Preface	i
1 Introduction	1
1.1 Transmitting boundaries	1
1.2 Frequency-domain solutions	2
1.3 Time-domain solutions	2
1.3.1 Local, non-consistent boundaries	3
1.3.2 Consistent, non-local boundaries	3
1.3.3 Rational boundaries	4
1.4 Rational approximation	4
1.5 Dam-reservoir interaction	6
1.5.1 Compressibility effects	6
1.5.2 Two-dimensional solutions	8
1.5.3 Three-dimensional solutions	9
1.5.4 Experimental work	9
1.6 Objectives	10
1.7 Scope	10
1.7.1 Model and restrictions	10
1.7.2 Related problems	11
1.7.3 Presentation	12
1.8 Outline	12
2 Model Problems	15
2.1 Semi-infinite rod	15
2.2 Spherical cavity	17
2.3 Semi-infinite rod on elastic foundation	21
2.4 Semi-infinite rod on visco-elastic foundation	25
2.5 Semi-infinite channel with constant cross-section	26
3 Common Numerical Procedures	29
3.1 Local, non-consistent boundaries	30
3.1.1 Engquist-Majda boundaries	30
3.1.2 General case	33
3.1.3 Paraxial boundaries	34
3.1.4 Lindman boundary	34
3.1.5 Extrapolation algorithm	35
3.1.6 Superposition boundaries	37
3.2 Boundary elements	38
3.2.1 Frequency-domain boundary elements	40
3.2.2 Time-domain boundary elements	41

3.3	Infinite elements and mapping	43
3.3.1	Spatial discretization, finite elements	43
3.3.2	Infinite elements	47
3.4	Mixed time-frequency domain methods	49
3.4.1	Hybrid method	50
3.4.2	“Recursive” method	50
4	Scalar Systems, Signal Processing	51
4.1	Rational systems	51
4.1.1	Recursive realization	52
4.1.2	Differential equation formulation	53
4.2	Discrete-time systems	53
4.2.1	z -transform	54
4.2.2	Stability and causality of rational systems	56
4.2.3	Hankel matrix	58
4.2.4	Singular value decomposition	59
4.2.5	Discrete Fourier transform (DFT)	60
4.2.6	Sampling	60
4.2.7	Norms	62
4.3	Continuous-time systems	62
4.3.1	Laplace transform	62
4.3.2	Stability and causality of rational systems	67
4.3.3	Markov parameters	69
4.3.4	Integral Hankel operator	70
4.3.5	SVD of integral Hankel operator	71
4.3.6	Numerical Fourier transform	71
4.3.7	Norms	72
4.4	Bilinear transform	72
4.4.1	Definition of mapping	72
4.4.2	Singular values	74
4.4.3	Discrete Fourier transform	74
4.4.4	Back-transformation for rational transfer function	75
5	Approximation by Scalar Systems	77
5.1	Approximation of transfer function (frequency sampling)	77
5.1.1	Discrete-time systems	77
5.1.2	Continuous-time systems	81
5.2	Approximation of Markov parameters	82
5.2.1	Markov parameters of discrete-time system	82
5.2.2	Markov parameters of mapped discrete-time system	85
5.2.3	Potential problems	89
5.3	Singular value decomposition (SVD)	90
5.4	Methods based on SVD of Hankel matrix	92
5.4.1	Carathéodory-Fejér (CF) method	92
5.5	Additional topics	95
5.5.1	Transfer function in the complex plane	95
5.5.2	Causality and stability	97
5.5.3	General remarks	97

6	Multivariable Systems, State-Variable Description	100
6.1	Discrete-time systems	100
6.1.1	Scalar systems	100
6.1.2	Multivariable systems	102
6.1.3	Similarity transformation	104
6.1.4	Stability	105
6.1.5	Observability, controllability	105
6.1.6	Lyapunov equations	109
6.1.7	Hankel matrix	110
6.1.8	Balanced systems	111
6.1.9	Norms	113
6.2	Continuous-time systems	113
6.2.1	Multivariable systems	114
6.2.2	Observability and controllability	114
6.2.3	Lyapunov equations	115
6.2.4	Hankel integral operator	116
6.2.5	Balanced systems	117
6.2.6	Norms	118
6.3	Bilinear transform	118
6.4	Remarks	120
7	Balanced Realization	121
7.1	Algorithm	121
7.1.1	General derivation	121
7.1.2	Full rank Hankel matrix	123
7.1.3	Rank deficient Hankel matrix	124
7.1.4	Reduced systems	126
7.2	Examples	128
7.2.1	Spherical cavity	128
7.2.2	Rod on visco-elastic foundation	130
7.2.3	Two-degree-of-freedom system	131
7.3	Conclusions	137
8	Symmetric Second-Order Systems	138
8.1	Scalar systems	138
8.1.1	Symmetric systems	138
8.1.2	Realizations	139
8.1.3	Physical models	140
8.2	Multivariable systems	141
8.2.1	Vector formulation	141
8.2.2	Matrix formulation	143
8.3	Example	146
9	Fluid Model and Analytical Solutions	148
9.1	Fluid model	148
9.2	Analytical solutions for 2-D fluid problem	149
9.3	Analysis of simplified models	156
9.3.1	Upstream excitation	156
9.3.2	Vertical excitation	159
9.4	Analytical solutions for 3-D fluid problems	162

9.4.1	Rectangular channel	162
9.4.2	Semi-circular channel	164
10	Finite Element Models	170
10.1	General formulation for fluid	170
10.1.1	Weak form	170
10.1.2	Shape functions	172
10.2	Fluid element matrices	173
10.3	Solid element matrices	175
10.4	Interface element matrices	175
10.5	Infinite fluid domain	177
10.5.1	Fluid element matrices for channel cross-section	177
10.5.2	Semi-analytical solution for the whole channel	178
10.6	Coupled system	180
10.6.1	Nearfield	180
10.6.2	Appending the farfield	182
10.6.3	Ritz vectors	183
10.6.4	Right-hand-side input	184
10.6.5	Special cases	185
10.7	Frequency-domain analysis, simplified modeling	187
10.7.1	Two-dimensional fluid problem	187
10.7.2	Talvacchia dam	190
10.7.3	Morrow Point dam	195
11	Time-Domain Implementation	199
11.1	Further modifications for impedance matrix	199
11.1.1	Scaling	199
11.1.2	High-frequency behavior	200
11.2	Coupled system with approximated farfield	200
11.2.1	General case	200
11.2.2	Diagonal approximation	203
11.2.3	Special cases	203
11.3	Time Integration	204
11.4	Review of procedure	205
11.5	Examples with rigid dam	210
11.5.1	Two-dimensional fluid domain with constant depth	210
11.5.2	Three-dimensional examples	212
11.6	Examples with flexible dam	216
11.6.1	Taft earthquake records	216
11.6.2	Two-dimensional example: Pine Flat dam	217
11.6.3	Three-dimensional example: Morrow Point dam	218
12	Closure	224
12.1	Conclusions	224
12.2	Future Developments	225
12.2.1	Extensions of the method	225
12.2.2	Extensions of the general computer program	226
12.2.3	Applicability to other problems	226

A Program DANAID	228
A.1 Input processing	229
A.1.1 Format	229
A.1.2 Scanner	229
A.1.3 Parser	230
A.1.4 Geometry definition	230
A.2 Element types	231
A.3 Data structures	233
A.3.1 Nodal data	233
A.3.2 Element data	233
A.3.3 Sets	234
A.4 Memory management	235
A.5 Analysis procedure	236
A.6 Output file structure	237
A.7 Libraries	239
A.8 Status of program and further developments	239
Bibliography	241
Abstract	253
Zusammenfassung	255
Glossary	257
Notations	260
Index	263
