

TABLE OF CONTENTS

Keynote papers

Objective medical decision making with special reference to
acute abdominal pain
F.T. de Dombal 2

Expert systems
W. van Eimeren 7

Acute abdomen

Comparison of several discrimination methods. Application to
the acute abdominal pain diagnosis
B. Seroussi 12

Teaching clinical decision-making with computer-simulated
patients
H.A. Verbeek 19

Weights optimization in a rule-based expert system: An
application to the diagnosis of acute abdominal pain
J.-L. Golmard, M. Rodary 25

Experience with compiling a diagnostic database on acute
abdominal pain
B. Murphy, S.M. Lavelle, and T.O'Brien 31

Medical decision making - the patient
C. Wastell 37

Summary and conclusion of the acute abdomen session
F.T. de Dombal 43

Cardiovascular disease - myocardial infarct

Medical decision-making applied to the diagnosis of coronary
artery disease
C. Brohet, J. Melin, L. Eeckhoudt, A. Robert, R. Vanbutsele,
and J.M. Detry 48

Hypertension management: Connection of an expert system to
the ARTEMIS patient database
V. Morice, P. Degoulet, X. Jeunemaitre, A. Hemdaoui, O. Gascuel,
G. Chatellier, C. Devries, and P. Ferrand 55

From clinical experience to objective decision making in
myocardial infarction
J.L. Bachy, A. Robert, J. Col, and L. Lambotte 62

Prognostic indicators for patients with acute myocardial in-
farction complicated by pump failure undergoing intraaortic
counterpulsation
J.-P. Nakache, P. Lorente 67

Improved estimation of operative risk after heart valve replacement: Medical decision-making based on multivariate logistic regression analysis K. Holper, H. Federkiel, D. Hölzel, S. Balteskonis, and F. Sebening	76
Practical experience in provision of objective decision support for acute chest pain in primary care F.T. de Dombal, B.J. Unwin, and S. Pearson	88
Summary and conclusion of the cardiovascular session L. Lambotte	91
Jaundice	
The Torino liver project M. Milanese, G. Molino, and P. Torasso	94
A general hospital diagnostic database on jaundice S.F. O'Beirn, F.H. Given	103
Differential diagnosis of jaundice: A pocket diagnostic chart Copenhagen Computer Icterus Group	108
Statistical prediction of diagnosis: Application to hepatitis S.C. Richardson, G. Papaevangelou	114
Educational use of objective diagnostic methods S.M. Lavelle	122
Summary and conclusion of the jaundice session S.M. Lavelle	127
Diabetes	
Mathematical models of insulin, ketone bodies and glucose kinetics in diabetes: Their use for understanding and assessing metabolism and its control C. Cobelli	130
Objective medical decision-making in diabetes M. Vanhaeverbeek, T.De Geeter, M. Brasseur, and J.M. Gregoire	141
Possibilities for prediction of blood glucose and improvement of diabetes control A. Vølund, L. Sestoft	149
The glucagon/C-peptide test in the discrimination of insulin-dependent from non-insulin-dependent diabetes S. Madsbad	159
Diabeta - An expert system for the management of diabetes F.F. Harvey, E.R. Carson	166
Summary and conclusion of the diabetes session C. Cobelli	175

Generalist systems

The MEDIUC system for diagnostic support and its new gastroenterological database W. Giere	178
Idea - A consultative system A. Hasman, J.v.d.Lei, and H.Y. Kwa	184
Decision aid in the general practitioner's office: Myth or possible reality? G. Botti, M. Fieschi	193
An expert system for anemia diagnosis P. Cristiani, S. Quaglini, and M. Stefanelli	208
A computer assisted diagnostic system for dyspepsia (Gladys) R.P. Knill-Jones	215
Epilogue D.D. Tsiftsis	229
