogonal Grids	90
A. Representation of Affine Transformations	90
B. General Lines of Growth and Biorthogonal Grids	92
C. Summarizing the Grids	99
Technical Note 1. Existence and Form of Biorthogonal Grids	103
Technical Note 2. Interpolation from Landmark Locations and Arcs	108
The measure of roughness - The vector space and its associated functions - Interpolation from boundary values - Interpolation from boundary values and interior points - Note on computation	
Technical Note 3. Construction of Integral Curves	118
Technical Note 4. On Homologous Points	120
Chapter Seven. Examples of Biorthogonal Analysis	124
A. Comparison of Square and Biorthogonal Grids: Thompson's <u>Diodon</u> Figure	124
B. Phylogeny and Ontogeny of Primate Crania	128
1. Functional craniology and craniometrics	129
2. Data for this exercise	134
3. Two types of transformations	136
4. Comparative ontogeny of the apes and man	144
Chapter Eight. Future Directions for Transformation Analysis	154
A. Statistical Methods	154
The symmetric tensor field - Concordance - Linear methods	
B. Computation	159
Other kinds of information about homology - Three dimensions	
C. Likely Applications	164
Computed tomography - Orthodontics - Developmental biology	
Chapter Nine. Envoi	172
Literature Cited	174
