

Contents

1. Introduction (Historical Survey)	1
2. Wave Equation and Its Solution for Transparent Infinite Crystal	15
2.1 Wave Equation and Its Solution	15
2.2 Two-Wave Approximation. Dispersion Surface	28
3. Transmission of X-Rays Through a Transparent Crystal Plate. Laue Reflection	37
3.1 Wave Fields Inside a Crystal	37
3.1.1 Semi-infinite Crystal. Connection with Experimental Conditions. Refraction Effect	37
3.1.2 Wave Amplitudes; Pendulum Solution. Extinction. Quasi-standing Waves	48
3.2 Transmission and Reflection Coefficients. Analysis of Pendulum Solution in the Case of Plane-Parallel Plate	55
3.3 Transmission Through a Wedge-Shaped Plate	67
4. X-Ray Scattering in Absorbing Crystal. Laue Reflection	78
4.1 Atomic Scattering and Absorption	78
4.2 Complex Form of Dynamical Scattering Parameters	88
4.3 Derivation of Exact Formulae for Transmission (T) and Reflection (R) Coefficient in the Case of an Absorbing Crystal ..	99
4.4 Derivation of Approximate Equations for Transmission Coefficient T and Reflection Coefficient R	103
4.5 Analysis of Approximate Equations for the Transmission Coefficient T and the Reflection Coefficient R	108
4.5.1 Symmetrical Reflection	109
4.5.2 Asymmetrical Reflection	115
4.6 Integrated Values of Reflection R_i and Transmission T_i in the Case of Absorbing Crystal	121
4.7 Analysis of Expressions for Integrated Values R_i and T_i as Applied to Important Particular Cases	131

5.	Poynting's Vectors and the Propagation of X-Ray Wave Energy	142
5.1	Averaged Poynting's Vector in the General Case	142
5.2	The Triply Averaged Poynting's Vector in Transparent Crystal	147
5.3	Triply Averaged Poynting's Vector in Absorbing Centro- symmetrical Crystal	159
5.4	Energy Propagation in Absorbing Crystal Without a Centre of Symmetry, Taking into Account the Periodic Component of Poynting's Vector. Additional Remarks	172
6.	Dynamical Theory in Incident-Spherical-Wave Approximation	179
6.1	Dynamical Theory in a Two-Wave Approximation with Spherical Wave Incident on Crystal. Application to Scattering in Trans- parent Plane-Parallel and Wedge-Shaped Crystals	181
6.2	Application of the Theory Described to Scattering in Absorb- ing Crystal	204
7.	Bragg Reflection of X-Rays. I. Basic Definitions. Coefficients of Absorption; Diffraction in Finite Crystal	213
7.1	Reflection from Transparent Crystal	215
7.2	True Absorption in Bragg Reflection. Investigation of Coef- ficient of Absorption σ from Plane-Parallel Plate	229
7.3	Diffraction in Finite Crystal in Incident-Spherical Wave or Incident Wave Packet Approximation	237
8.	Bragg Reflection of X-Rays. II. Reflection and Transmission Coef- ficients and Their Integrated Values	249
8.1	Deriving General Expressions for Reflection and Transmission Coefficients	249
8.2	Bragg Reflection from Transparent Crystal	254
8.3	Bragg Reflection from Thick Absorbing Crystal	262
8.4	Integrated Reflection from Absorbing Crystal in Bragg Case	271
9.	X-Ray Spectrometers Used in Dynamical Scattering Investigations. Some Results of Experimental Verification of the Theory	281
9.1	Estimating Wavelength Spread and Angular Divergence of X-Ray Tube Radiation	282
9.2	Two-Crystal Spectrometer, Using Bragg Reflections in Both Crystals (Bragg-Bragg Scheme)	286
9.3	Three-Crystal Spectrometer	296

9.4	Other Types of Diffractometers	302
9.4.1	Double-Crystal Spectrometers of the Bragg-Laue and Laue-Laue Type	302
9.4.2	Multi-Crystal Diffractometers with MCC, with Symmetri- cal and Asymmetrical Bragg Reflections	304
9.4.3	Rigorous Theory of X-Ray Diffractometers	310
9.4.4	Investigation and Utilization of Bragg-Reflection Curves	311
9.4.5	Investigations into the Interference Effects of the Pendulum Solution	325
	Determining the Absolute Values of Atomic Amplitudes	325
	Some Other Pendulum Solution Investigations	327
10.	X-Ray Interferometry. Moiré Patterns in X-Ray Diffraction	332
10.1	Three-Crystal Interferometers	333
10.2	Two-Crystal Interferometer	337
10.3	Formation and Utilization of X-Ray Moiré Patterns	347
10.4	Experimental Investigations. Three-Crystal Interferometer .	359
10.4.1	Double-Crystal Interferometer	365
11.	Generalized Dynamical Theory of X-Ray Scattering in Perfect and Deformed Crystals	371
11.1	Deriving Fundamental Equations in the General Case of De- formed Crystal	372
11.2	X-Ray Diffraction in Perfect Crystal Under Conditions of Space-Inhomogeneous Dynamical Problem. Influence Functions of Point Source	381
11.3	Laue Reflection in Perfect Crystal	383
11.4	Bragg Reflection in Perfect Crystal	388
11.5	Application of Generalized Theory to Deformed Crystal. Rela- tionship Between Angular Variable α_n and Deformation Field	393
11.6	Fundamental Equations of Geometrical Optics of X-Rays	394
11.7	Approaches Based Upon Wave Theory	400
11.7.1	Rigorous Theory of Laue Diffraction of X-Rays in Crystal with Uniform Strain Gradient	400
11.7.2	Integral Formulation of Huygens-Fresnel Principle .	401
11.7.3	Quasi-classical Wave Field Asymptotes	409
11.7.4	Ray Trajectories	411
11.7.5	Integrated Intensity of Diffracted Wave	415
11.7.6	Conclusion	416

12. Dynamical Scattering in the Case of Three Strong Waves and More ..	419
12.1 Scattering in Nonabsorbing Crystal. Reference Coordinate Systems	422
12.2 System of Fundamental Equations in the Case of Three Strong Waves, and the Dispersion Surface Equation	430
12.3 Another Method of Deriving the Dispersion Surface Equation in a Three-Wave Case	433
12.4 Analysis of the Dispersion Surface Equation in the Case of Nonabsorbing Crystal	435
12.5 Deriving the Dispersion Surface Equation in the Case of Four Strong Waves	439
12.6 Coefficients of Transmission and Reflection for a Plane-Parallel Plate. Laue Reflection	442
12.7 Scattering in Absorbing Crystal. Introducing Complex Parameters of Scattering and the Coefficient of Absorption	447
12.8 The Relationship Between the Coefficient of Absorption and the Shape of the Dispersion Surface. EWALD's Criterion	451
12.9 Asymptotic Properties of the Dispersion Surface. Transition from the Multiwave to the Two-Wave Region	454
12.10 Symmetrical Cases of Multiwave Diffraction. Nonlinear Borrmann Effect	459
12.11 Scattering in Germanium and Silicon Crystals	467
12.12 Bragg Reflection of X-Rays in Multiwave Diffraction	474
12.13 Methods for Numerical Determination of Dispersion Surface and Electric Displacement Vectors	484
Appendix A	490
Appendix B	491
Appendix C	492
References	497
Subject Index	505
