Preface	xi
Introduction	1
1 Examples of Toeplitz Operators with Infinite Index	
Auxiliary material	9
1.1 The space $L_p(\mathbb{R}, \varrho)$ and the operator $S_{\mathbb{R}}$	9
1.2 The classes $L_p^{\pm}(\mathbb{R}, \varrho)$	10
1.3 Normally solvable operators	12
1.4 Toeplitz operators	14
Examples of operators with infinite index	17
1.5 Blaschke products	17
1.6 An elementary singular function	22
1.7 Boundary degeneracy	27
References and comments	31
2 Factorization and Invertibility	
(p, ϱ) -factorization and Φ -theory	33
2.1 The space $L_p(\Gamma, \varrho)$ and the operator S_{Γ}	33
2.2 Classes of bounded and continuous functions	34
2.3 The classes $L_p^{\pm}(\Gamma, \varrho)$	35
2.4 The class $\text{fact}(p, \varrho)$	38
2.5 A sufficient condition for (p, ϱ) -factorizability	44
Factorization and Toeplitz operators with infinite index	46
2.6 Inner-outer factorization	46
2.7 The class $\text{fact}(\infty, p, \varrho)$ and one-sided invertibility	49
2.8 Examples of functions in $\text{fact}(\infty, p, \varrho)$	55
2.9 The argument of a Blaschke product	59
2.10 The argument of an outer function	66
References and comments	68

3 Model Subspaces

Model operator and model subspaces	71
3.1 Model subspaces	71
3.2 Deformation of the contour	75
3.3 Model subspaces on $\mathbb{R}$	83
3.4 Boundary behavior	88
Bases and interpolation in model subspaces	93
3.5 Bases	93
3.6 The Carleson condition and interpolation in $H^{p,q}(\Pi_{\pm})$	94
3.7 Sine-type functions	95
3.8 Bases of entire functions	96
3.9 Bases of meromorphic functions	99
3.10 Boundary interpolation	105
References and comments	108

4 Toeplitz Operators with Oscillating Symbols

Almost periodic discontinuities	111
4.1 Uniformly almost periodic functions	112
4.2 Model subspaces on bounded smooth curves	116
4.3 Standard almost periodic discontinuities	127
4.4 Well-posed problems for the Toeplitz equation	136
4.5 General discontinuities of almost periodic type	143
Semi-almost periodic discontinuities	147
4.6 The class <i>SAP</i>	147
4.7 Model function	149
4.8 Generalized factorization of <i>SAP</i> functions	152
4.9 Model subspaces	159
Whirl points of power type	161
4.10 Two-sided whirls	161
4.11 One-sided whirls	169
References and comments	171

5 Generalized Factorization of u -periodic Functions and Matrix Functions

5.1 Block Toeplitz operators	175
5.2 Generalized factorization of matrix functions	178
5.3 u -periodic matrix functions	181
5.4 Infinite index of logarithmic type	185
5.5 Infinite index of arbitrary order	188
5.6 Sufficient conditions for the theorem on general oscillations. Examples	204
5.7 Slow oscillations	216
5.8 Modelling of oscillations	218

5.9	Generalized almost periodic discontinuities	220
5.10	Generalized matrix periodic discontinuities	222
	References and comments	225
6	Toeplitz Operators Whose Symbols Have Zeros	
	The normalization principle	227
6.1	Normally solvable operators	227
6.2	Normalization of linear operators	228
	Normalization of Toeplitz operators	236
6.3	Symbols with polynomial degeneracy	236
6.4	Symbols with locally-polynomial degeneracy	244
6.5	Basic examples	256
	References and comments	261
	References	265
	Index	297
