

Contents

<i>Introduction</i>	1
<i>Chapter I. Principles of Magnification Radiography.</i>	2
A. Magnification Radiography in General	2
B. Historical Review	4
C. X-Ray Tube	10
1. Focal Spot	10
2. Measurement of Focal Spot Size	12
a) Pinhole-Camera Method	12
b) Estimation with Resolving Power	13
c) Calculation with Resolving Power	14
d) Calculation with MTF Curves	15
3. Output	16
D. Specific Effects in Magnification Radiography	18
1. High Detectability	18
a) Resolution	18
b) Background Dispersion	20
2. Disappearance of Image of Very Small Object	21
a) Filter Effect Due to Penumbra.	22
b) Filter Effect Due to Scattering	23
c) Filter Effect Due to Contrast	23
3. Magnified Blur Due to Motion.	25
4. Improvement of Visibility Due to Superposition	27
5. Variability of Magnification Ratio	28
E. Image Quality	29
F. Radiation Protection of the Patient	37
1. Skin Dose.	38
2. Size of Radiation Field	39
3. Depth and Volume Dose	41
4. Body Thickness	42
5. High-Voltage Technique	43
6. Patient Dose Reduction in General	43

<i>Chapter II. Technique of Magnification Radiography in Clinical Practice</i>	47
A. Equipment for High-Magnification Radiography	47
1. Magnification Radiography Unit for General Use.	48
2. Magnification Angiography Unit	49
3. Fluoroscopy Unit Attached with Magnification Radiography Adaptor	49
B. Accessories for Magnification Radiography Unit	50
1. Filter and Cone	50
2. Grid	50
3. Intensifying Screens and Film	50
C. Positioning	51
1. Positioning Based on Anatomical Knowledge	52
2. Positioning Based on Interpretation of Previously Taken Normal Roentgenogram	52
3. Positioning by Means of X-Ray Television	52
D. Magnification Ratio	53
1. Definition of Magnification Ratio	53
a) Magnification Ratio Relative to Lesion	53
b) Magnification Ratio Relative to Skin Dose	53
2. Determination of Magnification Ratio for Non-Moving Organ	54
3. Determination of Magnification Ratio for Moving Organ	57
E. Adequate Field Size	59
F. Test Marker	60
G. Exposure Factors.	60
H. X-Ray Television Magnification Fluoroscopy.	62
 <i>Chapter III. Clinical Significance of Magnification Radiography</i>	64
A. Magnification Radiography Conducted with Small Focal-Spot Tubes	64
B. Magnification Radiography without Administration of Contrast Media	70
Case 1 (Bone): Gout	70
Case 2 (Chest): Silicosis	72
C. Magnification Radiography with Administration of Contrast Media	74
Case 3 (Abdomen): Atrophic Hyperplastic Gastritis and Gastric Ulcer	74
Case 4 (Chest): Embolism of Oily Contrast Medium in Lung	76
Case 5 (Chest): Bronchial Asthma	78
Case 6 (Chest): Chronic Obstructive Pulmonary Disease	82
Case 7 (Salivary Gland): Sjögren Syndrome	84
Case 8 (Abdomen): Mucosal Pattern of Small Intestine	86
D. Magnification Radiography of Vessels	88
Case 9 (Popliteal Fossa): Carcinoma of the Skin.	88
Case 10 (Chest): Chronic Obstructive Pulmonary Disease.	90

Case 11 (Chest): Pulmonary Carcinoma	92
Case 12 (Chest): Mediastinal Tumor	94
Case 13 (Abdomen): Carcinoma of Body and Tail of Pancreas	96
Case 14 (Abdomen): Renal Cell Carcinoma	98
