Foreword.	xi
Abbreviations	xiii
List of figures	xvii
List of tables	xxiii
List of colour plates.	xxv
1 The development of underwater acoustics	1
1.1 Rationale.	1
1.1.1 Exploring the underwater environment	1
1.1.2 Influence of the propagation medium	2
1.1.3 Structure of sonar systems	4
1.1.4 Signal processing	5
1.2 Historical highlights.	5
1.2.1 The pioneers	5
1.2.2 World War II	6
1.2.3 After the War	6
1.2.4 Civilian developments	7
1.3 Outline of underwater acoustics applications.	7
1.3.1 Military applications	8
1.3.2 Civilian applications	8
2 Underwater acoustic wave propagation	11
2.1 Acoustic waves	12
2.1.1 Acoustic pressure	12
2.1.2 Velocity and density	13

2.1.3	Frequency and wavelength	13
2.1.4	The wave equation and its elementary solutions	14
2.1.5	Intensity and power.	16
2.2	Logarithmic notation: decibels and references	17
2.2.1	The decibel	17
2.2.2	Absolute references and levels	18
2.3	Basics of propagation losses	18
2.3.1	Geometrical spreading losses	19
2.3.2	Attenuation losses	19
2.3.3	Conventional propagation loss.	23
2.3.4	Effect from air bubbles	24
2.4	Multiple paths	26
2.4.1	Notion of multiple paths	26
2.4.2	Sea-surface interference	27
2.4.3	An ideal model of multipath propagation	28
2.4.4	Average energy flux in a waveguide	31
2.4.5	General sound field prediction.	33
2.5	Other deformations of underwater acoustic signals.	34
2.5.1	Doppler effect	34
2.5.2	Time characteristics of the echoes.	35
2.6	Sound velocity in the ocean.	36
2.6.1	Velocity parameters.	36
2.6.2	Velocity models	37
2.6.3	Sound velocity measurements	39
2.6.4	Depth-velocity profiles.	39
2.7	Geometrical investigation of the acoustic field.	41
2.7.1	Depth-velocity profile refraction	41
2.7.2	Sound ray calculations.	44
2.7.3	Losses from geometric spreading	46
2.7.4	Application of geometric acoustics	46
2.8	Underwater acoustic propagation – case studies.	47
2.8.1	Constant-velocity profile.	47
2.8.2	Isothermal profile	48
2.8.3	Deep channel.	51
2.9	Wave calculations of the acoustic field.	54
2.9.1	Modal method	55
2.9.2	Numerical solution of the wave equation.	59
2.9.3	Parabolic approximation.	59
3	Reflection, backscattering and target strength.	61
3.1	Wave reflection on a plane interface	62
3.1.1	Interface between two fluid homogeneous media	62
3.1.2	Reflection on a layered medium.	68
3.2	Backscattering from a target	69
3.2.1	Echo from a target	69

3.2.2	Target strength	71
3.3	Point targets	73
3.3.1	The ideal sphere	73
3.3.2	Fluid spheres	75
3.3.3	Scattering by gas bubbles	75
3.3.4	Target strength of fish	77
3.3.5	Arbitrarily shaped target	78
3.3.6	Submarine echoes	79
3.4	Extended targets	79
3.4.1	Computation principle	79
3.4.2	Volume backscattering	81
3.4.3	Surface backscattering	83
3.5	Reflection and scattering by a rough surface	85
3.5.1	Roughness and scattering	85
3.5.2	Coherent reflection	87
3.5.3	Backscattered field	88
3.6	Reflection and scattering at ocean boundaries	94
3.6.1	Reflection and scattering at the sea surface	94
3.6.2	The seafloor	95
4	Noise and signal fluctuations	103
4.1	Narrowband and wideband noise	104
4.2	Causes of underwater acoustic noise	107
4.2.1	Ambient noise	107
4.2.2	Ship-radiated noise	112
4.2.3	Self-noise	115
4.2.4	Interference and acoustic compatibility	117
4.3	Two approaches to noise modelling	118
4.3.1	Noise coherence	118
4.3.2	Spatial structure of noise intensity	120
4.4	Reverberation	122
4.4.1	The concept of reverberation	122
4.4.2	Reverberation modelling	123
4.4.3	Consequences of reverberation	124
4.5	Underwater acoustic noise reduction	125
4.6	Environment variability and signal fluctuations	127
4.6.1	Variations in the propagation medium	127
4.6.2	Nature of signal fluctuations	129
4.6.3	Amplitude distributions associated with signal fluctuations	129
5	Transducers and array processing	137
5.1	Underwater electro-acoustic transducers	137
5.1.1	Fundamental principles	137
5.1.2	Underwater acoustic sources and hydrophones	140
5.1.3	Hydrophones	145

5.1.4	Transducer modelling and design	145
5.1.5	Transducer installation	146
5.2	Transducer characteristics	147
5.2.1	Frequency response	147
5.2.2	Sensitivity	148
5.2.3	Source level	149
5.2.4	Near field and far field	150
5.2.5	Maximum transmission level – cavitation	152
5.2.6	Underwater acoustic transducer measurements	152
5.3	Transducer and array directivity	154
5.3.1	Notion of directivity	154
5.3.2	Theoretical results for simple geometry antennas	156
5.3.3	Combining directivity patterns	159
5.3.4	Directivity of wideband signals	160
5.3.5	Beamforming	162
5.3.6	Array focusing	170
5.3.7	Interferometry	172
5.3.8	Synthetic aperture sonar	172
6	Signal processing – principles and performance	179
6.1	Introduction	179
6.2	Preliminary notions	180
6.2.1	Signal design	180
6.2.2	Signal-to-noise ratio	187
6.3	Signal detection with passive sonars	191
6.3.1	Non-coherent detection	191
6.3.2	Broadband detection performance	191
6.3.3	Narrowband detection performance	192
6.3.4	Other operations in passive sonar processing	193
6.4	Active sonar signals and processing	194
6.4.1	Narrowband pulse signals	194
6.4.2	Frequency-modulated pulse (<i>chirp</i>)	197
6.4.3	Phase-modulated signals	201
6.5	Structure of sonar receivers	203
6.5.1	Typical sonar receiver	203
6.5.2	Time-varying gain	204
6.5.3	Signal demodulation	205
6.5.4	Adapted filtering	206
6.6	Sonar system performance	207
6.6.1	The sonar equation	207
6.6.2	Note about the reception threshold	208
6.6.3	Performance in detection	209
6.6.4	Error probability in digital communications	212
6.6.5	Parameter estimation errors	213

7	The applications of underwater acoustics	217
7.1	Navigation	217
7.1.1	Acoustic beacons	217
7.1.2	Echo-sounding	218
7.1.3	Speed measurements	219
7.1.4	Obstacle avoidance	220
7.2	Military applications	221
7.2.1	Passive sonars	221
7.2.2	Active sonars	225
7.3	Fisheries acoustics	228
7.3.1	Fishery sounders and sonars	228
7.3.2	Other equipment onboard fishing vessels	229
7.3.3	Scientific uses	229
7.4	Marine geology and seafloor mapping	232
7.4.1	Sidescan sonars	232
7.4.2	Multibeam sounders	234
7.4.3	Sediment profilers	235
7.4.4	Marine seismics	237
7.5	Physical oceanography	239
7.5.1	Ocean acoustic tomography	239
7.5.2	Global acoustics	241
7.5.3	Other physical oceanography applications	242
7.6	Underwater intervention	242
7.6.1	Acoustic positioning	243
7.6.2	Acoustic data transmission	244
8	Underwater acoustic mapping systems.	247
8.1	Introduction	247
8.2	Single-beam sounders	248
8.2.1	Overview	248
8.2.2	Performance and limits of single-beam sounders	252
8.3	Sidescan sonars	259
8.3.1	Overview	259
8.3.2	Performance and limits of sidescan sonars	264
8.3.3	Measuring bathymetry with a sidescan sonar	266
8.4	Multibeam echo sounders	268
8.4.1	Overview	268
8.4.2	Multibeam echo sounder structure	269
8.4.3	Bathymetry measurements	272
8.4.4	Sonar imaging with multibeam sounders	276
8.4.5	Performance of multibeam sounders	278
8.4.6	Examples of data collected by multibeam sounders	282
8.5	Sediment profilers	282
8.5.1	Overview	282
8.5.2	Sediment profiler performance	284

x Contents

8.5.3	Echo formation and consequences	285
8.6	Seabed identification and characterisation with sonars.	287
8.6.1	Applications and potential	287
8.6.2	Single-beam sounders.	289
8.6.3	Sidescan sonars	290
8.6.4	Multibeam sounders	290
8.6.5	Subbottom profilers.	292
9	Conclusion	295
9.1	Synthesis	295
9.1.1	Propagation	295
9.1.2	Reflection and backscattering	296
9.1.3	Noise and fluctuations	297
9.1.4	Transducers and array processing.	297
9.1.5	Signal processing	298
9.2	Current trends and perspectives	299
9.2.1	A major tool for monitoring and exploitation of the Earth	299
9.2.2	Underwater acoustics in perspective	301
	Appendices.	303
	Bibliography	331
	Index	341
