1. Steel – the material for today and tomorrow 2			Manufacture of seamless steel tube 107					
1.1	Innovations in steel	2	Manufacture of welded steel tube 108					
1.2	Fundamentals	5	Forging and pressing 109					
1.3	Various grades of steel	9	5.5	Process automation	61	Ring rolling 112		
	General classification	9		Electric steelmaking	61	Extrusion 113		
	Nomenclature systems for steels	10		The electric arc furnace	62	The cold-forming of steel 114		
	Steel names	10		The melting process	62	Cold-rolling 114		
	Steel numbers	11		Current status of the electric arc furnace process	63	Cold-drawing 117		
	Steel groups	11		Other electric steelmaking processes	66	Other methods of cold-forming steel (examples) 118		
2. Raw materials for the production of iron and steel	16	5.6		The open-hearth process	67	Steel parting techniques 119		
2.1	Iron ores	16	5.7	Secondary metallurgy (post-treatment of steel)	67	Steel joining techniques 119		
	Types of iron ore	17		Basic principles	67	8.9 Coatings and barrier layers for the protection of steel against corrosion 125		
	Quality requirements and the assessment of ores	18		Post-treatment processes	69	Organic coatings 125		
	Pre-treatment of the ores	20		Vacuum treatment	70	Inorganic coatings 127		
2.2	Scrap	24		Special refining processes	72	Metallic coatings 128		
2.3	Reducing agents	24	5.8	Electroslag refining	72	Conversion coatings 132		
2.4	Fluxes	25			Outlook	74	Heat treatment of steel 134	
2.5	Refractories	26		Environmental protection/ Recycling	75	Annealing 136		
3. From ore to steel	27	6. Steel casting processes	76		Hardening 136	9. Materials testing 137		
3.1	Blast furnace – converter route	27	6.1	Continuous casting	76	9.1	Fundamental principles	137
	Coke metallurgy	27		The continuous casting process	77		Service requirements	137
	Coal metallurgy	28		Types of continuous casting plant	78		Causes of failure	137
3.2	The electric arc furnace route	28		Automation	79		Fracture mechanics	137
	DRI metallurgy	28		Near-net-shape casting	80		Factors that influence characteristic material properties	137
	Scrap metallurgy	29		Horizontal continuous casting	82		The purpose of materials testing	138
3.3	Secondary metallurgy	29	6.2	Ingot casting	82		Test methods	139
3.4	Special developments	29	6.3	Spray compaction	83		10. Quality management	144
4. Reduction of iron ores	30	7. Iron and steel castings	84		85	11. Plant management	145	
4.1	Hot metal production	30	7.1	Cast iron	84		12. The uses of steel	147
	Blast furnace plant	31		Cast iron with lamellar graphite	85		Huge range of applications	147
	Processes within the blast furnace	35		Cast iron with spheroidal graphite	85		Further development of steel grades and system solutions	148
	Products of the blast furnace	38		Malleable cast iron	86		Steel as a high-spec material	151
	Material and mass balance of the blast furnace	39	7.2	Cast steel	86		Wide range of processing properties for modern technologies	157
	Process control	39					Environmental compatibility	158
	Future prospects	40	8.	The forming of steel	88		Unmatched recyclability	158
4.2	Direct reduction processes	41	8.1	The basics of steel rolling	88		Advanced technology in iron and steelmaking	158
	Gas reduction processes	42		Deformation	88		Secure raw material supplies	159
	Coal-based reduction processes	45		Rolling	89	13.	A brief history of iron and steelmaking	170
4.3	Smelting reduction processes	48	8.2	Rolled steel products	93		Chart: From ore to steel	176
4.4	Hot metal pre-treatment	49	8.3	Rolling mill facilities	96			
				Rolling stands	96			
5.	Steelmaking	51		Rolling stand terminology	96			
5.1	Charge materials	51		Rolling-mill rolls	98			
5.2	The refining process	52		Rolling mills	98			
5.3	Current state of refining process development	53		Rolling trains	99			
5.4	Oxygen metallurgy	54		Dressing and finishing department	101			
	Refining with pure oxygen	55	8.4	Production stages in the hot-rolling of steel	102			
	The various oxygen steelmaking processes	55
