

Contents

1	Scattering as a Boundary Value Problem	1
1.1	Introduction	1
1.2	Formulation of the Boundary Value Problems	5
1.3	Solving the Boundary Value Problems with the Rayleigh Method	8
1.3.1	The Outer Dirichlet Problem	10
1.3.2	The Outer Transmission Problem	12
2	Filling the Mathematical Tool Box	17
2.1	Introduction	17
2.2	Approximation of Functions and Fields at the Scatterer Surface	18
2.2.1	Approximation by Finite Series Expansions	19
2.2.2	Best Approximation	21
2.2.3	The Transformation Character of the T-Matrix	24
2.3	Eigensolutions of the Scalar Helmholtz Equation in Spherical Coordinates	29
2.3.1	The Eigensolutions	30
2.3.2	The Combined Summation Index	36
2.3.3	Properties of the Scalar Eigensolutions	36
2.3.4	Expansion of a Scalar Plane Wave	38
2.4	Eigensolutions of the Vector-Wave Equation in Spherical Coordinates	41
2.4.1	The Vectorial Eigensolutions	41
2.4.2	Properties of the Vectorial Eigensolutions	46
2.4.3	Expansion of a Linearly Polarized Plane Wave	51
2.5	Green Theorems and Green Functions Related to the Scalar Boundary Value Problems	57
2.5.1	The Green Theorems	58
2.5.2	The Free-Space Green Function	59

2.5.3	The Green Functions Related to the Outer Dirichlet and Transmission Problem.....	65
2.6	Green Theorems and Green Functions Related to the Vectorial Boundary Value Problems.....	67
2.6.1	Dyadics	67
2.6.2	The Green Theorems	70
2.6.3	The Dyadic Free-Space Green Function	71
2.6.4	The Dyadic Green Functions Related to the Outer Dirichlet and Transmission Problem	74
3	First Approach to the Green Functions:	
	The Rayleigh Method	77
3.1	Introduction	77
3.2	The Scalar Delta Distribution at the Scatterer Surface	79
3.3	The Scalar Green Functions Related to the Helmholtz Equation	79
3.3.1	The Outer Dirichlet Problem	79
3.3.2	The Outer Transmission Problem.....	87
3.4	The Dyadic Delta Distribution at the Scatterer Surface.....	89
3.5	The Dyadic Green Functions Related to the Vector-Wave Equation	91
3.5.1	The Outer Dirichlet Problem	91
3.5.2	The Outer Transmission Problem.....	97
4	Second Approach to the Green Functions:	
	The Self-Consistent Way.....	99
4.1	Introduction	99
4.2	The Scalar Green Functions Related to the Helmholtz Equation.....	100
4.2.1	The Outer Dirichlet Problem	100
4.2.2	The Outer Transmission Problem.....	103
4.3	The Dyadic Green Functions Related to the Vector-Wave Equation	105
4.3.1	The Outer Dirichlet Problem	105
4.3.2	The Outer Transmission Problem.....	107
4.4	Symmetry and Unitarity	109
4.4.1	Symmetry	110
4.4.2	Unitarity	113
5	Other Solution Methods	123
5.1	Introduction	123
5.2	T-Matrix Methods.....	124
5.2.1	The Extended Boundary Condition Method	124
5.2.2	Point Matching Methods	130

5.3	The Method of Lines as a Special Finite-Difference Method . . .	131
5.3.1	Discretization of the Scalar Helmholtz Equation and its Solution	132
5.3.2	The Limiting Behavior of the Method of Lines	141
5.4	Integral Equation Methods	146
5.4.1	Boundary Integral Equation Method Related to the Outer Dirichlet Problem	147
5.4.2	Boundary Integral Equation Method Related to the Outer Transmission Problem	152
5.4.3	Volume Integral Equation Method Related to the Outer Transmission Problem	154
5.5	Lippmann-Schwinger Equations	158
5.5.1	The Scalar Problem	158
5.5.2	The Dyadic Problem	160
6	The Rayleigh Hypothesis	165
6.1	Introduction	165
6.2	Plane Wave Scattering on Periodic Gratings	168
6.2.1	Conventional Formulation of the Scattering Problem . . .	168
6.2.2	Formulation in Terms of Green Functions	171
6.2.3	T-Matrix Solution	176
6.2.4	Rayleigh's Hypothesis According to Petit, Cadilhac, and Millar	179
6.2.5	Rayleigh's Hypothesis According to Lippmann, and a Corresponding Boundary Integral Solution	182
6.3	Numerical Near-Field Analysis	185
6.4	Summary	189
7	Physical Basics of Electromagnetic Wave Scattering	197
7.1	Introduction	197
7.2	The Electromagnetic Scattering Problems	198
7.2.1	Maxwell's Equations and Boundary Conditions	198
7.2.2	Vector Wave Equations of the Electromagnetic Fields . .	203
7.2.3	Helmholtz Equation of the Debye Potentials and Mie Theory	208
7.3	The Far-Field and the Scattering Quantities	215
7.3.1	The Far-Field	216
7.3.2	Definition of Scattering Quantities	224
7.4	Scalability of the Scattering Problem	231
8	Numerical Simulations of Scattering Experiments	235
8.1	Introduction	235
8.2	Numerical Simulations with <i>mieschka</i>	236
8.2.1	Single Particles in Fixed Orientations	236
8.2.2	Single Particles in Random Orientation	250

8.2.3	Database for Spheroidal Particles and Size Averaging	262
8.3	Description of Program <i>mieschka</i>	265
8.3.1	Convergence Strategy Used in <i>mieschka</i>	266
8.3.2	Functionality and Usage of <i>mieschka</i>	270
8.3.3	Content of the CD	276
9	Recommended Literature	277
9.1	Mie Theory	277
9.2	Mathematical Aspects of Scattering	278
9.3	Green Functions	280
9.4	T-Matrix Methods	281
9.5	Method of Lines	282
9.6	Integral Equation Methods and Singularities	282
9.7	Rayleigh's Hypothesis	283
9.8	Electromagnetic Wave Theory	285
9.9	Scattering of Electromagnetic Waves and Applications	285
9.10	Miscellaneous	287
Index		289
