

Table of Contents

Abstract	1
I. Introduction	2
II. Statistical Mechanical Theory of Transport Processes for Multi-component Poly-atomic Fluids	7
Generalized Coordinates and Momenta	7
Forces and Torques	14
Distribution Functions	19
Statistical Mechanical Expressions for Macroscopic Observables	27
Canonical Ensemble Distribution Functions ..	41
Non-equilibrium Distribution Functions	49
Equations of Continuity and Motion	56
III. Continuum Model for a Fluid	65
Steady State Equations of Motion	66
Approximate Steady State Equations of Continuity	76
The Kinetic Effect	86
The Electrophoretic Effect	92
IV. Electrolytic Transport of Non-electrolytes: An Approximate Theory Valid at Infinite Dilution ...	95
A Model Representing the Solution Containing Non-electrolyte Molecules and Electrolyte Ions	96

IV.

An Approximate Theory Valid at Infinite	
Dilution	101
Electrolytic Transport of an Ideal Dipolar	
Non-electrolyte	108
V. Electrolytic Transport of Non-electrolytes:	
Comparison of Experimental and Theoretical	
Mass Transport Ratios	143
Experimental Mass Transport Ratios	143
Theoretical Mass Transport Ratios	151
Comparison of Theory with Experiment	160
Acknowledgments	
166	
Appendix A: Surface Harmonics	
167	
Appendix B: Selected Differential Properties of	
the Surface Harmonics	170
Appendix C: Calculation of Integrals over Angles	
of Vectors and Tensors	174
Appendix D: Some Electrostatic Problems	
177	
Appendix E: Values of the Function $G(\underline{x})$	
192	
Appendix F: Values of the Functions $H(\underline{x})$, $K(\underline{x})$,	
and $L(\underline{x})$	193
Appendix G: Important Physical Constants	
195	
Appendix H: Physical Properties of Water	
196	
Appendix I: Physical Properties of Electrolyte Ions ..	
197	

Appendix J: Physical Properties of Non-electrolyte	
Molecules	200
Footnotes (Comments and References)	207
