V	Preface	
VI	Acknowledgments	
VIII	Table of Contents	
1	Introduction	
1	Historical Perspective	
2	The Beginnings of Modern Endosteal Implantology	
3	Prerequisites	
4	– Practice Structure—Instruments and Equipment	
6	– Patient Selection—The Dentist—Patient Dialogue	
7	– Patient Selection—Intraoral Contraindications	
7	Intraoral Contraindications	
7	– Unfavorable Intermaxillary Relationships	
7	– Problematic Occlusal and Functional Relationships	
7	– Pathologic Conditions in the Alveolar Bone	
7	– Radiation Therapy in the Jaw Region	
7	– Pathologic Alterations of Oral Mucosa	
7	– Xerostomia	
7	– Macroglossia	
7	– Unrestored teeth—Poor Oral Hygiene	
8	Patient Selection—General and Medical Contraindications	
8	– Temporary Limiting Contraindications	
8	– Acute Inflammatory Diseases and Infections	
8	– Pregnancy	
8	– Temporary Consumption of Certain Medications	
8	– Physical and Psychic Stress Situations	
8	Psychological Contraindications	
8	– Poor Patient Compliance	
8	– Alcohol and Drug Abuse	
8	– Neurosis, Psychosis	
8	– Problem Patients	
9	General Medical Contraindications	
9	– General and Nutritional Conditions—Age	
9	– Current Medications	
9	– Metabolic Disorders	
9	– Hematologic Disorders	
9	– Cardiac and Circulatory Diseases	
9	– Osseous Metabolic Disturbances	
9	– Collagen Disorders	
9	– The Dental Implant as a Potential Bacterial Focus	
10	Patient Selection—Information and Informed Consent	
10	– Medical/Dental History Questionnaire	
10	– Informed Consent	
11	Implant Materials	
11	General Requirements for Implant Materials	
11	– Biological Compatibility	
11	– Mechanical Compatibility	
11	– Functionality	
11	– Practicality	
12	Transplant and Implant Materials—Immunologic Classification	
12	Alloplastic Materials	
13	– Ceramics	
13	– Metals	
14	– Compound Materials	
15	Implant Types	
16	Titanium	
18	– Titanium Plasma-Sprayed Coating	
20	– Sandblasting—Surface Etching	
21	– Laser-Induced Surface Roughening	
22	Aluminum Oxide Ceramic	
24	Hydroxyapatite Coatings	
25	Implant Systems	
26	Brånemark Implant System	
28	– Edentulous Mandible—Required Surgical and Diagnostic Aids	
29	– Elevation of the Mucoperiosteal Flaps	
30	– Surgical Implant Placement	
34	– Uncovering the Implants	
35	– Prosthetic Treatment	
36	IMZ Implant System	
38	– Edentulous Mandible—Surgical Procedure for IMZ Implant Placement	
42	– IMZ Implants in a Distal Free-End Situation	
46	ITI Bonefit Implant System	
50	– Prosthetic Treatment—The Retentive Ball Attachment System	
52	Ledermann Screw Implant	
52	– Histopathologic advantages	
52	– Hygienic advantages	
53	– Surgical Placement of the Ledermann Screw Implant	
54	– Immediate Prosthetic Treatment	
56	– The Ha-Ti Implant System	
56	– Surgical Procedure	
59	Histopathology	
60	Morphology of the Tooth-Supporting Apparatus	
61	Histology of the Implant Bed	
62	Comparative Histopathology of Natural Teeth and Implants	
64	Osseous Healing—Early Phase	
65	Osseous Healing—Late Stage	
66	Healing in the Presence of Hydroxyapatite Ceramic	
68	Tissue Reactions in the Implant Bed around Calcium Phosphate Ceramics	
70	Ceramic-Coated Titanium Implants	
71	Use of Ceramic Materials for Ridge Augmentation	
72	Basic Biological Principles of Implant Healing	
72	– Foreign Body-Induced Chronic Inflammation—Foreign Body Reaction	
74	– Anchoring of Implants in Bone	
77	– Periodontal Inflammation	
77	– Peri-implant Inflammation	
78	– Etiology and Pathogenesis of Peri-implant Inflammation	
80	– Implant Loss	

81 Biomechanics	116 Surgical Stents—Partially Edentulous Patients
81 Biomechanical Procedures	118 Surgical Stent—Edentulous Patients
82 Methods of Analysis	120 Mandibular Distal Free-End Situation: Clinical Example
82 – Finite Element Analysis	122 Partially Edentulous Maxilla: Clinical Example
82 – Birefringence Analysis	125 The Surgical Procedure
82 – Load Measurements in vivo and in vitro	125 – Preoperative Measures
82 – Studies of the Strength of Bond between Implant and Bone	125 – Special Procedures
83 Biomechanically Oriented Implant-Prosthetic Planning	125 – Postoperative Measures
83 – Implant Mobility	126 Two-Stage and Single-Stage Dental Implant Systems
84 Implant Biomechanics—Partially Edentulous Jaw	126 – Primary Stability
86 Implant Biomechanics—Edentulous Mandible	127 – The Interface between Implant and Bone
86 – Implant-Borne Complete Denture	127 – Healing-in Times
87 – Implant-Borne Complete Denture	128 Primary Incision—Implant Placement
87 – Primary and Secondary Splinting	129 – Edentulous Mandible
88 Implant Biomechanics—Edentulous Maxilla	129 – Partially Edentulous Mandible
89 – Orthodontic Force Application—Experimental Results	130 – Primary Incisions—Maxilla
90 – Orthodontic Force Application—Clinical Use	132 Incision for Implant Uncovering
91 Special Diagnostic Methods for Implant Patients	133 – Crestal Incisions
92 Are There Age Limitations?	134 – Implant Uncovering—Apical Positioning of Flaps
94 Anatomic Prerequisites	136 – Implant Uncovering—Repositioned Flaps
94 – Resorptive Processes	138 – Implant Uncovering—Connective Tissue Transplant
94 – Soft Tissue Situation	139 Free Gingival Graft
94 – Available Bone	140 Electrosurgery
94 – Mandibular Canal	141 Indications for Endosteal Dental Implants
95 – – Height of Bone	142 Official Positions
95 – – Width of Bone	142 Clinical Experiences
95 – – Bone Shape (Contour)	143 Prosthetic Treatment
95 – – Length of Bone	143 The Edentulous Patient
95 – – Implant-Crown Relationship	144 Preprosthetic Measures
95 – Maxillary Sinuses	144 – Relative Ridge Augmentation
96 Quantitative Bone Availability	144 – Absolute Ridge Augmentation
96 – Classifications	145 – Ridge Augmentation Using Hydroxyapatite
97 Classification of the Edentulous Jaw (Misch and Judy 1987, 1990)	145 – Ridge Augmentation Using Iliac Crest Transplant with Vascular Pedicle
97 – Edentulous Mandible—Classification	145 – Endosteal Implants
98 Classification of Partially Edentulous Jaws (Misch and Judy 1987)	146 The Edentulous Mandible
100 Qualitative Bone Availability	147 – Implant-Retained Complete Overdenture (“Perio Overdenture”)
100 – Bone Quality—Surgical Implant Placement	147 – Comparison of Implant-Retained Overdentures and Implant-Borne Prostheses
101 – Bone Quality—Primary Prosthetic Loading	147 – – Advantages of Implant-Retained Overdentures
102 Radiographic Diagnosis	147 – – Disadvantages of Implant-Retained Overdentures
104 Lateral Cephalometric Radiograph	148 – Implant-Borne Prosthesis
104 Occlusal Radiograph	149 – Elastic Deformation of the Mandible
105 Tomography	149 – Comparison between Implant-Borne Bridges and Implant-Retained Overdentures
106 Computed Tomography	149 – – Advantages of Implant-Borne Bridgework
108 3D Reconstructions from CT Data	149 – – Disadvantages of Implant-Borne Bridgework
109 Measurement of Mucosal Thickness	
110 Study Model Analysis—Edentulous Patients	
114 Study Model Analysis—Partially Edentulous Patients	

150	Treatment Concept 1	213	– Comparison of Implant-Retained Overdenture and Implant-Borne Bridgework
151	– Bar Shapes	213	– – Implant-Retained Overdentures—Advantages
151	– Correct Bar Arrangement	213	– – Implant-Retained Overdentures—Disadvantages
153	– Denture Base Shape and Extent	214	– Implant-Borne Prosthesis
154	– Vertical Relation of the Bar to the Alveolar Ridge	215	– Masticatory Forces—Functional Valence
155	– Sagittal Relationship of the Bar to the Alveolar Ridge	215	– Number and Length of Implants
156	– Spatial Relationships of Bar Constructions	216	Treatment Concept 1
158	– Incorrect Bar Constructions	217	Treatment Concept 2
160	– Denture Relining—Corrections of the Bar Construction	218	Treatment Concept 3
162	Locking Devices	220	– Alternative Bar-Type Constructions
164	Ball Attachments	222	Treatment Concept 4
164	– Press Button Connectors (Brånemark System)	224	– Implant-Borne Extension Bridgework
165	– Ball Anchor (Bonefit System)	226	– Gingival Epithesis
166	Retention Using Magnets	228	– Two-Piece Frameworks
168	– Impression Taking and Determination of Intermaxillary Relationship	230	– Two-Piece Constructions
170	– Fabricating the Bar and Setting the Teeth in the Dental Laboratory	232	– Angled Abutments—EsthetiCone Abutments
172	– Bar Try-in—Wax Try-in	234	– Stress-Free Framework Fit
174	– Primary Remounting	236	– Combined Ridge Augmentation
176	– Delivery and Secondary Remounting	238	The Partially Edentulous Patient—Differential Therapeutic Possibilities
178	– Impression-Taking Using the Ivotray Method	240	The Partially Edentulous Patient—Distal Free-End Situation
180	Treatment Concept 2	240	– Tooth- and Implant-Borne Bridgework
182	– Attaching the Bar Matrix to the Denture—Direct and Indirect Techniques	241	– Purely Implant-Borne Bridges
184	– Alternative Types of Bar Retention	242	– Bridge Supported by IMZ Implant and Natural Tooth
186	– Alternative Methods for Retention	244	– Tooth- and Implant-Borne Bridge—IMZ System
186	– Locking Attachments	246	– Implant-Borne Bridgework—Brånemark System
187	– Copings	248	– Implant-Borne Single Crowns—Porcelain Restorations
189	– Precision Attachment Systems	249	– Esthetic Improvements—Brånemark System, EsthetiCone System
190	Treatment Concept 3	249	– UCLA Abutment
192	– Alternative Methods for Retention	250	– Implant-Borne Bridgework—Bonefit System
194	Treatment Concept 4	252	– IMZ System—Bridgework Supported by Implants and Natural Teeth
194	– Biomechanical Considerations	255	– Microbiologic Considerations
195	– Temporary Prosthetic Treatment	256	– Implant-Borne Bridgework—Brånemark System
196	– Impression Taking	258	– Implant-Borne Bridgework—Temporary Treatment
198	– Determining Intermaxillary Relation—Framework Construction—Try-in	259	– Ceramic (Porcelain) Restorations
200	– Delivery	260	– Split Constructions
202	Special Prosthetic Problems	261	Optimum Abutment Number
202	– Biomechanical Overload	261	– Determining the Number of Implants
202	– Esthetic Problems	261	– Prosthodontic Aspects
203	– Masticatory Function	261	– Microbiologic Aspects
203	– Speaking Function	262	– Strategically Important Abutments
204	IMZ System	263	– Stabilization of Compromised Natural Tooth Abutments
206	Esthetic Improvements with the Brånemark System	264	– Ante's Law
208	– Two-Piece Superstructures	265	– Superstructures: Screw-Retained or Cemented?
210	Edentulous Maxilla	266	– Removable Bridges
210	– Patient Selection	267	Single-Tooth Implants
211	– Anatomic Peculiarities	267	– Immediate Implantation
212	– Implant-Retained Overdenture in the Maxilla		

267	– Delayed Implantation	308	Checking the Peri-implant Soft Tissues
267	– Late Implantation	309	Periodontal Indices
268	Differential Therapy	310	Checking the Prosthetic Superstructure
268	– Orthodontic Space Closure	311	Checking Oral Hygiene
269	– Maryland Bridge	312	Individual Oral Hygiene
269	– Single-Tooth Implant	313	– Oral Hygiene Aids
270	Special Pre-implant Diagnosis for Single-Tooth Replacements	314	– Special Measures
270	– Radiographic Analysis	315	Professional Hygiene
270	– Study Model Analysis	317	Peri-implant Pathology
271	Smile Line	318	Etiologic Factors
271	Measuring of Mucosal Thickness	318	– Biomechanical Overload
272	Implant Axis Orientation in the Sagittal Plane	319	– Bacterial Infections
273	Horizontal Implant Axis Orientation	320	– Additional Possible Etiologic and Modifying Factors
274	Tübingen Immediate Implant–Frialit-1	320	– – Implant Shape and Implant Surface
276	Frialit-1 Implant	320	– – Peri-implant Soft Tissue Attachment
276	Design of Occlusion	321	Peri-implantitis: Classification–Guidelines for Therapy
278	– Immediate Implantation	322	Treatment of the Implant Surface
278	– Delayed Immediate Implantation	323	Mucositis
282	Prosthodontic Posts–Brånemark System	323	Hyperplasia
282	– Single-Tooth Abutment	323	Peri-implantitis, Class 1
285	– UCLA Abutment–Brånemark System	324	Peri-implantitis, Class 2–Leveling the Bone
286	– UCLA Abutment–Mesostructures	325	Peri-implantitis, Class 3–“Implantoplasty”
288	– Cera-One Abutment–Brånemark System	326	Peri-implantitis, Class 4
289	– Angled Transmucosal Components–Brånemark System	327	Combined Therapy
290	Single-Tooth Implant–IMZ Implant	328	Peri-implantitis, Class 4
292	Single-Tooth Implant–ITI Bonefit System	329	Guided Bone Regeneration
294	– Octa System–ITI Bonefit Implant	330	GBR Technique
296	Frialit-2 System	331	Augmentation Material
298	Blade Implants	331	Resorbable Membranes
299	Schemes of Occlusion	332	Augmentation Membranes
299	– Canine Guidance	334	Surgical Procedure–Primary Incision
299	– Group Function	334	– Suture Technique
299	– Balanced Occlusion	334	– Postoperative Care
300	Axial Implant Loading	335	Bony Dehiscences
300	The Occlusal Scheme of “Freedom in Centric”	336	Autologous Bone and Bone Replacement Materials
301	Porcelain Occlusal Surfaces	337	Ridge Augmentation–One-Step Procedure
301	Porcelain-Fused-to-Metal Frameworks	338	Immediate Implantation–Delayed Immediate Implantation
302	Implant-Retained Overdentures–Bilateral Balancing	340	Ridge Augmentation–Two-Step Procedure
302	Implant-Retained Overdentures–Setting the Teeth	342	Membrane Perforation
303	Implant-Borne Bridgework–Canine Guidance and Group Function	343	Complications
303	Distal Extension Bridgework–Checking the Occlusion	344	Intraoperative Complications
304	Increasing the Number of Bridge Abutments	344	– Hemorrhage
304	Occlusal Adjustment	344	– Nerve Damage
305	Follow-up Care	345	– Possible Consequences of Improper Implant Placement Technique
306	Checking the Peri-implant Osseous Condition	345	– – Dehiscence
307	Radiographic and Other Techniques	345	– – Perforation
		345	– – Damage to Adjacent Teeth

345	– – Insufficient Primary Stability	356	Perspectives for the Future
345	– Opening the Nasal or Maxillary Sinuses	356	– Education
345	– Jaw Fracture	356	– Treatment Planning
346	Immediate Postoperative Complications	356	– Concepts of Treatment
346	– Hemorrhage and Hematoma	356	– Implant Systems
346	– Edema	356	– Cost-Benefit Ratio
346	– Early Infection	357	“Osseointegration”—A Changing Definition?
346	– Wound Margin Dehiscence—Mucosal Perforation	357	– Open Questions
346	– Surgical Emphysema	358	Repositioning of the Inferior Alveolar Nerve
346	– Implant Mobility	358	– Surgical Procedure
347	Late Postoperative Complications	358	– Possible Complications
347	– Implant Fracture	358	– Microsurgical Repair of the Inferior Alveolar Nerve
347	– Chronic Sinusitis	360	The Sinus Floor Elevation Procedure (“Sinus Lift”)
348	– Chronic Pain	362	– Sinus-Lift—Augmentation Materials
348	– Secondary Nerve Damage	363	Titanium Superstructures
348	– Permanent Mucosal Irritations	364	– Procera Technique
349	Prosthetic Complications	366	– Modified Procera Technique
349	– Prosthetically Unfavorable Implant Location and Axis Orientation	368	Acknowledgments for Figures
350	– Loosening and Fracture of Prosthetic Posts	369	References
350	– Loosening and Fracture of Occlusal Screws	384	Index
350	– Framework Fracture		
351	– Esthetic Complications		
351	– Functional Complications		
352	– Implant Loss—Modification of the Superstructure		
353	Success Statistics		
353	– Criteria for Implant Success		
354	Statistical Methods		
355	Clinical Studies
