

Contents

1. The Description of a Material	1
1.1 The State Quantities	1
1.2 Velocities. Strain Rates. Rigid Body Velocities	1
2. The Principle of Virtual Power	3
2.1 Virtual Power of the Interior Forces	3
2.2 Virtual Power of the Exterior Forces	4
2.3 Virtual Power of the Acceleration Forces	5
2.4 The Equations of Motion	5
3. The Constitutive Laws. Case of No Constraint on the State Quantities or Their Velocities	7
3.1 Introduction and Definitions	7
3.2 The Balance Equations	7
3.3 The Constitutive Laws	9
4. The Constitutive Laws. Case with Constraints on the State Quantities	15
4.1 Internal Constraints. The Free Energy	15
4.2 The Balance Laws	18
4.3 The Constitutive Laws	18
4.4 Pseudopotential of Dissipation	22
4.4.1 Internal Constraints	
on Quantities Which Describe the Evolution	23
4.5 When the Temperature Can Be Zero	25
4.6 An Example	27
5. The Constitutive Laws on a Discontinuity Surface	33
5.1 Pseudopotential of Dissipation	40
5.2 When the Average Temperature Can Be Zero	41
5.3 Definition of a Material.	
Utilisation of the Theory on a Discontinuity Line	42
5.4 The Gradient of a State Quantity Is Involved	
in the Power of the Interior Forces	43

5.5	Example 1. Shock in an Adiabatic Ideal Fluid	44
5.6	Example 2. Adiabatic Material	47
5.7	Example 3. Solid–Liquid and Liquid–Vapour Phase Change . .	47
5.8	Example 4. The Temperature Is Discontinuous: Rain Falling on Ice	49
5.9	Example 5. Shock in Plasticity	55
5.10	Example 6. Contact Surface	56
6.	Deformable Solids with Interactions at a Distance	59
6.1	The Strain Rates	60
6.1.1	The Actual Strain Rates	61
6.2	The Powers of the Interior and Exterior Forces	63
6.3	The Equations of Motion	66
6.4	The Energy Balance	68
6.5	The Constitutive Laws	75
6.6	Examples of Mechanical Constitutive Laws	83
6.7	Other Impenetrability Constraints and Interactions at a Distance	84
6.7.1	Volume Interactions at a Distance and Impenetrability Constraint	84
6.7.2	Another Impenetrability Constraint	89
6.8	Examples of Thermal Constitutive Laws	90
7.	Deformable Solids Without Interaction at a Distance	93
7.1	Example 1. Unilateral Coulomb Friction	94
7.2	Example 2. Collision of a Deformable Solid with a Rigid Half-space	95
7.3	Instantaneous Collision	98
8.	Collision of Rigid Bodies. Multiple Collisions	101
8.1	Introduction	101
8.2	The Distance Function	102
8.3	The Velocities and the Strain Rate	102
8.3.1	The Virtual and Actual Velocities	103
8.3.2	The Strain Rate	103
8.3.3	The Time Derivatives of the Distance and the System Strain Rate	104
8.4	The Virtual Works	107
8.5	The Equations of Motion	108
8.6	The Energy Balance at Constant Temperature	110
8.6.1	Smooth Evolution at Constant Temperature	111
8.6.2	Collision at Constant Temperature	112
8.7	The Constitutive Laws at Constant Temperature	115
8.7.1	Smooth Evolution at Constant Temperature	115
8.7.2	Collision at Constant Temperature	116

8.7.3	The Impenetrability Reaction	118
8.8	The Energy Balance with Evolving Temperature	120
8.8.1	Smooth Evolution with Evolving Temperature.....	122
8.8.2	Collision with Evolving Temperature	124
8.9	The Constitutive Laws with Evolving Temperature	127
8.9.1	Smooth Evolution with Evolving Temperature.....	127
8.9.2	Collision with Evolving Temperature	129
8.10	First Example of Collision Constitutive Law	133
8.11	Second Example of Collision Constitutive Law	135
8.12	Third Example of Collision Constitutive Law	138
8.13	Fourth Example of Collision Constitutive Law	140
8.14	Fifth Example of Collision Constitutive Law	141
8.15	Examples of Thermal Constitutive Law	143
8.15.1	There Is No Collision.....	143
8.15.2	There Is A Collision.....	143
8.15.3	An Example	144
8.16	Case Where the Solid Is Not Convex.....	146
8.17	Collision at a Non-smooth Point.....	146
8.17.1	The Equations of Motion	149
8.17.2	The Energy Balance in a Collision at Constant Temperature	151
8.17.3	The Constitutive Laws at Constant Temperature ...	152
8.17.4	An Example	155
8.17.5	Collision in a Reentrant Angle Smaller Than 90° ...	155
8.17.6	Collision in a Reentrant Angle Between 90° and 180°	156
8.17.7	Collision with an Angular Wedge Whose Angle Is Between 180° and 270°	156
8.17.8	Collision with an Angular Wedge Whose Angle Is Between 270° and 360°	157
8.17.9	Collision with a Plane or in a Flat Angle	158
8.17.10	The Velocity Before the Collision Is Zero and There Is No Exterior Percussion	159
8.18	Multiple Collision	159
8.18.1	Situation 1. Point <i>A</i> Remains Fixed and Point <i>B</i> Bounces	162
8.18.2	Situation 2. The Point <i>A</i> Moves and Point <i>B</i> Stops .	162
8.18.3	Situation 3. The Points <i>A</i> and <i>B</i> Stop	163
8.18.4	Situation 4. The Points <i>A</i> and <i>B</i> Move	163
8.18.5	Summary of the Results	164
8.19	Simple Collision on a Vertex	165
8.19.1	Situation 1. The Wheel Bounces	166
8.19.2	Situation 2. The Wheel Remains in Contact with the Plane	166

8.20	Collisions of Two Solids. The General Situation	167
8.20.1	Collision of Two Smooth Solids	167
8.20.2	Collision of Solids at Irregular Points	173
8.20.3	Collisions of Two Solids on a Line	177
8.20.4	Collision of Two Solids. The General Situation	179
8.21	Collision of Three Balls	179
9.	Evolution of Two Deformable Solids with Collisions	185
9.1	The Principle of Virtual Work	185
9.2	The Energy Balance	189
9.3	The Second Law of Thermodynamics	200
9.4	The Constitutive Laws	202
9.5	Evolution in a Collision	206
9.5.1	The Mechanical Evolution When Decoupled from the Thermal Evolution	209
9.5.2	An Example. Collision of a Bar with a Rigid Support	212
9.5.3	The Thermal Evolution When the Mechanical Equations Are Decoupled from the Thermal Equations	213
9.5.4	The Variation of the Temperature in a Collision	217
10.	Material with Volume Interactions at a Distance.	
	Fibre Reinforced Material	219
10.1	Power of the Interior Forces to a Subdomain	219
10.2	Power of the Exterior Forces to a Subdomain	222
10.3	Power of the Acceleration Forces to a Subdomain	222
10.4	The Equations of Motion	222
10.5	The Energy Balance	223
10.6	The Second Law of Thermodynamics	226
10.7	The Free Energy	227
10.8	The Constitutive Laws	229
10.9	An Example	232
10.9.1	The Fibres Cannot Break	233
10.9.2	The Fibres Can Break. New Interior Forces	233
10.9.3	The Fibres Can Break. The Energy Balance	235
10.9.4	The Fibres Can Break. The Second Law of Thermodynamics	238
10.9.5	The Fibres Can Break. Constitutive Laws	238
10.9.6	New Interior Forces and More Sophisticated Theories	240
10.9.7	The Fibres Can Break. The Equations of Motion	242
10.9.8	A Numerical Example	245

11. Solid-Liquid Phase Change. Supercooling. Soil Freezing . . .	249
11.1 Supercooling	249
11.1.1 Introduction	249
11.1.2 The State Quantities	251
11.1.3 The Water Mass Balance	251
11.1.4 The Seed Mass Balance	252
11.1.5 The Free Energies	252
11.1.6 The Energy Balance	254
11.1.7 The Second Law of Thermodynamics	254
11.1.8 The Constitutive Laws	254
11.1.9 Ice	259
11.1.10 Supercooled Water	260
11.1.11 Solidification of Supercooled Water	261
11.1.12 Superheated Ice?	262
11.1.13 Motion of the Freezing Line	262
11.1.14 Ice Cannot Melt at a Strictly Negative Temperature.	264
11.1.15 Supercooled Water in the Presence of Seeds	265
11.1.16 Instantaneous Volume Phase Change	265
11.1.17 The Predictive Theory	269
11.1.18 Disappearance of Supercooling. Variational Formulation	270
11.2 The Classical Water-ice Phase Change: Stefan Problem	273
11.2.1 The Free Energies	273
11.2.2 The Constitutive Laws in a Domain Where the Evolution Is Smooth	274
11.2.3 The Constitutive Laws on a Freezing Line	275
11.2.4 Absence of Constitutive Law in a Domain Where There Is an Instantaneous Volume Phase Change	275
11.2.5 The Equations of the Classical Stefan Problem	276
11.2.6 The Freezing Index	276
11.2.7 The Equations Satisfied by the Freezing Index	277
11.2.8 Variational Formulation and an Existence Theorem	278
11.3 The Water-Ice Phase Change in a Porous Medium	280
11.3.1 The Constitutive Laws for the Thermal Predictive Theory	281
11.3.2 Unfrozen Water Content in a Frozen Soil	287
11.4 Soil Freezing	288
11.4.1 Unfrozen Water Content in a Frozen Soil	296
11.4.2 The Porosity of a Freezing Soil	296
11.4.3 An Example. The Small Perturbation Theory. Cryogenic Suction	298
11.4.4 Soil Freezing. A Predictive Theory	302

11.5	The Water-Ice Phase Change in the Presence of Solutes	308
11.6	Dissipative Phase Change. Irreversible Phase Change	308
12.	Damage. Gradient of Damage	313
12.1	Introduction	313
12.2	The Principle of Virtual Power. Equations of Motion	314
12.3	The Balance Laws and Constitutive Laws	316
12.4	A Model with One Damage Quantity	319
12.5	A Model with Two Damage Quantities. The Unilateral Phenomenon	321
12.6	Damage of Structures	325
12.6.1	First Example	326
12.6.2	Second Example	328
12.7	Fatigue and Damage	329
12.8	The Structural Size Effect	334
12.8.1	Introduction	334
12.8.2	The Equations	336
12.8.3	A Numerical Example	337
12.8.4	Analysis of the Structural Size Effect	340
12.8.5	The Size Effect. An Example	345
12.9	A Nonlocal Theory	347
12.9.1	The Equations of Motion	347
12.9.2	The Energy Balance Equations	348
12.9.3	The Second Law of Thermodynamics	349
12.9.4	The Free Energy	349
12.9.5	The Constitutive Laws	350
12.9.6	An Example	353
12.10	Damage Sources	355
13.	Shape Memory Alloys	359
13.1	Introduction	359
13.2	The State Quantities	359
13.3	The Principle of Virtual Power and the Equations of Motion	360
13.4	The Energy Balance	361
13.5	The Second Law of Thermodynamics	362
13.6	The Free Energy	362
13.7	The Constitutive Laws	365
13.8	The Nondissipative Constitutive Laws	367
13.9	Transformation of the Equations. Elimination of β_3	368
13.10	The First Nondissipative Model	371
13.11	The Second Nondissipative Model	372
13.12	An Example of Nondissipative Evolution	372
13.12.1	Low Temperature Behaviour ($T < T_0$)	373
13.12.2	Medium Temperature Behaviour ($T_0 < T < T_c$)	374

13.12.3	Latent Heat of Austenite–Martensite Phase Change .	376
13.12.4	High Temperature Behaviour ($T > T_c$)	377
13.13	The Dissipation. The Pseudo-potential of Dissipation	377
13.14	The Dissipative Constitutive Laws	378
13.15	Dissipative Behaviour	379
13.15.1	Equilibrium at Low Temperature ($T < T_0$)	379
13.15.2	Equilibrium at Medium Temperature ($T_0 < T < T_c$) .	381
13.15.3	Equilibrium at High Temperature ($T > T_c$)	381
13.16	Evolution of a Shape Memory Alloy	383
13.16.1	First Experiment at Low Temperature ($T < T_0$) . . .	384
13.16.2	Second Experiment at Low Temperature ($T < T_0$) . .	385
13.16.3	Third Experiment at High Temperature ($T > T_c$) . .	387
13.17	The One-Shape Memory Effect	388
13.18	The Two-Shape Memory Effect	388
13.18.1	Equilibrium States at Low Temperature ($T < T_0$) . .	389
13.18.2	Equilibrium States at Medium Temperature ($T_0 < T < T_c$)	391
13.18.3	Equilibrium States at High Temperature ($T > T_c$) . .	391
13.18.4	Constitutive Laws of a Nondissipative, Educated, Shape Memory Alloy	392
13.18.5	The Two Shape Memory Effect	393
13.19	Smooth Constitutive Laws	394
13.20	Evolutions of Structures Made of Shape Memory Alloys	395
13.21	Conclusion	400
14.	Unilateral Contact. Contact with Adhesion	401
14.1	Introduction	401
14.2	The Principle of Virtual Power. The Equations of Motion . .	402
14.3	The Energy Balance	407
14.4	The Second Law of Thermodynamics and Constitutive Laws .	418
14.5	An Example	431
14.6	The Small Perturbation Theory. The Nonlocal Forces Depending on the Elongation	434
14.6.1	A Local Force as a Limit of Nonlocal Interactions . .	436
14.6.2	The Small Perturbation Theory. The Local Forces Depending on the Distances	438
14.6.3	A Local Theory Example. The Adhesion of Two Solids	443
14.6.4	The Limit Case	445
14.7	Other Nonlocal Effects	446
14.7.1	Nonlocal Dissipative Forces	448
14.7.2	Nonlocal Nondissipative Forces	450
14.8	Some Practical Results	451
14.8.1	Separation of Two Glued Solids	451
14.8.2	Peeling of Solids	452

14.8.3	Plates Delamination.....	453
14.9	Conclusion	454
Appendix		455
A.1	Convex Functions	455
A.1.1	Subgradient of a Convex Function. Subdifferential Set	455
A.1.2	Indicator Function of a Set.....	457
A.1.3	Indicator Function of the Set of the Positive Number R^+	457
A.1.4	Indicator Function of the Set of the Negative Numbers R^-	458
A.1.5	Indicator Function of the Segment $[0, 1]$	458
A.1.6	Indicator Function of the Origin of R	458
A.1.7	Indicator Function of a Triangle	458
A.1.8	The Indicator Function of a Segment in R^2	459
A.1.9	A Property of the Subdifferential Set	460
A.1.10	The Dual Function of a Convex Function	461
A.2	Material Derivatives	462
A.2.1	Material Derivative of a Function	462
A.2.2	Material Derivative of a Surface Integral	462
A.2.3	Material Derivative of a Double Surface Integral	462
A.2.4	Mass Balance on a Surface	463
A.2.5	Material Derivatives of Integrals of Mass Densities ..	464
