Preface	ix
1 Special Relativity	
1.1 Introduction	1
1.2 Lorentz transformations	1
1.3 Tensors in Minkowski spaces	8
1.4 Relativistic mechanics	14
1.4.1 Four-velocity	14
1.4.2 Minkowski force	15
1.4.3 Elastic collisions	17
1.4.4 Relative velocity	19
1.5 Electrodynamics in free space	21
1.5.1 Maxwell equations	21
1.5.2 Energy-momentum tensor	24
1.5.3 Retarded potentials	26
2 Relativistic Boltzmann Equation	
2.1 Single non-degenerate gas	31
2.2 Single degenerate gas	39
2.3 General equation of transfer	41
2.4 Summational invariants	42
2.5 Macroscopic description	45
2.6 Local Lorentz rest frame	47
2.7 Equilibrium distribution function	49
2.8 Trend to equilibrium. $\mathcal{H}$ -theorem	53
2.9 The projector $\Delta_{\alpha\beta}$	58
2.10 Equilibrium states	59
3 Fields in Equilibrium	
3.1 The general case	65
3.2 Non-degenerate gas	67
3.2.1 Modified Bessel function of second kind	67
3.2.2 Expressions for n , e and p	69
3.2.3 Non-relativistic limit	71
3.2.4 Ultra-relativistic limit	72

3.3	Degenerate relativistic Fermi gas	74
3.3.1	Completely degenerate relativistic Fermi gas	74
3.3.2	White dwarf stars	77
3.3.3	Strongly degenerate relativistic Fermi gas	84
3.4	Degenerate relativistic Bose gas	90
3.4.1	Some useful integrals	90
3.4.2	Relativistic Bose–Einstein condensation	92
4	Thermomechanics of Relativistic Fluids	
4.1	Introduction	99
4.2	Thermodynamics of perfect fluids	99
4.3	Eckart decomposition	102
4.4	Landau and Lifshitz decomposition	105
4.5	Thermodynamics of a single fluid	107
5	Chapman–Enskog Method	
5.1	Introduction	111
5.2	Simplified version	111
5.3	The integrals I_1 , I_2 and I_3	118
5.4	Transport coefficients	123
5.4.1	Hard-sphere particles	124
5.4.2	Israel particles	126
5.5	Formal version	128
5.5.1	Integral equations	128
5.5.2	Second approximation	132
5.5.3	Orthogonal polynomials	134
5.5.4	Expansion in orthogonal polynomials	139
5.6	Appendix	144
6	Method of Moments	
6.1	Introduction	149
6.2	Grad distribution function	149
6.3	Constitutive equations for $T^{\alpha\beta\gamma}$ and $P^{\alpha\beta}$	154
6.4	Linearized field equations	156
6.5	Five-field theory	157
6.5.1	Laws of Navier–Stokes and Fourier	158
6.5.2	Linearized Burnett equations	159
6.6	Maxwellian particles	163
6.7	Combined method of Chapman–Enskog and Grad	166
7	Chemically Reacting Gas Mixtures	
7.1	Introduction	171
7.2	Boltzmann and transfer equations	171
7.3	Maxwell–Jüttner distribution function	175
7.4	Thermodynamics of mixtures	177

7.5	Transport coefficients	180
7.6	Onsager reciprocity relations	187
8	Model Equations	
8.1	Introduction	191
8.2	The characteristic time	194
8.3	Single non-degenerate gas	197
8.3.1	The model of Marle	197
8.3.2	The model of Anderson and Witting	201
8.3.3	Comparison of the models	205
8.4	Single degenerate gas	208
8.4.1	Non-zero rest mass	208
8.4.2	Zero rest mass	215
8.5	Relativistic ionized gases	218
8.5.1	Boltzmann and balance equations	218
8.5.2	Decomposition with respect to the four-velocity	220
8.5.3	Ohm's law	222
8.6	Appendix	229
9	Wave Phenomena in a Relativistic Gas	
9.1	Introduction	233
9.2	Propagation of discontinuities	234
9.3	Small oscillations	238
9.3.1	Boltzmann equation	238
9.3.2	Continuum-like theories	245
9.4	Shock waves	259
9.4.1	Continuum theory	259
9.4.2	Boltzmann equation	263
10	Tensor Calculus in General Coordinates	
10.1	Introduction	271
10.2	Tensor components in general coordinates	271
10.3	Affine connection	277
10.4	Covariant differentiation	280
10.5	Spatial metric tensor	285
10.6	Special relativity in general coordinates	287
11	Riemann Spaces and General Relativity	
11.1	Introduction	291
11.2	Tensors in Riemannian spaces	291
11.3	Curvature tensor	292
11.4	Physical principles of general relativity	298
11.5	Mechanics in gravitational fields	299
11.5.1	Four-velocity	299
11.5.2	Equations of motion	300
11.6	Electrodynamics in gravitational fields	302

11.7	Perfect fluids	304
11.8	Einstein's field equations	307
11.9	Solution for weak fields	310
11.10	Exact solutions of Einstein's field equations	312
11.11	Robertson–Walker metric	317
11.11.1	Geometrical meaning	318
11.11.2	Determination of the energy density	320
11.11.3	Determination of $\kappa(t)$	322
12	Boltzmann Equation in Gravitational Fields	
12.1	Introduction	327
12.2	Transformation of volume elements	327
12.3	Boltzmann equation	330
12.4	Transfer equation	332
12.5	Equilibrium states	334
12.6	Boltzmann equation in a spherically symmetric gravitational field	339
12.7	Dynamic pressure in a homogeneous and isotropic universe	342
13	The Vlasov Equation and Related Systems	
13.1	Introduction	347
13.2	The Vlasov–Maxwell system	349
13.3	The Vlasov–Einstein system	350
13.4	Steady Vlasov–Einstein system in case of spherical symmetry	351
13.5	The threshold of black hole formation	357
13.6	Cosmology with the Vlasov–Einstein system	363
	Physical Constants	371
	Modified Bessel Function	373
	Index	375
