

Contents

1	An Overview	1
1.1	Features of ICP-OES	1
1.2	Inductively-Coupled Plasma Optical Emission Spectrometry – the Name Describes the Technique	2
1.3	Distribution of ICP-OES	5
1.4	Related Techniques for Elemental Analysis	6
1.5	Terms	8
2	Plasma	11
2.1	The Spectrometric Plasma	11
2.2	Excitation to Emit Electromagnetic Radiation (Light)	19
2.3	Radio Frequency Generator	41
2.4	Sample Introduction System	43
3	Optics and Detector of the Spectrometer	69
3.1	Basic Principles of Optics	69
3.2	Detectors	89
3.3	Types of Emission Spectrometer Mounts	99
4	Method Development	103
4.1	Wavelength Selection	105
4.2	Processing and Correction Techniques	122
4.3	Non-spectral Interference	150
4.4	Optimization	157
4.5	Validation	161
5	Routine Analysis	173
5.1	Preparation	174
5.2	Calibration	177
5.3	Quality Assurance	188
5.4	Software and Data Processing	190
6	Trouble-shooting and Maintenance	191
7	Applications	199
7.1	General Notes	199
7.2	Comments on Selected Elements	200
7.3	Selected Applications	202

XII

8	Procurement of Equipment and Preparation of the Laboratory	229
8.1	Which Atomic Spectrometric Technique is the most Suitable?	229
8.2	Which ICP Emission Spectrometer is the Most Suitable?	232
8.3	Preparation of the Laboratory	235
9	References	238
