Preface — VII

1 Entering the Quantum World — 1

- 1.1 Energy quantization — 1
- 1.2 Wave-particle duality and the de Broglie wavelength — 2
- 1.3 Quantum states and their wavefunctions — 4
 - 1.3.1 Describing a quantum state: wavefunction — 4
 - 1.3.2 Types of wavefunctions and Dirac notation — 5
 - 1.3.3 How does a wavefunction describe wave-particle duality? — 6
- 1.4 Properties of a wavefunction — 6
 - 1.4.1 Probability density and the normalization of a wavefunction — 6
 - 1.4.2 Comparison between Born statistics and Maxwell-Boltzmann statistics — 7
 - 1.4.3 Hilbert space and the superposition principle of wavefunctions — 9
- 1.5 Operators of observables and measurements — 13
 - 1.5.1 Expectation values of an operator — 13
 - 1.5.2 Hermitian operators — 13
 - 1.5.3 Measurements — 17
- 1.6 Measuring Planck's constant using LEDs — 18
- 1.7 Problems — 19

2 Schrödinger equation: from bound and unbound states to quantum tunneling — 22

- 2.1 Time-dependent Schrödinger equation — 22
 - 2.1.1 Time symmetry and the derivation of time-dependent Schrödinger equation — 22
 - 2.1.2 Current density and continuity equation — 24
- 2.2 Time-independent Schrödinger equation and eigenstates — 27
 - 2.2.1 Separation of time and space variables and properties of eigenstates — 28
 - 2.2.2 Stationary state evolution — 29
- 2.3 Particle in a box: bound states — 31
 - 2.3.1 Classical treatment — 31
 - 2.3.2 Potential sets boundary conditions for wavefunctions — 32
 - 2.3.3 Finding a solution that matches the boundary conditions — 33
 - 2.3.4 Eigenenergies and eigenstates — 33
 - 2.3.5 Time-dependent state evolution: stationary-state evolution — 37
- 2.4 The finite square well: bound and unbound states — 40
 - 2.4.1 Finding boundary conditions for wavefunctions — 41
 - 2.4.2 Wavefunctions in three regions — 42
- 2.5 Eigenenergies and eigenstates in the finite quantum well — 43
 - 2.5.1 Eigenenergies and boundary conditions — 43

2.5.2	Eigenstates and physical meanings —	45
2.5.3	$E > V_0$ and unbound states —	48
2.6	Tunneling through a barrier: unbound states —	48
2.6.1	Boundary conditions —	49
2.6.2	Wavefunctions —	50
2.6.3	Imposing boundary conditions and transmission and reflection —	51
2.7	Physical insights into quantum tunneling —	52
2.7.1	Wavefunctions of continuous states and transmission —	52
2.7.2	Quantum tunneling —	54
2.7.3	Current —	55
2.8	Problems —	56
3	Harmonic oscillator and blackbody radiation —	58
3.1	Operators and Heisenberg's uncertainty principle —	58
3.1.1	Basic properties of operators —	58
3.1.2	Heisenberg uncertainty principle —	60
3.1.3	Ladder operators —	62
3.2	Harmonic oscillator —	64
3.2.1	Classical physics —	64
3.2.2	Quantum theory for a harmonic oscillator —	65
3.2.3	Eigenvalues and eigenfunctions —	66
3.3	Applications of ladder operators in position and momentum —	70
3.3.1	Basic properties of $\hat{a}$ and $\hat{a}^\dagger$ —	70
3.3.2	Expectation values of $\hat{x}$ and $\hat{x}^2$ —	71
3.3.3	Expectation values of $\hat{p}_x$ and $\hat{p}_x^2$ and the uncertainty principle —	72
3.4	Time evolution in harmonic oscillator: Schrödinger picture —	73
3.4.1	Stationary solutions —	73
3.4.2	Examples —	74
3.5	Heisenberg's picture and Heisenberg equation of motion —	77
3.5.1	Heisenberg equation of motion —	77
3.5.2	Examples —	80
3.6	Blackbody radiation —	81
3.6.1	Failure of classical physics —	82
3.6.2	Quantum theory: importance of quantization —	84
3.6.3	Insights —	86
3.7	Photoelectric effects —	86
3.7.1	Experiment —	87
3.7.2	Einstein's theory of the photoelectric effect —	88
3.8	Problems —	90
4	Orbital angular momentum and hydrogen atom —	93
4.1	Bohr model for the hydrogen atom: a bridge from CM to QM —	93

4.1.1	Energy — 94
4.1.2	Spatial quantization of angular momentum — 95
4.1.3	Bohr radius — 95
4.1.4	Velocity and period — 96
4.1.5	Eigenenergies and their connections to the spectral lines — 96
4.2	Commutable operators and their common eigenfunctions — 98
4.2.1	Nondegenerate eigenfunctions — 98
4.2.2	Degenerate eigenfunctions — 99
4.3	Orbital angular momentum — 100
4.3.1	Orbital angular momentum operators: $\hat{L}$, $\hat{L}^2$, $\hat{L}_z$, $\hat{L}_+$, and $\hat{L}_-$ — 100
4.3.2	Eigenfunctions of $\hat{L}^2$ are spherical harmonics Y_{lm} — 102
4.3.3	Eigenfunction of $\hat{L}_z$ — 103
4.3.4	Using the angular momentum ladder operators to find Y_{lm} — 104
4.4	Understanding orbital angular momentum — 108
4.4.1	Physical meanings: magnitude of a quantum vector — 108
4.4.2	Matrix representations and representation theory — 110
4.4.3	Chemical meanings: atomic orbitals — 112
4.5	Central field potentials: symmetry and conservation law — 115
4.5.1	Symmetry and conservation — 115
4.5.2	Rotation of coordinates — 115
4.5.3	Rotation of a wavefunction in the function space — 116
4.5.4	Rotation of an operator — 116
4.5.5	Conservation of angular momentum — 117
4.6	Hydrogen atom — 118
4.6.1	Spherical symmetry — 118
4.6.2	Separation of variables and the radial Schrödinger equation — 119
4.7	Numerical solution of the hydrogen atom: hydrogen code — 121
4.7.1	Atomic units — 121
4.7.2	Discretization of the eigenequation — 122
4.7.3	Hamiltonian matrix and its eigenstates on the grid mesh — 123
4.7.4	Hydrogen-like ions: ionic radii and Alzheimer's disease — 125
4.8	Franck–Hertz experiment — 126
4.8.1	Experiment — 127
4.8.2	Verification of quantum theory — 128
4.9	Problems — 130
5	Time-independent approximate methods — 133
5.1	Nondegenerate perturbation theory — 133
5.1.1	Expanding the energy and wavefunction — 133
5.1.2	Zeroth-order perturbation — 134
5.1.3	First-order perturbation — 134
5.1.4	Second-order correction — 136

5.2	Examples of nondegenerate perturbation theory —	137
5.2.1	Charged harmonic oscillator in a weak electric field $\mathbf{F}$ —	137
5.2.2	van der Waals force —	139
5.3	Degenerate and nearly-degenerate perturbation theory —	142
5.3.1	Expanding the wavefunction and energy —	143
5.3.2	Zeroth-order correction —	144
5.3.3	First-order correction —	144
5.4	Examples of degenerate perturbation theory —	146
5.4.1	A simplified approach to the H_2^+ molecule —	146
5.4.2	Stark effect in hydrogen atom —	147
5.5	Variational principle —	150
5.5.1	Functional derivatives —	150
5.5.2	Spatial scaling as a variational parameter: the virial theorem —	152
5.6	Examples of the variational principle in the H_2^+ molecule —	153
5.6.1	First variation —	153
5.6.2	Second variation —	155
5.6.3	Variational minimization of the molecular energy —	159
5.6.4	Molecular orbitals —	160
5.7	Problems —	162
6	Electron spin —	165
6.1	Discovery of electron spin and representation of spin states —	165
6.1.1	Stern–Gerlach experiment: spin is another degree of freedom —	165
6.1.2	Pauli matrices —	166
6.1.3	Spin matrices —	169
6.1.4	Total wavefunction of an electron —	172
6.2	Total angular momentum $\hat{\mathbf{J}}$ —	172
6.2.1	Quantum number addition and spectroscopic notation —	172
6.2.2	Spin-orbit coupling in a central field —	174
6.2.3	Eigenfunctions and eigenvalues of $\hat{\mathbf{J}}$ and $\hat{J}_z$ —	175
6.3	Interaction of spin and orbital moments with a magnetic field —	177
6.3.1	Magnetic orbital and spin moments —	177
6.3.2	Interaction with the $\mathbf{B}$ field —	179
6.3.3	Derivation of Lande- g factor —	180
6.4	Explanation of Stern–Gerlach experiment and measurement —	181
6.4.1	Schrödinger picture —	183
6.4.2	Heisenberg picture —	183
6.4.3	Quantum measurement —	184
6.5	Zeeman effect —	187
6.5.1	Experiment —	187
6.5.2	Theory and Hund's rules —	189
6.6	Electron spin resonance (ESR) —	194

6.6.1	Rotating wave approximation and Rabi Hamiltonian —	195
6.6.2	Rabi model —	196
6.6.3	Rabi frequency —	197
6.7	Medical applications: magnetic resonance imaging —	198
6.7.1	Interaction between a nuclear spin and magnetic field —	198
6.7.2	Spatial resolution —	200
6.8	Problems —	201

7 Time-dependent perturbation theory: application to optics — 204

7.1	Interaction between radiation and matter and its selection rules —	204
7.1.1	Quantization of interaction —	205
7.1.2	Coulomb gauge and dipole approximation —	206
7.1.3	Dipole selection rules —	207
7.2	Time-dependent perturbation theory —	209
7.2.1	Zeroth order —	210
7.2.2	First order —	211
7.3	Examples of time-dependent perturbation theory —	212
7.3.1	$\hat{H}_I(t)$ is time independent —	212
7.3.2	$\hat{H}_I(t)$ is a periodic perturbation —	213
7.3.3	Excitation of a charged harmonic oscillator by a pulse —	215
7.4	Linear optics: polarization and susceptibility —	216
7.4.1	Classical optics —	216
7.4.2	Quantum optics —	217
7.4.3	Linear susceptibility: specialized to state $ k\rangle$ —	218
7.4.4	Experimental connection: penetration depth and Beer–Lambert law —	220
7.5	Laser —	222
7.5.1	Absorption and emission —	222
7.5.2	Population inversion and stimulated emission —	223
7.6	Problems —	225

8 Electrons in molecules and one-dimensional solids — 228

8.1	Molecular orbitals —	228
8.1.1	σ -orbitals —	229
8.1.2	π -orbitals —	230
8.1.3	Orbital hybridization and linear combination of atomic orbitals —	230
8.2	Molecular Hamiltonian, overlap and hopping integrals —	232
8.3	Application to small molecules: the allyl radical —	234
8.3.1	Occupying the molecular orbitals and many-body wavefunctions —	235
8.3.2	Charge density —	236
8.3.3	Dirac notation —	238
8.4	Applications to conjugated polymers: polyacetylene —	239
8.5	One-dimensional solid: Kronig–Penney model —	241

8.5.1	Region 1: $-b < x < 0$ —	242
8.5.2	Region 2: $0 < x < a$ —	242
8.5.3	Bloch theorem —	242
8.5.4	Region 3: $a < x \leq a + b$ —	243
8.5.5	Derivation of the secular equation —	243
8.5.6	Band structure —	245
8.6	Problems —	248
9	Electrons in crystalline solids —	250
9.1	Crystal structure —	250
9.1.1	Unit cell and primitive cell —	250
9.1.2	Basis and lattice points —	251
9.1.3	Primitive lattice vectors and lattice vectors —	252
9.1.4	Bravais lattice and lattice constant —	252
9.2	Translational symmetry and Bloch theorem —	252
9.2.1	Bloch theorem, Born–von Karman boundary condition and Bloch waves —	252
9.2.2	Reciprocal lattice vectors and Brillouin zones —	255
9.3	Nearly free-electron model —	256
9.3.1	Nondegenerate perturbation treatment —	257
9.3.2	Degenerate perturbation and energy band gap —	262
9.4	Tight-binding model —	265
9.4.1	Three-dimensional systems —	265
9.4.2	One-dimensional ring —	270
9.5	Occupying the energy band: Fermi surface and Fermi velocity —	272
9.5.1	Fermi energy in metals, semiconductors and insulators —	272
9.5.2	Fermi surface —	274
9.5.3	Chemical potential —	276
9.6	Transport on a nanometer scale —	277
9.6.1	Minimum conductance and von Klitzing resistance constant —	278
9.6.2	Landauer theory: conductance is transmission —	280
9.6.3	Device's density of states (DOS) —	283
9.7	Scanning tunneling microscope —	286
9.7.1	Principle of the STM —	286
9.7.2	How STM gains atomic resolution and the Binnig–Rohrer factor —	287
9.8	Lattice vibrations —	288
9.8.1	Normal modes —	288
9.8.2	Phonons —	292
9.9	Problems —	293

10	Special topics: many-body systems, magnetism, and quantum information — 295
10.1	Many-body systems under various approximations — 295
10.1.1	Born–Oppenheimer approximation — 295
10.1.2	Independent electron approximation — 296
10.1.3	Hartree–Fock approximation and density functional theory — 297
10.2	Particle indistinguishability in many-body systems — 298
10.2.1	Identical particles and entanglement — 298
10.2.2	Bosons — 300
10.2.3	Fermions and the Pauli exclusion principle — 300
10.3	Spin singlet and triplet and spatial entanglement — 302
10.3.1	Singlet and triplet — 302
10.3.2	Entanglement between spin and spatial spaces — 303
10.4	Kinetic, Coulomb and exchange correlation energies — 305
10.4.1	Single-particle operators: kinetic energy — 305
10.4.2	Coulomb and exchange correlation energies — 307
10.5	Origin of magnetism and the Heisenberg model — 309
10.6	Quantum information technology — 311
10.6.1	Quantum bits or qubits — 312
10.6.2	Single qubit and gates — 313
10.6.3	More than one qubit and entanglement — 315
10.6.4	Hardware and quantum bits — 317
10.7	Berry phase — 320
10.7.1	Dynamical phase factor with time-independent Hamiltonian — 320
10.7.2	Time-dependent Hamiltonian and transition between states — 321
10.7.3	Adiabatic approximation — 321
10.7.4	Geometric phase factor: a conceptual change — 323
10.7.5	Berry phase — 326
10.8	Problems — 329
11	Appendix — 332
11.1	Atomic units — 332
11.2	Time-order operator — 332
11.3	Spin rotation — 333
11.3.1	Polar vectors — 333
11.3.2	Axial vectors: spin rotation and $SU(2)$ rotation matrices — 334
11.3.3	$O(3)$ rotation matrices — 335
11.3.4	What about spin eigenfunctions? — 336
11.4	Spin matrices for photon and useful math formulas — 336
11.5	Computer codes — 339

Bibliography — 361

Index — 365
