Epitaxial Growth and Electronic Structure of Self-Assembled Quantum Dots

Pierre M. Petroff	1
1. Introduction	1
2. Formation of Quantum Dots, Quantum Rings and Strain Effects on Island Nucleation	2
3. Positioning and Ordering Quantum Dots	4
3.1. Island Nucleation and Quantum Dot Lattices	6
4. Strain Effects and Growth Characteristics of Quantum Dots	8
5. Fundamental Electronic Properties of Self-Assembled Quantum Dots	10
5.1. The “Atom-Like” Shell Model for the Quantum Dots	10
5.2. Charged and Neutral Quantum Dots	11
6. Quantum Dot Based Devices	16
6.1. Information Storage using Quantum Dots	16
6.2. A Spin Polarized Quantum Dot Light Emitting Diode	18
7. Conclusions	20
References	21

Electronic Properties of Self-Assembled Quantum Dots

Pawel Hawrylak and Marek Korkusiński	25
1. Introduction	25
2. Single-Particle States	26
2.1. Strain Effects	27
2.2. Effective Mass Adiabatic Models	32
2.3. $\mathbf{k} \cdot \mathbf{p}$ Models	38
2.4. Tight-binding Models	42
2.5. First Principle Methods	43
2.6. Coupled Dots	45
3. Excitons in Quantum Dots	49
3.1. Excitons in Jacobi Coordinates	49
3.2. Magneto-Excitons	53
3.3. Exciton in a Double Quantum Dot Molecule	54
3.4. Exciton, Biexciton, and Charged Exciton	57

3.5. Exciton–Phonon Interaction and Raman Scattering	59
3.6. Exciton and Biexciton in an Optical Cavity	61
4. Multi-Exciton Complexes	62
4.1. Exact Diagonalization Technique	64
4.2. Hidden Symmetries	66
4.3. Excited States and Emission Spectra	71
5. Charged Quantum Dots	73
5.1. Ground State of Charged Dots	74
5.2. Emission	77
5.3. Absorption	81
5.4. Far-Infrared Spectroscopy	85
5.5. Photocurrent Spectroscopy	85
References	86

Exciton Complexes in Self-Assembled In(Ga)As/GaAs Quantum Dots

Manfred Bayer	93
1. Introduction	93
2. Experimental Technique	99
3. Excitonic Absorption in Quantum Dots	102
4. Dephasing of the Ground State Exciton	112
5. Fine Structure of Excitons and Excitonic Complexes	114
5.1. Faraday Configuration	117
5.2. Voigt Configuration	122
5.3. Fine Structure of the Biexciton	125
5.4. Charged Excitons	128
6. Quantum Dot Molecules	135
7. Conclusions	143
References	145

Optical Spectroscopy on Epitaxially Grown II–VI Single Quantum Dots

Gerd Bacher	147
1. Introduction	147
2. II–VI Single Quantum Dots – Intrinsic Properties	149
2.1. Single Excitons in a Quantum Dot	149
2.2. Biexcitons and Charged Excitons	157
3. Eigenstate Manipulation by External Fields	164
3.1. Applying Electrical Fields – The Stark Effect	164
3.2. Applying Magnetic Fields – The Zeeman Effect	167
4. Single Magnetic Semiconductor Quantum Dots	171
4.1. Giant Magneto-Optical Effects in a Zero-Dimensional System	171
4.2. Statistical Fluctuations of the Nano-Scale Magnetization	174
5. Summary and Outlook	178

Quantum-Dot Lasers

Heinz Schweizer, Michael Jetter and Ferdinand Scholz	185
1. Introduction	185
1.1. History of Dot Lasers	185
1.2. Motivation/Applications/Material Systems	187
1.3. Artificial versus Self Assembly	188
2. Epitaxially Fabricated Quantum Dot Lasers	189
2.1. Growth Considerations for Self-assembled Quantum Dot Laser Structures	191
2.2. Specific Problems of Self-assembled Quantum Dot Laser Structures	191
2.3. InAs-GaAs Quantum Dot Lasers	193
2.4. Red Light Emitting Dot Lasers	200
2.5. Nitride Quantum Dots for Laser Action	204
2.6. ZnSe Based Quantum Dot Lasers	205
3. Lithography Based Quantum Dot Laser Fabrication	206
3.1. Electron Beam Lithography	206
3.2. Structurization Technology	207
4. Basic Considerations	208
4.1. Electronic States and Statistics	208
4.2. Optical Transitions	210
4.3. Dot Laser Threshold and Laser Dynamics	211
5. Devices and Applications	219
5.1. Dot- and Wire-DFB-Lasers	219
5.2. Modulation Dynamics	221
5.3. Chirp	222
5.4. High Power Lasers	223
6. Conclusions	225
