

CONTENTS

PART 1. PROCESSOR DESIGN	1
Chapter 1 Parallel and Associative Processing	2
1.1 INTRODUCTION	2
1.2 PERFORMANCE IN PARALLEL MACHINES	4
1.3 ASSOCIATIVE ARRAY PROCESSORS	6
1.3.1 Associative Memories	7
1.3.2 Bit-serial Working Mode	11
1.3.3 A Bit-serial Associative Processor	13
1.4 INTERCONNECTION NETWORKS IN SIMD SYSTEMS	15
1.4.1 Introduction	15
1.4.2 The Perfect Shuffle	17
Chapter 2 LUCAS System Architecture	27
2.1 SYSTEM OVERVIEW	27
2.2 CONTROL UNIT	32
2.2.1 Overview	32
2.2.2 Instruction Timing	33
2.2.3 Microprogram Sequencer	34
2.2.4 Address Processor	35
2.2.5 Common and Mask Registers	39
2.2.6 I/O Buffer Register	39
2.2.7 Status Register	40
2.3 PARALLEL PROCESSING ARRAY	41
2.3.1 Processing Elements	41
2.3.2 Memory Modules and Input/output Structure	45
2.3.3 Communication Between Elements	46
2.3.4 I/O Processor	50
2.3.5 Physical Description	52
Chapter 3 Basic Instructions	54
3.1 CLASSIFICATION OF INSTRUCTIONS	54

3.1.1 Basic Types of Instructions Operating on the Associative Memory	54
3.1.2 I/O Instructions	58
3.2 MOVES, PERMUTATIONS AND MERGES	60
3.2.1 Introduction	60
3.2.2 Basic Moves	60
3.2.3 Use of the Interconnection Network	61
3.2.4 Automatic Routing	63
3.3 SEARCHES, COMPARISONS AND LOGICAL INSTRUCTIONS	66
3.3.1 Type <field> --> <selector>	66
3.3.2 Type <field,field> --> <selector>	67
3.3.3 Type <constant,field> --> <selector>	67
3.3.4 A More Complex Search	68
3.4 ARITHMETIC INSTRUCTIONS	69
3.4.1 Addition and Subtraction	69
3.4.2 Multiplication	70
3.5 SUMMARY OF EXECUTION TIMES	74
Chapter 4 Comparison with Related Designs	75
4.1 STARAN	75
4.2 DAP	76
4.3 PROPAL 2	77
4.4 Vastor	77
4.5 CLIP4	78
4.6 MPP	78
4.7 CONCLUSION	79
PART 2. PROGRAMMING	80
Chapter 5 LUCAS Microprogramming Language	84
5.1 INTRODUCTION	84
5.2 MICROPROGRAMMER'S VIEW OF LUCAS	87
5.3 INTRODUCTION TO THE LANGUAGE	89
5.4 LANGUAGE ELEMENTS	93
5.4.1 Constants	93
5.4.2 Variables, Assignments	94
5.4.3 Subroutines	95
5.4.4 Microprograms	97

5.4.5 Statements I - Program Flow Control	98
5.4.6 Statements II - Array Operations	102
5.5 PROGRAM EXAMPLES	106
5.6 MICROPROGRAM COMPILER	109
5.6.1 Introduction	109
5.6.2 Intermediate Code	109
5.6.3 Code Improvement	111
Chapter 6 PASCAL/L - A High Level Language for LUCAS	114
6.1 INTRODUCTION	114
6.2 OVERVIEW OF PASCAL/L	117
6.3 LANGUAGE DESCRIPTION	119
6.3.1 Declaration of Data	119
6.3.2 Indexing of Parallel Variables	122
6.3.3 Expressions and Assignments	123
6.3.4 Control Structure	125
6.3.5 Standard Functions and Procedures	127
6.3.6 Microprograms	129
6.4 EXECUTION ON LUCAS	130
6.4.1 Pascal/L Pseudo-machine	130
6.4.2 Parallel Expressions	137
6.4.3 Where Statement	138
6.5 PROGRAMMING EXAMPLES	142
PART 3. APPLICATION STUDIES	145
Chapter 7 Some Well-known Problems Implemented on LUCAS	146
7.1 INTRODUCTION	146
7.2 MATRIX MULTIPLICATION	147
7.2.1 $n \times n$ Matrices, n Processors	147
7.2.2 $n \times n$ Matrices, n^2 Processors	151
7.2.3 $n \times n$ Matrices, More Than n But Fewer Than n^2 Processors	155
7.2.4 $n \times n$ Matrices, More Than n^2 Processors	156
7.3 FAST FOURIER TRANSFORM	158
7.3.1 The Discrete Fourier Transform	158
7.3.2 The Fast Fourier Transform	159
7.3.3 Implementation on LUCAS	162
7.4 THREE GRAPH-THEORETIC PROBLEMS	168

7.4.1 Shortest Path Between Two Given Vertices. Unit Path Length	168
7.4.2 Shortest Path Between all Pairs of Vertices in a Weighted, Directed Graph	171
7.4.3 Minimal Spanning Tree	173
7.4.4 Discussion	177
Chapter 8 LUCAS as a Backend Processor for Relational Database Processing	179
8.1 INTRODUCTION	179
8.2 RELATIONAL ALGEBRA ON LUCAS	181
8.2.1 Introduction	181
8.2.2 Representation of a Relation in the Associative Array	182
8.2.3 Some Basic Operations in the Associative array	185
8.2.4 Internal Algorithms for Algebraic Operations	189
8.2.5 Performance Analysis	198
8.2.6 Comparison of LUCAS with Alternative Designs	207
8.3 INTERNAL QUERY EVALUATION IN A SIMPLE DATABASE COMPUTER	208
8.3.1 Introduction	208
8.3.2 Database	210
8.3.3 Evaluation of a Query	212
8.3.4 Discussion	217
8.4 COMPARATIVE PERFORMANCE EVALUATION OF DATABASE COMPUTERS	217
8.4.1 Introduction	217
8.4.2 Specification of Characteristics of Database Machines	219
8.4.3 Database and Queries	220
8.4.4 Response Times of LUCAS	223
8.4.5 Performance Comparisons	225
8.4.6 Influence of the Size of the Associative Array	227
8.4.7 Conclusions	229
8.5 EXTERNAL EVALUATION OF JOIN	229
8.5.1 Introduction	229
8.5.2 System Description	231
8.5.3 Algorithm and Timing Equations	232
8.5.4 Discussion	235
8.6 CONCLUSIONS	237

Chapter 9	LUCAS as a Dedicated Processor for Image Processing	241
9.1	COMPUTATIONAL DEMANDS IN IMAGE PROCESSING	241
9.2	DIFFERENT ATTEMPTS TO MEET THE DEMANDS	243
9.2.1	Fast Neighbourhood Access	243
9.2.2	A Small Number of Special Purpose Processors	243
9.2.3	A Large Number of Conventional Microprocessors	244
9.2.4	A Very Large Array of Simple Processors	245
9.2.5	LUCAS Compared to Other Machines	245
9.2.6	The Advantages of Image Parallelism	246
9.3	ORGANIZATION OF PROCESSOR ARRAYS FOR IMAGE PROCESSING	247
9.3.1	Introduction	247
9.3.2	Two-dimensionally Organized Arrays	248
9.3.3	Linearly Organized Arrays	248
9.4	IMAGE OPERATIONS ON LUCAS ORGANIZED AS A LINEAR ARRAY OF PROCESSING ELEMENTS	250
9.4.1	Introduction	250
9.4.2	Genuinely Local Operations. Small Neighbourhood Sizes	252
9.4.3	Genuinely Local Operations. Larger Neighbourhood Sizes	262
9.4.4	Semi-local Operations	265
9.4.5	Measurements	273
9.4.6	Global Transforms	277
9.4.7	Input/output	278
9.4.8	Larger Images	278
9.4.9	Comparison of Execution Times	280
9.5	CONCLUSIONS	283
PART 4.	EPILOGUE	284
Chapter 10.	CONCLUSIONS AND CONTINUED RESEARCH	285
10.1	GENERAL	285
10.2	A PROPOSAL FOR A MORE POWERFUL PE ARCHITECTURE	286
10.2.1	The New Design	286
10.2.2	Execution Times with the New Design	291
10.3	VLSI IMPLEMENTATION OF THE PROCESSOR ARRAY	292
10.3.1	Off-chip Memory	293
10.3.2	On-chip Memory	296
10.3.3	No Interconnection Network	296

10.4 FINAL WORDS	297
Appendix 1. ALU Functions	298
Appendix 2. LUCAS Microprogramming Language	301
Appendix 3. Pascal/L - Syntax in BNF	309
References	312
