

Table of Contents

List of Symbols	xv
1 Maxwell's Equations	1
1.1 Introduction	1
1.2 Charge and Coulomb's Law	2
1.3 Electric Field Strength E and Displacement Field D	4
1.4 Electric Flux	5
1.5 Divergence of a Vector Field and Gauss' Integral Theorem	8
1.6 Work and the Electric Field	12
1.7 The Rotation of a Vector Field and Stoke's Integral Theorem	14
1.8 Potential and Voltage	19
1.9 The Electric Current and Ampere's Law	22
1.10 The Principle of Charge Conservation and Maxwell's First Equation	27
1.11 Faraday's Law of Induction	30
1.12 Maxwell's Equations	31
1.13 System of Units	35
2 Basics of Electrostatics	40
2.1 Fundamental Relations	40
2.2 Field Intensity and Potential for a given Charge Distribution	41
2.3 Specific Charge Distributions	44
2.3.1 One-dimensional, Planar Charge Distributions	44
2.3.2 Spherically Symmetric Distributions	45
2.3.3 Cylindrically Symmetric Distributions	48
2.4 The Field Generated by two Point Charges	51
2.5 The Ideal Dipole	57
2.5.1 The Ideal Dipole and its Potential	57
2.5.2 Volume Distribution of Dipoles	60
2.5.3 Surface Distributions of Dipoles (Dipole Layers)	63
2.5.4 Line Dipoles	69
2.6 Behavior of a Conductor in an Electric Field	72
2.6.1 Metallic Sphere in the Field of a Point Charge	73
2.6.2 Metallic Sphere in a Uniform Electric Field	77
2.6.3 Metallic Cylinder in the Field of a Line Charge	80
2.7 The Capacitor	81
2.8 E and D inside Dielectrics	84

2.9	The Capacitor with a Dielectric	88
2.10	Boundary Conditions for $\mathbf{E}$ and $\mathbf{D}$ and Refraction of Force Lines	90
2.11	A Point Charge inside a Dielectric	93
2.11.1	Uniform Dielectric	93
2.11.2	Plane Boundaries between two Dielectrics	95
2.12	A Dielectric Sphere in a Uniform Electric Field	97
2.12.1	The Field of a Uniformly Polarized Sphere	97
2.12.2	An Externally Applied Uniform Field as the Cause of Polarization	101
2.12.3	Dielectric Sphere (ϵ_i) and Dielectric Space (ϵ_a)	101
2.12.4	Generalization: Ellipsoids	104
2.13	Polarization Current	106
2.14	Energy Principle	108
2.14.1	Energy Principle in its General Form	108
2.14.2	Electrostatic Energy	111
2.15	Forces in the Electric Field	114
2.15.1	Force on the Plate of a Capacitor	114
2.15.2	Capacitor with two Dielectrics	115
3	Formal Methods of Electrostatics	117
3.1	Coordinate Transformations	117
3.2	Vector Analysis for Curvilinear, Orthogonal Coordinate Systems	121
3.2.1	Gradient	121
3.2.2	Divergence	121
3.2.3	Laplace Operator	122
3.2.4	Circulation	123
3.3	Some Important Coordinate Systems	124
3.3.1	Cartesian Coordinates	125
3.3.2	Cylindrical Coordinates	125
3.3.3	Spherical Coordinates	127
3.4	Some Properties of Poisson's and Laplace's Equations (Potential Theory)	128
3.4.1	Problem Description	128
3.4.2	Green's Theorems	128
3.4.3	Proof of Uniqueness	130
3.4.4	Models	132
3.4.5	Dirac's Delta Function (δ -Function)	132
3.4.6	Point Charge and δ -Function	135
3.4.7	Potential in a Bounded Region	136
3.5	Separation of Laplace's Equation in Cartesian Coordinates	139
3.5.1	Separation of Variables	139
3.5.2	Examples	142
3.5.2.1	Dirichlet Boundary Value Problem without Charges Inside	142
3.5.2.2	Dirichlet Boundary Value Problem with Charges Inside the Volume	147
3.5.2.3	Point Charge in Infinite Space	153
3.5.2.4	Appendix to Section 3.5: Fourier Series and Fourier Integrals	155

3.6	Complete Orthogonal Systems of Functions	159
3.7	Separation of Variables of Laplace's Equation in Cylindrical Coordinates	165
3.7.1	Separation of Variables	165
3.7.2	Some Properties of Cylindrical Functions	167
3.7.3	Examples	171
3.7.3.1	A Cylinder with Surface Charges	171
3.7.3.2	Point Charge on the Axis of a Dielectric Cylinder	175
3.7.3.3	Dirichlet's Boundary Value Problem and the Fourier-Bessel Series	177
3.7.3.4	Rotationally Symmetric Surface Charges in the Plane $z = 0$ and the Hankel Transformation	181
3.7.3.5	Charge Distributions that are not Rotationally Symmetric	183
3.8	Separation of Variables for Laplace's Equation in Spherical Coordinates	188
3.8.1	Separation of Variables	188
3.8.2	Examples	193
3.8.2.1	Dielectric Sphere in a Uniform Electric Field	193
3.8.2.2	A Sphere Carrying an arbitrary Surface Charge	195
3.8.2.3	Dirichlet's Problem for a Sphere	199
3.9	Multi-Conductor Systems	200
3.10	Plane Electrostatic Problems and the Flux Function	206
3.11	Analytic Functions and Conformal Mappings	210
3.12	The Complex Potential	217
4	The Stationary Current Density Field	232
4.1	The Basic Equations	232
4.2	Relaxation Time	235
4.3	Boundary Conditions	237
4.4	The formal analogy between $\mathbf{D}$ and $\mathbf{g}$	242
4.5	Some Current Density Fields	243
4.5.1	Point-like Current Source in Space	243
4.5.2	Line Sources	246
4.5.3	Mixed Boundary Value Problem	247
5	Basics of Magnetostatics	256
5.1	Basic Equations	256
5.2	Some Magnetic Fields	265
5.2.1	The Field of a Straight, Concentrated Current	265
5.2.2	Field of a Rotationally Symmetric Current Distribution in Cylindrical Conductors	271
5.2.3	The Field of a simple Coil	272
5.2.4	The Field of a Circular Current and a Magnetic Dipole	275
5.2.5	The Field of an Arbitrary Current Loop	282
5.2.6	The Field of a Conducting Loop in its Plane	284

5.3	Magnetization	286
5.4	Forces on Dipoles in Magnetic Fields	291
5.5	B and H in Magnetizable Media	293
5.6	Ferromagnetism	299
5.7	Boundary Conditions for B and H , and the Refraction of Magnetic Force Lines	304
5.8	Plate, Sphere, Hollow Sphere in a Uniform Magnetic Field	307
5.8.1	The Planar Plate	307
5.8.2	The Sphere	309
5.8.3	The Hollow Sphere	311
5.9	Imaging at a Plane	313
5.10	Planar Problems	321
5.11	Cylindrical Boundary Value Problems	322
5.11.1	Separation of Variables	322
5.11.2	Structure of Rotationally Symmetric Magnetic Fields	324
5.11.3	Examples	326
5.11.3.1	Cylinder with an Azimuthal Surface Current	326
5.11.3.2	Azimuthal Surface Currents in the x-y-Plane	330
5.11.3.3	Current Loop and Magnetizable Cylinder	332
5.12	Magnetic Energy, Magnetic Flux and Inductance Coefficients	335
5.12.1	Magnetic Energy	335
5.12.2	Magnetic Flux	339
6	Time Dependent Problems I (Quasi Stationary Approximation) . . .	343
6.1	Faraday's Law of Magnetic Induction	343
6.1.1	Induction by a Temporal Change of B	343
6.1.2	Induction through the Motion of the Conductor	344
6.1.3	Induction by simultaneous temporal Change of B and Motion of the Conductor	347
6.1.4	Unipolar Machine	349
6.1.5	Hering's experiment	351
6.2	Diffusion of Electromagnetic Fields	352
6.2.1	Equations for E , g , B , A	352
6.2.2	The Physics of these Equations	354
6.2.3	Approximations and Similarity Theorems	357
6.3	Laplace Transform	360
6.4	Field Diffusion in the Two-sided Infinite Space	364
6.5	Diffusion of a Field in a Half-Space	369
6.5.1	General solution	369
6.5.2	Field Diffusion from the Surface into a Half-space (Impact of the Boundary Conditions)	370
6.5.3	Diffusion of the Initial Field in the Half-Space (Impact of Initial Values)	374
6.5.4	Periodic Field and Skin Effect	376
6.6	Field Diffusion in a Plane Plate	381

6.6.1	General Solution	381
6.6.2	Diffusion of the Initial Field (Impact of Initial Condition)	382
6.6.3	Impact of Boundary Conditions	385
6.7	The Cylindrical Diffusion Problem	389
6.7.1	The Basic Formulas	389
6.7.2	The longitudinal Field B_z	391
6.7.3	The azimuthal Field B_ϕ	395
6.7.4	Skin Effect in a Cylindrical Wire	399
6.8	Limits of the Quasi Stationary Theory	402
7	Time Dependent Problems II (Electromagnetic Waves)	405
7.1	Wave Equations and their simplest Solutions	405
7.1.1	The Wave Equations	405
7.1.2	The simplest Case: Plane Wave in an Insulator	406
7.1.3	Harmonic Plane Waves	411
7.1.4	Elliptic Polarization	415
7.1.5	Standing Waves	416
7.1.6	TE- and TM Wave	418
7.1.7	Energy Density in and Energy Transfer by Waves	422
7.2	Plane Waves in a Conductive Medium	423
7.2.1	Wave Equations and Dispersion Relation	423
7.2.2	The Process is Harmonic in Space	425
7.2.3	The Process is Harmonic in Time	427
7.3	Reflection and Refraction	431
7.3.1	Reflection and Refraction for Insulators	431
7.3.2	Fresnel's Equations for Insulators	433
7.3.3	Nonmagnetic Media	436
7.3.4	Total Reflection	439
7.3.5	Reflection at a Conducting Medium	441
7.4	Potentials and their Wave Equations	442
7.4.1	The Inhomogeneous Wave Equation for $\mathbf{A}$ and ϕ	442
7.4.2	Solution of the Inhomogeneous Wave Equations (Retardation)	445
7.4.3	The Electric Hertz Vector	447
7.4.4	Vector Potential for $\mathbf{D}$ and Magnetic Hertz Vector	448
7.4.5	Hertz Vectors and Dipole Moments	450
7.4.6	Potentials for Uniformly Conductive Media without Volume Charges	452
7.5	Hertz's Dipole	454
7.5.1	Fields of Oscillating Dipoles	454
7.5.2	Far Field and Radiation Power	460
7.6	Frame Antenna	463
7.7	Waves in Cylindrical Wave Guides	466
7.7.1	Basic Equations	466
7.7.2	TM Waves	469
7.7.3	TE Waves	470
7.7.4	TEM Waves	470

7.8	Rectangular Wave Guide	475
7.8.1	Separation of Variables	475
7.8.2	TM Waves in a Rectangular Wave Guide	476
7.8.3	TE Waves in a Rectangular Wave Guide	478
7.8.4	TEM waves	479
7.9	Rectangular Cavities	481
7.10	Circular Wave Guide	485
7.10.1	Separation of Variables	485
7.10.2	TM Waves in a Circular Cylindrical Wave Guide	487
7.10.3	TE Waves in a Circular Cylindrical Wave Guide	489
7.10.4	The Coaxial Cable	490
7.10.5	Telegrapher's Equation	493
7.11	The Wave Guide as a Variational Problem	495
7.12	Boundary and Initial Value Problems	498
7.12.1	The Initial Value Problem of the Infinite, Uniform Space	499
7.12.2	The Boundary Value Problem of the Half-Space	503
8	Numerical Methods	506
8.1	Introduction	506
8.2	Basics of Potential Theory	506
8.2.1	Boundary Value Problems and Integral Equations	506
8.2.2	Examples	510
8.2.2.1	The One-dimensional Problem	510
8.2.2.2	Dirichlet's Boundary Value Problem of a Sphere	512
8.2.3	Mean Value Theorems of Potential Theory	515
8.3	Boundary Value Problems as Variational Problems	517
8.3.1	Variational Integrals and Euler's Equations	517
8.3.2	Examples	520
8.3.2.1	Poisson's Equation	520
8.3.2.2	Helmholtz Equation	523
8.4	Method of Weighted Residuals	528
8.4.1	Collocation Method	529
8.4.2	Method of Fractional Regions	531
8.4.3	Momentum Method	532
8.4.4	Method of Least Squares	532
8.4.5	Galerkin Method	533
8.5	Random-Walk Processes	537
8.6	Method of Finite Differences	541
8.6.1	Fundamental Relations	541
8.6.2	An Example	546
8.7	Finite Elements Method	549
8.8	Method of Boundary Elements	557
8.9	Method of Image Charges	562
8.10	Monte-Carlo Method	563

A	Appendices	569
A.1	Electromagnetic Field Theory and Photon Rest Mass	569
A.1.1	Introduction	569
A.1.2	Examples	574
A.1.2.1	Uniformly Charged Spherical Surface	574
A.1.2.2	The Plane Capacitor and its Capacitance	575
A.1.2.3	The Ideal Electric Dipole	577
A.1.2.4	The Ideal Magnetic Dipole	577
A.1.2.5	Plane Waves	579
A.1.3	Measurements and Conclusions	582
A.1.3.1	Magnetic Fields of Earth and Jupiter	582
A.1.3.2	Schumann-Resonances	583
A.1.3.3	Fundamental Limit – The Uncertainty Relation	584
A.2	Magnetic Monopoles and Maxwell's Equation	585
A.2.1	Introduction	585
A.2.2	Dual Transformations	587
A.2.3	Properties of Magnetic Monopoles	590
A.2.4	The Search for Magnetic Monopoles	591
A.3	On the Significance of Electromagnetic Fields and Potentials (Bohm-Aharonov Effects)	593
A.3.1	Introduction	593
A.3.2	The Role of Fields and Potentials	595
A.3.3	The Ehrenfest Theorems	597
A.3.4	Magnetic Field and Vector Potential in an infinitely long Coil	598
A.3.5	Interference of Electron Beams at Double Slit	599
A.3.6	Conclusions	603
A.4	Liénard-Wiechert Potentials	603
A.5	The Helmholtz Theorem	608
A.5.1	Derivation and Interpretation	608
A.5.2	Examples	611
A.5.2.1	Uniform Field inside a Sphere	611
A.5.2.2	Point Charge inside a Conducting Hollow Sphere	615
A.6	Maxwell's Equations and Relativity	616
A.6.1	Galilean and Lorentz Transformation	616
A.6.2	Lorentz Transformation as an Orthogonal Transformation	618
A.6.3	Some Consequences of the Lorentz Transformation	622
A.6.3.1	Lorentz Contraction	622
A.6.3.2	Time Dilatation	624
A.6.3.3	Relativistic Addition of Velocities	624
A.6.3.4	Aberration and Doppler Effect	626
A.6.4	Lorentz Transformation of Maxwell's equations	627
A.6.5	4-Vectors and 4-Tensors	629
A.6.5.1	Definitions	629
A.6.5.2	Some Important 4-Vectors	630
A.6.5.3	Field Tensor F	636

A.6.6	Examples	639
	A.6.6.1 Surface Charges and their Fields	639
	A.6.6.2 Currents and Volume Charges	641
	A.6.6.3 Force of a Current on a moving Charge	643
	A.6.6.4 Field of a Uniformly Moving Point Charge	644
A.6.7	Final Remarks	645
 Bibliography		647
 Generally Recommended Reading		648
