

CONTENTS

Introduction	1
1. Preliminaries	5
2. Circuit-Size Complexity	12
2.1. Circuit-Size Complexity of Boolean Functions	12
2.2. Circuit-Size Complexity of Languages	18
2.3. Generating Circuits	21
2.4. Simulation of Turing Machines by Circuits	22
2.5. P-Selective Sets	27
3. Probabilistic Algorithms	30
3.1. Monte Carlo or Las Vegas? Classifications of Probabilistic Algorithms	30
3.2. Iteration of Probabilistic Algorithms	34
3.3. Probabilistic Classes and Polynomial Size Circuits	39
4. Sparse Sets	42
4.1. Sparse Sets in NP	43
4.2. "Almost Correct" Algorithms	47
4.3. "Almost Fast" Algorithms and Complexity Cores	52
4.4. Relativization, Sparse Oracles, and Circuits	57
4.5. Self-Reducibility	60
5. The Low and High Hierarchies	64
5.1. Definitions and Elementary Results	64
5.2. Circuit-Size Complexity and the Low Hierarchy	68
5.3. Lowness of Some Special Classes	71
5.4. Lowness of BPP	73
5.5. Refinement of the Low and High Hierarchies	75
6. Oracles	81
6.1. Positive Relativizations	84
6.2. Negative Relativizations	88
6.3. Higher Levels of the Polynomial Hierarchy	90
References	93
Symbols	97
Index	98
