Part I Introduction and Foundations

1 Algebraic Modeling Languages: Introduction and Overview	3
Josef Kallrath	
1.1 Introduction	3
1.2 Models and the Contrast Between Declarative and Procedural	5
1.3 Example Problem: Declarative Versus Procedural	8
1.4 Modeling and Teaching: Conclusions	9
References	10
2 Towards a Self-Reflective, Context-Aware Semantic Representation of Mathematical Specifications	11
Peter Schodl, Arnold Neumaier, Kevin Kofler, Ferenc Domes, and Hermann Schichl	
2.1 The MoSMATH Project	11
2.2 Vision: The FMathL Project	12
2.3 Data Structure: The Semantic Memory	14
2.4 Processing: The Semantic Virtual Machine	16
2.5 Representation: The Type System	18
2.6 Higher Level Processing: CONCISE	21
2.7 Mathematical Modeling	21
2.8 Reflection	23
2.9 Examples of Expressions	24
References	31

Part II Selected Algebraic Modeling Systems

3 GUSS: Solving Collections of Data Related Models Within GAMS	35
Michael R. Bussieck, Michael C. Ferris, and Timo Lohmann	
3.1 Introduction	35

3.2	Design Methodology	37
3.2.1	GUSS Options	40
3.2.2	Implementation Details	41
3.3	Examples	42
3.3.1	Data Envelopment Analysis	42
3.3.2	Cross Validation for Support Vector Machines	46
3.3.3	SDDP	50
3.4	Conclusion	54
	References	55
4	Generalized Disjunctive Programming: Solution Strategies	57
	Juan P. Ruiz, Jan-H. Jagla, Ignacio E. Grossmann, Alex Meeraus, and Aldo Vecchietti	
4.1	Introduction	58
4.2	Generalized Disjunctive Programming	59
4.2.1	Formulation	59
4.2.2	Illustrative Example	60
4.2.3	Solution Methods	62
4.3	Generalized Disjunctive Programming Solvers	69
4.3.1	Logical Mixed Integer Programming (LogMIP)	69
4.3.2	Extended Mathematical Programming (EMP)	69
4.4	Conclusions	73
	References	74
5	Xpress–Mosel: Multi-Solver, Multi-Problem, Multi-Model, Multi-Node	77
	Susanne Heipcke	
5.1	Introduction	77
5.2	The Mosel Environment: Quick Tour	79
5.2.1	Basic Modeling and Solving Tasks	79
5.2.2	Programming with Mosel	83
5.2.3	Modules and Packages	86
5.2.4	Embedding and Deployment	89
5.3	The “Multis”	91
5.3.1	Multi-Solver	91
5.3.2	Multi-Problem	95
5.3.3	Multi-Model	97
5.3.4	Multi-Node	101
5.4	Summary	104
	Appendix: Complete Mosel Examples	105
	Solution Enumeration	105
	Column Generation for the Cutting Stock Problem	106
	References	110

6	Interval-Based Language for Modeling Scheduling Problems: An Extension to Constraint Programming	111
	Philippe Laborie, Jérôme Rogerie, Paul Shaw, Petr Vilfm, and Ferenc Katai	
6.1	Introduction	111
6.2	Conditional Interval Model	113
6.2.1	Usage and Rationale	113
6.2.2	Interval Variables	113
6.2.3	Presence Constraints	114
6.2.4	Precedence Constraints	115
6.2.5	Intensity Functions	115
6.2.6	Interval Composition Constraints	116
6.3	Complexity	117
6.4	Graphical Conventions and Basic Examples	118
6.4.1	Alternative Modes with Compatibility Constraints	118
6.4.2	Series/Parallel Alternative	119
6.4.3	Alternative Recipes	119
6.4.4	Temporal Disjunction	120
6.5	Sequence Variables	120
6.5.1	Usage and Rationale	120
6.5.2	Formal Semantics	120
6.6	Cumul Function Expressions	122
6.6.1	Usage and Rationale	122
6.6.2	Formal Semantics	123
6.6.3	Example	124
6.7	State Function Variables	125
6.7.1	Usage and Rationale	125
6.7.2	Formal Semantics	126
6.7.3	Example	127
6.8	Constraint Propagation and Search	127
6.8.1	Interval Variables	127
6.8.2	Logical Network	128
6.8.3	Temporal Network	129
6.8.4	Interval Composition Constraints	131
6.8.5	Other Constraints	131
6.8.6	Search	132
6.9	Examples	132
6.9.1	Flow-Shop with Earliness and Tardiness Costs	132
6.9.2	Satellite Scheduling	134
6.9.3	Personal Task Scheduling	137
6.10	Conclusion	141
	References	142

7 Using ZIMPL for Modeling Production Planning Problems 145
Ulrich Dorndorf, Stefan Droste, and Thorsten Koch

7.1 Introduction 145

7.2 ZIMPL 147

7.3 Formulating the **MLCLSP** with ZIMPL 149

7.4 ZIMPL in **INFORM**’s Training and Workflow 156

7.5 Conclusion 157

References 157

Part III Aspects of Modeling and Solving Real World Problems

8 Why Our Company Uses Programming Languages for Mathematical Modeling and Optimization 161
Hermann Gold

8.1 Introduction 161

8.2 An Answer Given by Experience from the Past 162

8.3 Reasons Arising from Mathematical Modeling and Solver Aspects 164

8.4 The Aspect of Modeling Transparency 167

References 168

9 Data Preparation for Optimization with R 171
Hans-Joachim Pitz

9.1 Introduction 171

9.2 What is R? 172

9.3 The History of R 172

9.4 How can the Preparation of Optimization Data be Supported with R? 173

9.5 How can R be Linked to Optimization Software 177

9.6 Summary 178

Appendix A: R Application for Generating a GAMS Data File 178

Appendix B: R-Output of the GAMS Include File 179

Appendix C: R Functions for Writing GAMS Sets and Parameters 179

References 183

10 VisPlain®: Insight by Visualization 185
Axel Hecker and Arnd vom Hofe

10.1 Introduction 185

10.2 A Simple Example 186

10.3 A More Realistic Example 188

10.3.1 Hovering Over a Node with the Mouse Pointer 189

10.3.2 Selecting Attributes 191

10.3.3 Derived and Calculated Attributes 192

10.3.4 Selecting Nodes for Reporting in Table Format 194

10.4 A Complex Example 195

10.5 Summary 197

**11 Economic Simulation Models in Agricultural Economics:
The Current and Possible Future Role of Algebraic
Modeling Languages 199**
Wolfgang Britz and Josef Kallrath

11.1 Introduction 199

11.2 Model Types in Agricultural Economics 200

11.2.1 Single Farm Models 200

11.2.2 Aggregate Programming Models 200

11.2.3 Partial Market Models 201

11.2.4 Computable General Equilibrium Models 203

11.2.5 General Developments and Summary 204

11.3 From Model to Tools and Consequences for the IT Concept 205

11.4 Challenges for Algebraic Model Languages 206

11.4.1 Language Structure and Modularization 206

11.4.2 GUIs and Report Generators 208

11.4.3 Parallel Execution 208

11.4.4 Where to Stop? 209

11.5 Summary and Conclusion 210

References 210

12 A Practioner’s Wish List Towards Algebraic Modeling Systems 213
Josef Kallrath

12.1 Introduction 213

12.2 Algebraic Reformulations of Nonlinear Relations 214

12.3 Constraints Defined on Sets 216

12.3.1 Modeling Non-Zero Variables 216

12.3.2 Modeling Sets of All-Different Elements 217

12.3.3 Upper Bounds on Sum of the Maximal *k* Variables 218

12.4 Inclusion of Programming Code 219

12.5 Special Mathematical Features 220

12.6 Better Support of Polyolithic Modeling and Solution
Approaches 220

12.7 L^AT_EX Output of all Relevant Objects 221

12.8 The Future 221
