About the author — V

Preface — VII

Acknowledgments — XI

Abbreviations — XVII

Nomenclature — XIX

Part I: Introduction to complex variables

1 Introductory concepts — 5

- 1.1 Preliminary concepts — 5
- 1.2 Polar form of complex variables — 8
- 1.3 Roots of numbers — 9
- 1.4 Functions of a complex variable — 11
- 1.5 Trigonometric and hyperbolic functions — 13
- 1.6 Inverse trigonometric and hyperbolic functions — 15
- 1.7 Differentiation of a function of a complex variable — 16
- 1.8 A note on the adequacy of the C-R conditions — 17
- 1.9 Regular functions — 18
- 1.10 Multivalued functions — 21
- 1.11 Riemann surface — 27
- 1.12 Two-dimensional integrals — 30
- 1.13 Cauchy-Goursat theorem — 35
- 1.14 Singularities and Cauchy's theorems — 37
- 1.15 Poisson's integral formula — 46
- 1.16 Miscellaneous examples — 47
- Problems — 49
- Suggested reading — 53

2 Laurent series, residue theorem, and contour integration — 54

- 2.1 Taylor series — 54
- 2.2 Analytic continuation — 63
- 2.3 Laurent series — 66
- 2.4 Classification of isolated singularities — 74
- 2.5 Residue theorem and contour integration — 75
- 2.6 Contour integration — 80

- 2.7 A few other theorems on improper integrals — **100**
- 2.8 Miscellaneous examples — **110**
 - Problems — **119**
 - Suggested reading — **126**

3 Conformal mapping and its applications — 129

- 3.1 Preservation of angles and sense of direction — **129**
- 3.2 Invariance of Laplace equation under conformal mapping — **133**
- 3.3 Common transformations — **135**
- 3.4 Application of eccentric circle conformal mapping in engineering analysis — **148**
- 3.5 Transformation of boundary conditions on harmonic functions — **152**
- 3.6 Multiple transformations — **154**
- 3.7 Finding a harmonic function in the UHP — **157**
- 3.8 More examples of conformal transformation — **160**
- 3.9 The Schwarz-Christoffel transformation — **165**
- 3.10 Miscellaneous examples — **180**
 - Problems — **187**
 - Suggested reading — **198**

4 Application of complex variable theory and conformal mapping to perfect fluid flow — 200

- 4.1 Notations — **200**
- 4.2 The complex potential for familiar flows — **202**
- 4.3 Blasius integral laws — **212**
- 4.4 Joukowski transformation and conformal mapping in airfoil design — **217**
 - Suggested reading — **235**

Part II: Complex integral transforms

5 The techniques of complex Laplace transform — 241

- 5.1 Theoretical background — **241**
- 5.2 Applications to partial differential equations (PDES) — **257**
- 5.3 Generalized unsteady diffusion problems — **278**
- 5.4 Miscellaneous examples — **280**
 - Problems — **287**
 - Suggested reading — **292**

6 Asymptotic behavior of complex integrals — 294

- 6.1 Introduction — 294
- 6.2 Asymptotic expansion — 299
- 6.3 Asymptotics of integrals — 320
- 6.4 Miscellaneous examples — 389
- Problems — 392
- Suggested reading — 399

7 The techniques of complex Fourier transform — 401

- 7.1 Generalization of Fourier transform — 401
- 7.2 Function splitting — 407
- 7.3 Convolution in Fourier transform — 418
- 7.4 Multidimensional Fourier transform — 424
- 7.5 The Wiener–Hopf techniques — 438
- 7.6 Miscellaneous examples — 459
- Problems — 463
- Suggested reading — 469

8 Modern applications of complex variables — 471

- 8.1 Recent advances in prime function-based mappings — 472
- 8.2 Ordinary differential equations in the complex plane — 477
- 8.3 Advances in relevant Schwarz-Christoffel (SC) mappings — 483
- 8.4 Numerical complex variable simulation — 487
- Suggested reading — 490

Appendix A Table of Laplace transforms pairs in diffusion analysis — 493

Appendix B Table of general properties of Laplace transforms — 497

Appendix C Table of common Laplace transform pairs — 499

Appendix D Table of special functions — 509

Appendix E Bessel Functions — 511

Appendix F Special functions — 517

XVI — Contents

Appendix G Miscellaneous functions — 523

Appendix H Table of transformations of regions — 545

List of figures — 565

Index — 575
