1	Introduction and Guide for the Reader	
	Contents and Data of Chapters 2-5	
	(A. KAUL, J.H. BERNHARDT, H.-M. KRAMER, D. NOBKE, J. VALENTIN)	1-1
1.1	Introduction	1-1
1.2	CHAPTER 2: Radiations and Biological Effects: Ionizing and Non-Ionizing Radiations	1-1
1.2.1	Ionizing Radiation: Physical Properties (SECT. 2.2.1)	1-2
1.2.2	Ionizing Radiation: Biological Effects (SECT. 2.3.1)	1-3
1.2.2.1	Deterministic Effects (SECT. 2.3.1.2)	1-3
1.2.2.2	Stochastic Effects (SECT. 2.3.1.3)	1-3
1.2.2.3	Effective Dose (SECT. 2.3.1.4)	1-4
1.2.3	Non-Ionizing Radiations: Physical Properties (SECT. 2.2.2)	1-4
1.2.3.1	Diagnostic Ultrasound (SECT. 2.2.2.2)	1-4
1.2.3.2	Static and Slowly Varying Electric and Magnetic Fields (SECT. 2.2.2.3)	1-4
1.2.3.3	Time Varying Electric and Magnetic Fields of Frequencies Less Than 100 kHz and Above (SECTS. 2.2.2.4 and 2.2.2.5)	1-5
1.2.3.4	Optical Radiations Including Lasers (SECT. 2.2.2.6)	1-5
1.2.4	Non-Ionizing Radiations: Biological Effects (SECT. 2.3.2)	1-5
1.2.4.1	Diagnostic Ultrasound (SECT. 2.3.2.2)	1-5
1.2.4.2	Static and Slowly Varying Electric and Magnetic Fields (SECT. 2.3.2.3)	1-6
1.2.4.3	Time Varying Electric and Magnetic Fields of Frequencies Less Than 100 kHz (SECT. 2.3.2.4)	1-6
1.2.4.4	Electromagnetic Fields of Frequencies Above 100 kHz (SECT. 2.3.2.5)	1-6
1.2.4.5	Optical Radiation and Lasers (SECT. 2.3.2.6)	1-7
1.3	CHAPTER 3: Dosimetry in Diagnostic Radiology and Radiotherapy	1-7
1.3.1	Diagnostic Radiology	1-7
1.3.2	Radiation Therapy	1-8
1.3.3	Dose Measurement in Diagnostic Radiology and Radiation Therapy (SECTS. 3.3 and 3.4)	1-8
1.3.3.1	Dosimetric Quantities in Diagnostic Radiology (SECT. 3.3.2)	1-8
1.3.3.3	Dosimetric Equipment for Diagnostic Radiology (SECT. 3.3.4)	1-9
1.3.3.4	Dose Measurements in Diagnostic Radiology (SECT. 3.3.5)	1-9
1.3.3.5	Dosimetric Quantity and Equipment for Measurement in Radiotherapy (SECT. 3.4.3)	1-9
1.3.3.6	Dosimetry for Teletherapy (SECT. 3.4.4)	1-10
1.3.3.6.1	Photons and Electrons (SECT. 3.4.4.1)	1-10
1.3.3.6.2	Non-Reference Conditions (SECT. 3.4.4.2)	1-10
1.3.3.6.3	Protons and Heavier Ions (SECT. 3.4.4.4)	1-10
1.3.3.6.4	Uncertainties (SECT. 3.4.4.5)	1-11
1.3.3.7	Dosimetry for Brachytherapy (SECT. 3.4.5)	1-11

1.4	CHAPTER 4: Dosimetry in Nuclear Medicine Diagnosis and Therapy	1-12
1.4.1	Dosimetric and Biokinetic Models (SECT. 4.2)	1-12
1.4.2	Biokinetic Data and Physical Properties of Radionuclides (SECTS. 4.3 and 4.4)	1-13
1.4.3	Dose Coefficients and Diagnostic Reference Activities (SECT. 4.5)	1-14
1.4.4	Dosimetry in Nuclear Medical Therapy (SECT. 4.6)	1-14
1.4.5	Necessity of Patient-Specific Dose Planning in Radionuclide Therapy (SECT. 4.7)	1-15
1.4.6	Dose to the Embryo and Fetus During Pregnancy (SECT. 4.8)	1-15
1.4.7	Doses to Infants From Breastfeeding (SECT. 4.9)	1-15
1.5	CHAPTER 5: Medical Radiological Protection	1-16
1.5.1	The Concept of Medical Radiological Protection (SECT. 5.2)	1-16
1.5.2	The System of Applied Medical Radiological Protection (SECT. 5.3)	1-17
1.5.3	Medical Radiological Protection in Magnetic Resonance Imaging and Diagnostic Ultrasound (SECT. 5.4)	1-17
1.6	Glossary and Index of Terms	1-17
2	Radiation and Biological Effects	
	(J.H. BERNHARDT, K.-U. KASCH, A. KAUL)	2-1
2.1	Introduction (J.H. BERNHARDT, K.-U. KASCH, A. KAUL)	2-1
2.2	Kinds of Radiation	2-3
2.2.1	Ionizing Radiation (K.-U. KASCH)	2-3
2.2.1.1	Photons	2-3
2.2.1.1.1	Coherent scattering	2-4
2.2.1.1.2	Photoelectric effect	2-4
2.2.1.1.3	Compton effect (incoherent scattering)	2-5
2.2.1.1.4	Pair production	2-8
2.2.1.1.5	Photonuclear reaction	2-8
2.2.1.1.6	Attenuation law, energy transfer and energy deposition	2-9
2.2.1.1.7	Relative predominance of individual effects	2-11
2.2.1.1.8	Photon production	2-12
2.2.1.2	Charged particles	2-14
2.2.1.2.1	Stopping power	2-15
2.2.1.2.1.1	Collisional losses	2-15
2.2.1.2.1.2	Radiative losses	2-17
2.2.1.2.2	Radiative versus collisional losses	2-18
2.2.1.2.3	Scattering of charged particles	2-18
2.2.1.2.4	Range of heavy charged particles	2-19
2.2.1.2.5	Range of electrons	2-20
2.2.1.2.6	Production of charged particles	2-21
2.2.1.3	Absorbed dose D and linear energy transfer (LET)	2-21
2.2.1.4	Photons versus charged particles in medical applications	2-22
2.2.1.5	Neutrons and π -mesons	2-23
2.2.1.6	Interaction modeling in radiation therapy treatment planning	2-24
2.2.1.7	Summary	2-25
2.2.1.8	References for 2.2.1	2-26
2.2.2	Non-Ionizing Radiations (J.H. BERNHARDT)	2-28
2.2.2.1	Introduction	2-28
2.2.2.2	Ultrasound	2-30
2.2.2.2.1	Introduction	2-30
2.2.2.2.2	Physical Characteristics	2-31
2.2.2.2.3	Pulsed mode of operation	2-33

2.2.2.2.4	Medical Applications	2-35
2.2.2.2.5	Acoustic parameters used to describe ultrasound exposure	2-36
2.2.2.2.6	Mechanisms of interaction	2-37
2.2.2.2.6.1	Introduction	2-37
2.2.2.2.6.2	Thermal mechanism	2-38
2.2.2.2.6.3	Non-thermal mechanisms	2-38
2.2.2.2.7	Summary	2-39
2.2.2.3	Static and slowly varying electric and magnetic fields	2-39
2.2.2.3.1	Physical characteristics	2-39
2.2.2.3.2	Natural and anthropogenic sources	2-40
2.2.2.3.3	Interaction mechanisms	2-41
2.2.2.3.4	Summary	2-42
2.2.2.4	Time-varying electric and magnetic fields of frequencies less than 100 kHz	2-43
2.2.2.4.1	Introduction	2-43
2.2.2.4.2	Natural and anthropogenic sources	2-43
2.2.2.4.3	Interaction mechanisms	2-44
2.2.2.4.4	Summary	2-47
2.2.2.5	Electromagnetic fields of frequencies above 100 kHz	2-48
2.2.2.5.1	Physical characteristics	2-48
2.2.2.5.2	Sources of concern	2-50
2.2.2.5.2.1	Technical applications	2-50
2.2.2.5.2.2	Medical applications	2-50
2.2.2.5.2.3	Magnetic Resonance Imaging	2-51
2.2.2.5.2.4	RF ablation, surgery	2-51
2.2.2.5.3	Biophysical interaction mechanisms	2-52
2.2.2.5.4	Summary	2-54
2.2.2.6	Optical Radiation and Lasers	2-54
2.2.2.6.1	Introduction	2-54
2.2.2.6.2	Radiometric terms and units	2-55
2.2.2.6.3	Optical Radiation Sources	2-56
2.2.2.6.4	Mechanisms of interaction	2-58
2.2.2.6.5	Summary	2-59
2.2.2.7	References for 2.2.2	2-59
2.3	Biological Effects	2-63
2.3.1	Biological Effects of Ionizing Radiations (A. KAUL)	2-63
2.3.1.1	Introduction	2-63
2.3.1.2	Deterministic effects	2-64
2.3.1.2.1	Dose response relationships for radiation damage	2-64
2.3.1.2.2	Whole body irradiation	2-64
2.3.1.2.3	Partial body irradiation: Tolerance dose	2-64
2.3.1.2.4	Irradiation in utero	2-65
2.3.1.3	Stochastic effects	2-65
2.3.1.3.1	Cancer induction and development	2-65
2.3.1.3.2	Risk of cancer	2-66
2.3.1.3.3	Dose-response relationships, risk estimation and the radiological concept of limiting the risk	2-66
2.3.1.3.4	Risk of heritable effects	2-67
2.3.1.3.5	Induction of diseases other than cancer	2-67
2.3.1.4	The biological concept of the effective dose	2-67
2.3.1.5	Summary	2-68
2.3.1.6	References for 2.3.1	2-68

2.3.2	Biological Effects of Non-Ionizing Radiations (J.H. BERNHARDT)	2-70
2.3.2.1	Introduction	2-70
2.3.2.2	Ultrasound	2-70
2.3.2.2.1	Introduction	2-70
2.3.2.2.2	Biological effects	2-70
2.3.2.2.3	Recommendations for health protection and safety guidelines	2-72
2.3.2.2.4	Summary	2-73
2.3.2.3	Static and slowly varying electric and magnetic fields	2-74
2.3.2.3.1	Biological effects: experimental and epidemiological data	2-74
2.3.2.3.2	Health risk assessment and exposure guidelines	2-75
2.3.2.3.3	Summary	2-77
2.3.2.4	Time varying electric and magnetic fields of frequencies less than 100 kHz	2-78
2.3.2.4.1	Introduction	2-78
2.3.2.4.2	Biological effects	2-78
2.3.2.4.3	Other effects	2-81
2.3.2.4.4	Cancer	2-81
2.3.2.4.5	Health risk assessment	2-82
2.3.2.4.5.1	Hazard identification	2-82
2.3.2.4.5.2	Exposure assessment	2-83
2.3.2.4.5.3	Exposure-response assessment	2-83
2.3.2.4.5.4	Risk characterization and exposure guidelines	2-84
2.3.2.4.6	Summary	2-85
2.3.2.5	Electromagnetic fields of frequencies above 100 kHz	2-86
2.3.2.5.1	Introduction	2-86
2.3.2.5.2	Biological Effects	2-87
2.3.2.5.3	Risk assessment and exposure guidelines	2-89
2.3.2.5.3.1	Introduction	2-89
2.3.2.5.3.2	Quantifying induced field and SAR	2-90
2.3.2.5.3.3	Basic restrictions and reference levels	2-90
2.3.2.5.4	Summary	2-92
2.3.2.6	Optical radiation and lasers	2-93
2.3.2.6.1	Introduction	2-93
2.3.2.6.2	Biological effects of ultraviolet radiation	2-93
2.3.2.6.2.1	Biologically significant exposure dosimetry	2-93
2.3.2.6.2.2	Biological effects on the skin	2-93
2.3.2.6.2.3	Acute effects on the skin	2-94
2.3.2.6.2.4	Chronic effects on the skin	2-95
2.3.2.6.2.5	Systemic effects	2-96
2.3.2.6.2.6	Effects on the Eye	2-96
2.3.2.6.3	Biological effects of visible and infrared radiation	2-97
2.3.2.6.4	Biological effects of laser radiation	2-98
2.3.2.6.5	Derivation of exposure limits	2-99
2.3.2.6.6	Summary	2-99
2.3.2.7	References for 2.3.2.	2-101

3	Dosimetry in Diagnostic Radiology and Radiotherapy (H.-M. KRAMER, B.M. MOORES, H.-J. SELBACH, F.-E. STIEVE, S. VATNITSKY)	3-1
3.1	Introduction (H.-M. KRAMER)	3-1
3.1.1	References for 3.1	3-2
3.2	Dosimetric Concepts (H.-M. KRAMER)	3-3
3.2.1	Photon radiation	3-3
3.2.1.1	Beam attenuation	3-3
3.2.1.2	Interaction processes	3-5
3.2.1.3	Mass-energy absorption coefficient	3-7
3.2.1.4	Energy dependence of interaction processes	3-7
3.2.1.5	Kerma	3-8
3.2.2	Electron radiation	3-10
3.2.2.1	Energetic electrons	3-10
3.2.2.2	Interaction processes	3-10
3.2.2.3	Cavity theory, Bragg-Gray principle	3-11
3.2.3	References for 3.2	3-13
3.3	Diagnostic Radiology	3-14
3.3.1	Introduction (F.-E. STIEVE, H.-M. KRAMER)	3-14
3.3.2	Dose Quantities (H.-M. KRAMER)	3-15
3.3.3	Characterization of the Radiation Quality (B.M. MOORES, H.-M. KRAMER)	3-17
3.3.4	Dosimetric Equipment for Diagnostic Radiology (B.M. MOORES, F.-E. STIEVE)	3-18
3.3.4.1	Ionization dosimeters	3-18
3.3.4.2	Scintillation dosimeters	3-19
3.3.4.3	Thermoluminescent dosimeters (TLDs)	3-19
3.3.4.4	Kerma-area product meters	3-19
3.3.4.5	Dose-length product meters (B.M. MOORES)	3-20
3.3.5	Measurements in diagnostic radiology (B.M. MOORES, F.-E. STIEVE)	3-20
3.3.5.1	Dosimetry in radiography	3-21
3.3.5.1.1	Direct measurements	3-21
3.3.5.1.2	Indirect measurements	3-22
3.3.5.2	Dosimetry in Fluoroscopy	3-23
3.3.5.3	Dosimetry in Mammography	3-24
3.3.5.3.1	Phantom measurements	3-24
3.3.5.3.2	Patient measurements	3-24
3.3.5.4	Dosimetry in computed tomography	3-24
3.3.5.4.1	Methods of measurement of CTDI	3-25
3.3.5.4.2	Dose length product (DLP)	3-25
3.3.5.4.3	The relevance of CTDI	3-25
3.3.5.5	Dosimetry in Dental Radiography	3-26
3.3.5.5.1	Intra-oral radiography	3-26
3.3.5.5.2	Panoramic tomography	3-27
3.3.5.5.3	Dental CT	3-27
3.3.5.6	Dosimetry for interventional procedures	3-27
3.3.5.6.1	Overall dose to the patient	3-28
3.3.5.6.2	Maximum entrance surface dose	3-28
3.3.6	References for 3.3	3-28

3.4	Radiotherapy (H.-M. KRAMER, H.-J. SELBACH, S. VATNITSKY)	3-32
3.4.1	Introduction (H.-M. KRAMER)	3-32
3.4.2	Dose Quantities (H.-M. KRAMER)	3-32
3.4.2.1	Photon beams	3-33
3.4.2.2	Electron beams	3-34
3.4.2.3	Hadron beams	3-35
3.4.2.4	Brachytherapy	3-35
3.4.3	Dosimetric equipment for radiation therapy (H.-M. KRAMER)	3-36
3.4.4	Dosimetry for teletherapy (H.-M. KRAMER, S. VATNITSKY, H.-J. SELBACH)	3-41
3.4.4.1	Photons and electrons (H.-M. KRAMER)	3-41
3.4.4.1.1	Leakage current	3-41
3.4.4.1.2	Density of air	3-42
3.4.4.1.3	Polarity effect	3-42
3.4.4.1.4	Incomplete charge collection	3-42
3.4.4.1.5	Humidity of air	3-44
3.4.4.1.6	Radiation quality	3-44
3.4.4.1.7	Displacement effect	3-46
3.4.4.1.8	Temperature effects other than the density of air	3-48
3.4.4.2	Non-reference conditions (H.-M. KRAMER)	3-49
3.4.4.3	Kilovolt X-ray beams (H.-M. KRAMER)	3-49
3.4.4.4	Protons and heavier ions (S. VATNITSKY)	3-50
3.4.4.4.1	Introduction	3-50
3.4.4.4.2	Beam delivery techniques	3-50
3.4.4.4.3	Reference dosimetry methods	3-51
3.4.4.4.4	Non-reference conditions	3-52
3.4.4.5	Uncertainties (H.-M. KRAMER)	3-53
3.4.5	Dosimetry for Brachytherapy (H.-J. SELBACH)	3-54
3.4.5.1	Introduction	3-54
3.4.5.2	Brachytherapy sources	3-54
3.4.5.2.1	HDR and PDR sources	3-55
3.4.5.2.2	LDR sources	3-55
3.4.5.2.3	Ophtalmic applicators	3-55
3.4.5.2.4	Electronic X-ray brachytherapy sources	3-56
3.4.5.3	Interstitial brachytherapy	3-56
3.4.5.4	Intracavitary brachytherapy	3-57
3.4.5.5	Endovascular brachytherapy	3-57
3.4.5.6	Afterloading technique	3-57
3.4.5.7	Calibration and traceability	3-58
3.4.5.8	Primary standards	3-58
3.4.5.8.1	Standards for reference air kerma rate	3-58
3.4.5.8.2	Standards for absorbed dose rate to water	3-61
3.4.5.9	Spatial distribution of dose rate	3-62
3.4.5.10	Dose calculation and protocols	3-63
3.4.5.11	Uncertainties	3-64
3.4.6	References for 3.4	3-65

4	Dosimetry in Nuclear Medicine Diagnosis and Therapy	
	(D. NOBKE, S. MATTSSON, L. JOHANSSON)	4-1
4.1	Introduction	4-1
4.1.1	Why dosimetry in nuclear medicine?	4-1
4.1.2	Relation between absorbed dose and biological effect	4-2
4.1.3	Absorbed doses cannot be measured <i>in-vivo</i> .	4-2
4.1.4	Historical background	4-2
4.1.5	References for 4.1	4-4
4.2	Methods for Internal Dosimetry	4-6
4.2.1	General assumptions and definitions. Quantities and units	4-6
4.2.1.1	Organ doses	4-6
4.2.1.2	Effective dose	4-7
4.2.2	Dosimetry systems	4-8
4.2.2.1	MIRD system	4-9
4.2.2.2	ICRP formalism for public and occupational intake	4-9
4.2.2.3	Joint MIRD-ICRP formalism	4-10
4.2.3	Dosimetric models	4-11
4.2.3.1	Anatomical models	4-11
4.2.3.2	Models for bone	4-13
4.2.3.3	Respiratory tract and alimentary tract	4-14
4.2.4	Biokinetic models	4-14
4.2.4.1	General description of biokinetic models	4-15
4.2.4.2	Biokinetic models for the alimentary tract	4-16
4.2.4.4	Systemic models	4-20
4.2.4.5	Excretion models	4-22
4.2.5	Computer programs	4-22
4.2.6	References for 4.2	4-23
4.3	Collection of Biokinetic Data	4-26
4.3.1	Measurements with external probes	4-26
4.3.2	Measurements of samples of blood or excreta	4-27
4.3.3	Whole body counting	4-27
4.3.4	Gamma camera measurements on humans	4-27
4.3.4.1	Conjugate counting	4-29
4.3.4.2	SPECT and SPECT/CT	4-29
4.3.4.3	PET and PET/CT	4-30
4.3.4.4	Measurement, analysis and quality assurance of biokinetic data	4-31
4.3.5	Radiation protection, risk considerations when administering radionuclides to volunteers (non-patients)	4-31
4.3.6	References for 4.3	4-32
4.4	Physical Properties of the Most Important Radionuclides	4-33
4.4.1	Reference for 4.4	4-34
4.5	Doses to Patients in Diagnostics	4-35
4.5.1	Examples of biokinetic models for frequently used radiopharmaceuticals	4-35
4.5.2	List of dose coefficients	4-35
4.5.3	Diagnostic reference levels	4-37
4.5.4	Paediatric patients	4-38
4.5.5	References for 4.5	4-38
4.6	Doses to Patients in Therapy	4-40
4.6.1	Methods for dose estimation	4-40
4.6.2	Radioiodide therapy	4-40
4.6.2.1	Calculations of the absorbed dose to the thyroid at treatment of hyperthyroidism	4-41

4.6.2.2	Dosimetry for treatment of thyroid cancer	4-42
4.6.2.3	Thyroid stunning	4-43
4.6.2.4	Absorbed dose estimations to organs other than the thyroid for radiation protection purposes	4-43
4.6.3	Polycythemia	4-44
4.6.4	Bone palliation	4-44
4.6.5	Monoclonal antibodies and peptide and receptor specific substances	4-45
4.6.5.1	Neuroendocrine tumours	4-45
4.6.5.2	Treatment of liver tumours with microspheres	4-45
4.6.6	Typical doses to tumours and critical organs	4-45
4.6.7	References for 4.6	4-46
4.7	Necessity of Patient-Specific Dose Planning in Radionuclide Therapy	4-50
4.7.1	References for 4.7	4-51
4.8	Dose to Embryo and Foetuses in Diagnostic Nuclear Medicine	4-52
4.8.1	External irradiation from radioactivity in the mother	4-52
4.8.2	Transfer over the placenta barrier	4-52
4.8.3	Phantoms for pregnant women	4-53
4.8.4	Dose coefficients	4-53
4.8.4.1	¹⁸ F-FDG	4-54
4.8.4.2	^{99m} Tc sodium pertechnetate	4-54
4.8.5	Recommendations to decrease dose to foetus	4-55
4.8.6	References for 4.8	4-55
4.9	Doses to Infants From Breastfeeding	4-57
4.9.1	Excretion	4-57
4.9.2	Estimated doses	4-57
4.9.3	Recommendations for interruptions	4-57
4.9.4	References for 4.9	4-59
4.10	Current Trends and Future Developments	4-60
4.10.1	Diagnostic imaging	4-60
4.10.2	Therapy	4-60
4.10.3	References for 4.10	4-61
4.11	Summary and Conclusions	4-62
 5	 Medical Radiological Protection (A. ALMÉN, J. VALENTIN)	 5-1
5.1	Introduction	5-1
5.1.1	Historical flashback	5-1
5.1.2	Why radiological protection is essential	5-2
5.1.3	References for 5.1	5-3
5.2	Conceptual Radiological Protection and International Recommendations	5-4
5.2.1	The basic principles of radiological protection	5-4
5.2.2	Application of radiological protection to medical exposures	5-4
5.2.2.1	Justification of medical exposures	5-5
5.2.2.2	Optimisation of radiological protection for medical exposures	5-5
5.2.3	References for 5.2	5-6
5.3	Applied Radiological Protection	5-7
5.3.1	Management of radiological protection system in the clinic	5-7
5.3.1.1	A Quality Assurance System supports radiological protection	5-7
5.3.1.2	Stakeholder involvement and communication skills are necessary	5-8
5.3.1.3	‘Third parties’: Attention must be paid to others than patients and personnel	5-8

5.3.2	Facilities, equipment, and radiation sources	5-9
5.3.2.1	Specific issues concerning sealed sources.	5-9
5.3.2.2	Planning, verifying, and documenting structural shielding.	5-10
5.3.2.3	Monitoring and classification of work areas	5-12
5.3.3	Occupational exposure.	5-12
5.3.3.1	Occupational doses	5-13
5.3.3.2	Monitoring of occupational dose	5-14
5.3.4	Systems for optimisation and justification	5-15
5.3.4.1	Diagnostic reference levels	5-15
5.3.4.2	Justification of diagnostic examinations	5-16
5.3.5	Diagnostic and interventional radiology	5-17
5.3.5.1	Design of installations and structural shielding in diagnostic radiology.	5-17
5.3.5.2	Optimisation of the protection of the patient in diagnostic radiology.	5-17
5.3.5.3	Special considerations in diagnostic radiology	5-18
5.3.5.3.1	Interventional radiology and fluoroscopically guided procedures	5-18
5.3.5.3.2	Computed tomography (CT)	5-19
5.3.5.3.3	Procedures performed outside the X-ray department	5-19
5.3.5.3.4	Children	5-19
5.3.5.3.5	Pregnant patients	5-20
5.3.5.3.6	Carers and comforters	5-20
5.3.5.4	Protection of personnel and the general public	5-20
5.3.5.4.1	Special considerations: interventional and fluoroscopic procedures.	5-21
5.3.6	Diagnostic and therapeutic nuclear medicine	5-21
5.3.6.1	Designing facilities and structural shielding: special considerations in nuclear medicine.	5-21
5.3.6.1.1	Special considerations concerning waste.	5-22
5.3.6.2	Optimisation of the protection of the patient.	5-23
5.3.6.2.1	Special considerations: children	5-24
5.3.6.2.2	Special considerations: the pregnant patient	5-24
5.3.6.2.3	Special considerations: patients who are breast-feeding.	5-25
5.3.6.2.4	Special consideration: introducing PET/CT and other multi-modal examinations in the clinic.	5-25
5.3.6.2.5	Special consideration: carers and comforters	5-25
5.3.6.3	Protection of the personnel and general public	5-26
5.3.6.3.1	Special consideration: hospitalised patients during treatment.	5-26
5.3.6.3.2	Special consideration: considerations when patients leave the hospital after treatment.	5-27
5.3.6.3.3	Special considerations: death soon after treatment	5-27
5.3.7	Therapeutic radiology	5-28
5.3.7.1	Designing the facilities and structural shielding – special consideration in radiation therapy	5-28
5.3.7.1.1	Special considerations: accident prevention	5-29
5.3.7.2	Optimisation of the protection of the patient.	5-29
5.3.7.2.1	Special considerations: diagnostic procedures	5-30
5.3.7.3	Protection of the personnel and general public	5-30
5.3.7.3.1	Special considerations: discharge of patients after treatment with permanent implants.	5-30
5.3.8	References for 5.3	5-31

5.4 Magnetic Resonance Imaging, Diagnostic Ultrasound (J.H. BERNHARDT) 5-34

5.4.1 Introduction 5-34

5.4.2 Magnetic Resonance Imaging 5-34

5.4.2.1 Protection of patients and volunteers undergoing MR procedures 5-34

5.4.2.1.1 Contraindications and further considerations 5-38

5.4.2.2 Protection of the Personnel and General Public 5-39

5.4.2.2.1 Occupational exposures 5-40

5.4.2.2.2 General public exposures 5-40

5.4.2.2.3 Protective measures 5-41

5.4.3 Diagnostic Ultrasound 5-41

5.4.3.1 Protection of the Patient. 5-41

5.4.3.1.1 Historical perspectives. 5-41

5.4.3.1.2 Equipment output displays. 5-42

5.4.3.1.3 International recommendations and guidelines 5-43

5.4.4 References for 5.4 5-46

5.5 Summary 5-48
