<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Systems Analysis: The Strategy of Modeling</b>	<b>5</b>
2.1	Methodology of Modeling	6
2.2	Stating the Modeling Problem	7
2.3	Organizing the Work	11
2.4	Developing the Model	14
2.4.1	Phenomenological Modeling	15
2.4.2	Algorithmization	18
2.4.3	Programming	21
2.4.4	Testing the Faithfulness of a Model	22
2.5	Performing a Computational Experiment	24
2.6	Conclusion	27
	References	30
<b>3</b>	<b>Constitution and Model Description of the Structural Characteristics of Metallurgical Melts</b>	<b>33</b>
3.1	Structural Characteristics of Melts	33
3.1.1	Radial Distribution Function and Structure Factor	33
3.1.2	Partial Structure Factors	36
3.1.3	Model Description of Structural Characteristics	39
3.1.4	Pair Interaction Potential	47
3.2	Constitution of Metallic Melts	52
3.2.1	Iron, Nickel, Cobalt	53
3.2.2	Iron–Carbon	57
3.2.3	Iron–Boron	64
3.2.4	Iron–Silicon	67
3.3	Oxide Melts	71
3.3.1	Ferrous Oxide $\text{Fe}_{1-x}\text{O}$	73
3.3.2	The $\text{FeO}\text{--}\text{Fe}_2\text{O}_3\text{--}\text{SiO}_2$ System	77

3.3.3	The $\text{FeO-Fe}_2\text{O}_3\text{-CaO}$ System . . . . .	82
3.3.4	The $\text{SiO}_2\text{-CaO-MgO}$ System . . . . .	85
3.3.5	The $\text{SiO}_2\text{-CaO-Al}_2\text{O}_3$ System . . . . .	87
3.3.6	The $\text{MnO-TiO}_2\text{-SiO}_2$ System . . . . .	89
3.3.7	Constitution and Electrical Properties of Melts Containing Iron Oxides . . . . .	92
3.3.8	Calculation of the Activities and Ionic Composition of Slag Melts Based on Polymer Theory . . . . .	95
3.3.9	Diffusion of Ions in Molten Slags . . . . .	108
	References . . . . .	125
<b>4</b>	<b>Modeling and Simulation of High-Temperature Processes . . . . .</b>	<b>135</b>

4.2	Thermodynamic Characteristics of Interaction Processes in a Metal-Slag-Gas System . . . . .	138
4.2.1	Method for Calculating the Equilibrium Distribution of Elements in Multicomponent Systems . . . . .	139
4.2.2	Distribution of Boron, Aluminum, and Phosphorus between Liquid Metal and Slag Phases . . . . .	141
4.2.3	Equilibrium Distribution of Tungsten Between Liquid Metal and Slag Phases . . . . .	146
4.2.4	Calculation and Experimental Determination of the Equilibrium Distribution Coefficients of Sulfur . . . . .	148
4.2.5	Investigation of the Equilibrium Concentrations of the Components in a Nickel-Alloy/Oxyfluoride-Slag System . . . . .	152
4.2.6	Equilibrium Distribution of Silicon, Manganese, and Titanium Between the Metal and Oxyfluoride Melts . . . . .	154
4.3	Methods for the Kinetic Analysis of Multimolecular and Simultaneously Occurring Reactions . . . . .	156
4.3.1	Analysis of the Kinetics of an Interaction Under Steady-State Conditions . . . . .	156
4.3.2	Development of a Method for Analyzing the Kinetics of Simultaneously Occurring Electrode Reactions Under Non-Steady-State Conditions . . . . .	166
4.3.3	Procedure for Evaluating the Kinetic Laws Governing Electrochemical Processes on a Metal/Polymeric-Oxide-Melt Boundary . . . . .	172
4.3.4	Kinetic Parameters of the Passage of Elements Through the Interface in a Metal/Oxide-Melt System . . . . .	180
4.4	Conclusion . . . . .	203
	References . . . . .	205

<b>5 Modeling and Simulation of Technological Processes for Producing and Refining Steel</b> . . . . .	211
5.1 Mathematical Modeling of Steel Smelting Processes . . . . .	211
5.2 Development of a Mathematical Model of the Ladle Refinement of a Metal by a Synthetic Slag. . . . .	218
5.3 Predicting the Composition of the Metal in the Head Part of an Ingot During the Teeming of Steel Under Siliceous Heat-Generating Mixtures. . . . .	225
5.4 Development of Mathematical Models of Refining Remelts . . . .	232
5.4.1 Mathematical Model of the Alloying of a Metal with Nitrogen During Plasma Arc Remelting . . . . .	232
5.4.2 Mathematical Model of the Interaction of the Metal, Slag, and Gas During Vacuum Arc Remelting . . . . .	241
5.4.3 Mathematical Model of the Physicochemical Processes in the Electron-Beam Remelting of Alloys. . . . .	250
5.5 Conclusion . . . . .	260
References . . . . .	261
<b>6 Modeling and Simulation of Welding, Surfacing and Coating Processes</b> . . . . .	265
6.1 Mathematical Modeling of Phase Interaction Processes in Electroslag Technologies . . . . .	265
6.1.1 Fundamentals of the Mathematical Model of the Phase Interaction in Electroslag Technologies. . . .	266
6.1.2 Mathematical Model of the Chemical Processes Occurring in the Electroslag Remelting of Steels . . . . .	268
6.1.3 Mathematical Modeling of the Chemical Processes Occurring in Electroslag Welding and Surfacing. . . . .	275
6.1.4 Allowing for Deoxidization of the Slag Pool by Metallic Components in Electroslag Technologies . . .	277
6.1.5 Mathematical Model of the Chemical Processes Occurring in Centrifugal Electroslag Casting . . . . .	279
6.2 Calculated Evaluation of the Kinetics of the Interaction of a Multicomponent Metal and a Slag During Submerged-Arc Welding . . . . .	286
6.3 Simulation of the Interaction Processes in Submerged-Arc Welding with a Ceramic Flux . . . . .	294
6.4 Mathematical Model of the Kinetics of the Chemical Processes Occurring in Gas Welding . . . . .	299
6.5 Calculation of the Composition of the Metal and the Slag During the Melting of Coated Electrodes and Flux-Cored Wires . . . . .	302

- 6.6 Mathematical Model of the Motion, Heating, and Oxidation Processes Occurring in Electric-Arc Spraying . . . . . 304
- 6.7 Conclusions . . . . . 319
- References . . . . . 320
- 7 Predicting the Structure, Phase Composition and Properties of the Metal During Welding and Surfacing . . . . . 323
  - 7.1 Predicting the Quantitative and Qualitative Composition of Hardening Phases . . . . . 324
  - 7.2 Predicting the Phase and Structural Composition of the Matrix of a Deposited Metal . . . . . 329
  - 7.3 Mathematical Description of the New Constitution Diagram of the Matrix of a Deposited Metal . . . . . 332
  - 7.4 Experimental Testing of the Methods Developed. . . . . 340
  - 7.5 Calculation of the Composition and Amounts of the Phases in Equilibrium Multicomponent Alloys Based on Iron . . . . . 342
  - 7.6 Conclusion . . . . . 352
  - References . . . . . 353
- 8 Using Modeling and Simulation to Improve High-Temperature Technologies . . . . . 357
  - 8.1 Improving the Technological Scheme of the Oxidative Remelting of Tungsten-Containing Scrap . . . . . 357
  - 8.2 Development of Compositions of Synthetic Slags for the Ladle Refinement of Steel. . . . . 363
  - 8.3 Improvement of Electroslag Technologies Based on Mathematical Modeling of the Interaction Processes of the Metal, Slag, and Gas . . . . . 367
    - 8.3.1 Influence of the Composition of the Weld Metal on Pore Formation during the Electroslag Welding of Press Columns . . . . . 367
    - 8.3.2 Influence of the Flux Composition and the Oxidation Level of the Electrode on the Chemical Heterogeneity of the Ingot during the Electroslag Remelting of 38Kh2MYuA Steel . . . . . 371
    - 8.3.3 Optimization of the Technology for Alloying 45 Steel with Lead from a Flux. . . . . 374
  - 8.4 Selecting the Compositions of Alloying and Ceramic Fluxes Based on Mathematical Modeling of the Processes Involved in the Interaction of the Metal and the Slag During Welding . . . 382

8.5	Practical Implementation of the Concept of Creating Advanced Welding Materials . . . . .	389
8.5.1	Design, Preparation, and Testing of an Experimental Batch of Surfacing Materials . . . . .	389
8.5.2	Creation of Advanced Welding Materials. . . . .	400
8.6	Conclusion . . . . .	401
