

TABLE OF CONTENTS

CHAPTER I:	BASIC CONCEPTS; INTEGRAL REPRESENTATION.....	1
I.1.	Constitutive relations.....	1
I.2.	Basic experimental results.....	3
I.2.1.	Linearity.....	5
I.2.2.	Aging.....	7
I.3.	Integral representation of linear aging viscoelasticity..	8
I.3.1.	Alternative forms of the integral representation.....	10
I.4.	Determination of the relaxation function from the creep function.....	13
I.5.	Numerical solution of Volterra equation.....	14
I.6.	Notes and references.....	16
 CHAPTER II:	 RHEOLOGICAL MODELS; DIFFERENTIAL REPRESENTATION.....	 18
II.1.	The basic elements: spring and dashpot.....	18
II.2.	Maxwell model.....	19
II.3.	Kelvin model.....	21
II.3.1.	Numerical solution for the Kelvin model.....	22
II.4.	Generalized models.....	23
II.5.	Models with variable parameters.....	27
II.6.	Representation by means of state variables.....	31
II.7.	Identification.....	33
II.8.	A nonlinear model.....	34
II.9.	Notes and references.....	37
 CHAPTER III:	 EXAMPLES OF VISCOELASTIC BEHAVIOR.....	 38
III.1.	Tests with constant stress rate.....	38
III.2.	Tests with constant strain rate.....	40
III.3.	Tests with periodic loading.....	42
III.4.	Solids and fluids.....	46
III.4.1.	Stability.....	46
III.4.2.	Fading memory.....	47
III.5.	Reduced modulus.....	48
III.5.1.	Trost-Bažant modulus.....	50
III.6.	Notes and references.....	54

CHAPTER IV:	VISCOELASTICITY IN THREE DIMENSIONS.....	55
IV.1.	Constitutive relations.....	55
IV.2.	Correspondence method.....	57
IV.3.	Asymptotic behavior.....	61
IV.4.	Notes and references.....	63
CHAPTER V:	REPRESENTATION OF CONCRETE'S BEHAVIOR.....	64
V.1.	Concrete as a porous-adsorbent material.....	64
V.2.	Basic experimental facts and definitions.....	68
V.3.	Some basic mathematical expressions.....	71
V.4.	Prediction of creep.....	73
V.5.	Formulas for structural analysis.....	75
V.5.1.	Dischinger's formula.....	75
V.5.2.	Improved Dischinger's formula.....	78
V.5.3.	Arutyunyan's formula.....	79
V.5.4.	Exponential series.....	80
V.5.5.	Bažant-Panula formula.....	80
V.5.6.	Expressions used in the Codes.....	80
V.6.	Nonlinear behavior.....	81
V.7.	Notes and references.....	83
CHAPTER VI:	STRUCTURAL ANALYSIS.....	84
VI.1.	General method.....	84
VI.1.1.	Basic relations.....	84
VI.1.2.	Correspondence method.....	85
VI.1.3.	General results; classification of problems.....	88
VI.2.	Generalized force method.....	95
VI.3.	Approximate solutions; more examples.....	99
VI.3.1.	Effective modulus and TB-modulus.....	99
VI.3.2.	Redistribution of stresses in a concrete column.....	101
VI.3.3.	Single elastic restraint.....	109
VI.4.	Notes and references.....	110
CHAPTER VII:	FINITE ELEMENTS VISCOELASTIC ANALYSIS.....	111
VII.1.	Finite elements; basic equations.....	111
VII.2.	Constitutive relations.....	118
VII.3.	Incremental formulation for viscoelasticity problems..	121
VII.4.	A computer program for viscoelastic analysis of trusses.....	124
VII.5.	Notes and references.....	140

CHAPTER VIII:	VISCOELASTIC BUCKLING.....	141
VIII.1.	The stability concept.....	141
VIII.2.	Simplified column analysis.....	142
VIII.2.1.	Elastic analysis.....	143
VIII.2.2.	Linear viscoelastic analysis.....	145
VIII.3.	Beam-column analysis.....	146
VIII.4.	Nonlinear viscoelastic analysis.....	150
VIII.5.	Practical formulas and Codes.....	152
VIII.6.	Notes and references.....	153
APPENDIX A:	SOME MATHEMATICAL FORMULAE.....	154
APPENDIX B:	SOME ELASTICITY FORMULAE.....	156
REFERENCES.....		162
INDEX.....		166
